DISSERTATION
ON THE
Nature and Character
OF THE
CHINESE SYSTEM OF WRITING,
IN A LETTER TO JOHN VAUGHAN, ESQ.

By PETER S. DU PONCEAU, LL.D.,
President of the American Philosophical Society, of the Historical Society of Pennsylvania, and of the Athenaeum of Philadelphia; Corresponding Member of the Institute of France, &c. &c.

TO WHICH ARE SUBJOINED,
A VOCABULARY OF THE COCHINCHINESE LANGUAGE,

By FATHER JOSEPH MORRONE,
R. C. Missionary at Saigon,

WITH REFERENCES TO PLATES, CONTAINING THE CHARACTERS BELONGING TO EACH WORD, AND WITH NOTES, SHOWING THE DEGREE OF AFFINITY EXISTING BETWEEN THE CHINESE AND COCHINCHINESE LANGUAGES, AND THE USE THEY RESPECTIVELY MAKE OF THEIR COMMON SYSTEM OF WRITING,

By M. DE LA PALUN,
Late Consul of France at Richmond, in Virginia;

AND
A COCHINCHINESE AND LATIN DICTIONARY,
IN USE AMONG THE R. C. MISSIONS IN COCHINCHINA.

PUBLISHED BY ORDER OF THE AMERICAN PHILOSOPHICAL SOCIETY, BY THEIR HISTORICAL AND LITERARY COMMITTEE.

PHILADELPHIA:
PUBLISHED FOR THE AMERICAN PHILOSOPHICAL SOCIETY,
BY M'CARTY AND DAVIS, 171 MARKET STREET.
1838.
OFFICERS

OF THE

AMERICAN PHILOSOPHICAL SOCIETY,

FOR THE YEAR 1838.

PATRON,
His Excellency the Governor of the State.

PRESIDENT,
Peter S. Du Ponceau.

VICE PRESIDENTS,
Nathaniel Chapman, R. M. Patterson.
Joseph Hopkinson,

SECRETARIES,
Franklin Bache, Alexander D. Bache,
John K. Kane, J. Francis Fisher.

COUNSELLORS, ELECTED FOR THREE YEARS.

In 1836,
William Short,
George Ord,
William H. Keating,
Clement C. Biddle.

In 1837,
Nicholas Biddle,
James Mease,
Thomas Biddle,
Gouverneur Emerson.

In 1838,
Robert Hare,
William Hembel, jun.
Charles D. Meigs,
William Meredith.

CURATORS,

William Tilghman,
Caspar Wistar.
A LIST

OF THE

PRESIDENTS OF THE AMERICAN PHILOSOPHICAL SOCIETY,

HELD AT PHILADELPHIA,

FOR PROMOTING USEFUL KNOWLEDGE.

Benjamin Franklin, elected 2d January, 1769; died 17th April, 1790.

David Rittenhouse, elected 7th January, 1791; died 26th June, 1796.

Thomas Jefferson, elected 6th January, 1797; resigned in January, 1815; died 4th July, 1826.

Caspar Wistar, elected 6th January, 1815; died 22d January, 1818.

Robert Patterson, elected 1st January, 1819; died 22d July, 1824.

William Tilghman, elected 7th January, 1825; died 29th April, 1827.

Peter S. Du Ponceau, elected 4th January, 1828.
INTRODUCTION.
INTRODUCTION.

It is a just and true remark of the Rev. M. Gutzlaff, that "nothing has so much puzzled the learned world in Europe as the Chinese language."* We need not go very far to find out the cause of this embarrassment. It is produced, like many other difficulties that occur in almost every science, by the abuse of words, by the use of metaphors instead of plain intelligible language, and by looking beyond nature for the explanation of her most simple operations.

The learned writer above cited does not tell us what he means by the words "the Chinese language." If he meant the spoken idiom, (as it is affected to be called,) there does not appear any difficulty or cause of embarrassment. The Chinese language (properly so called) is a simple idiom, and, peculiarly the Kou-wen, or ancient language, essentially elliptical; its words are monosyllabic, and its syntax chiefly consists in the juxtaposition of those words, aided by a certain number of particles, which stand in the place of our grammatical forms and inflexions. A great number of those words are homophones, but they are distinguished by accents and tones; and, upon the whole, the people who speak this language find no difficulty in understanding each other. It is perhaps more elliptical than any other; more is understood by it than is actually expressed; but no difficulty arises from it. Ideas and perceptions are awakened by the Chinese monosyllables, as well as by

* Post, p. 15.
those grammatical forms which may be called the luxury of our idioms.

Here, then, is nothing that can puzzle the philologists of Europe. But if, by the Chinese language, the learned author meant the written characters, (and in that sense only I can understand him,) he says what is unfortunately too true; and by the use which he makes of the word language, he shows that he has not yet discovered the true cause of the embarrassment which he very properly notices, and which must strike every one who has attended to the subject.

The Chinese characters do not, more than any other graphic system, constitute a language in the proper sense of the word. Metaphorically, indeed, they may be so called, and so may the groups formed by the letters of our alphabets. We do not read by letters; we read by groups of those little signs, representing words and sentences. No one, who is not in his A B C, will spell a word when he reads, or even think of the sounds of its component figures. This is so true, that there are words, such as the word awe, in which not a single one of the sounds attached to the three letters that compose it, is heard when it is read. In the word ought, none is heard but that of the letter t. Our eye catches the group, and our mind the sound and sense of the written word, all at the same moment; it does not stop to take notice of each letter; the physical and mental processes are performed at the same instant, with the rapidity of thought, which is exceeded by nothing that we can form an idea of. These groups, therefore, might also receive the name of ideographic signs or characters, and their aggregate and various combinations might be called a written language. But every one will understand that this word, so applied, would only be metaphorical.

To apply these principles to the Chinese system of writing, is the object of the following dissertation. All those
(I believe I may say almost without exception*) who have written on the subject, have represented the writing of the Chinese as a separate, independent language, unconnected with the sounds of the human voice, and consequently with speech; a language acting *vi propriè*, and presenting ideas to the mind directly through the eye, without passing through the mental ear, in which it is said to differ from our alphabetical system. Hence it has been called *ideographic*, and the language properly so called, the *oral* language, is represented as nothing more than the pronunciation of that which has usurped its name and its place.

In proof of these assertions, it is said that the Chinese writing is read and understood by nations who cannot speak or understand one word of the spoken idiom, but who make use of the same characters. How far this is founded in truth, the subjoined vocabularies of the Cochinchinese language, which employs in its writing the Chinese characters, will, I think, sufficiently show. However it may be, it will not affect the principles on which I intend to demonstrate that the Chinese graphic system is founded; nor will it in the least support its pretended extraordinary, and I might say almost miraculous properties.

I endeavour to prove, by the following dissertation, that the Chinese characters represent the *words* of the Chinese language, and ideas only through them. The letters of our alphabet separately represent sounds to which no meaning is attached, and are therefore only the elements of our graphic system; but, when combined together in groups, they represent the words of our languages, and those words represent or recall ideas to the mind of the reader. I contend that the Chinese characters, though formed of different

---

* Dr. Morrison is the writer who has said the least upon the subject. He has been more cautious than his brother sinologists. He does not, however, contradict the opinion that is generally received.
elements, do no more, and that they represent ideas no otherwise than as connected with the words in which language has clothed them, and therefore that they are connected with sounds, not indeed as the letters of our alphabet separately taken, but as the groups formed by them when joined together in the form of words.

There are two species of what are called alphabets, among the different nations who inhabit the earth; the one is syllabic, and the other I would call elementary. Each character of the first represents a syllable, generally unconnected with sense or meaning. This system has been adopted by those nations whose languages consist of a small number of syllables; such as the Cherokee, which has only eighty-five, and the Japanese, that has no more than forty-seven, with an equal number of characters to represent them. These characters are few, and may be easily retained in the memory; it has not, therefore, been thought necessary to carry analysis farther. Syllabic alphabets, besides, have considerable advantages over those that we make use of; they do not require spelling, and a great deal of time is saved in learning to read. The process of writing is also quicker, and the writing itself occupies less space.

But those nations whose languages will not admit of a syllabic alphabet, on account of the too great number of their consonants, are obliged to proceed further in their analysis of sounds; and, having discovered that the number of the primary elements of speech, which we call letters, is comparatively very small, they have adopted the system which prevails in Europe and Western Asia, and which we also call alphabetical, though we have properly no name to distinguish it from the syllabic.

The Chinese, when they invented their system of writing, found themselves possessed of a language composed entirely of monosyllables, each of which was a word of the idiom,
so that they could, by the same character, recall a word and a syllable at the same time. They also found that each of those words represented an object or an idea, so that they could present to the mind through the eye, at the same moment, a syllable, a word, and an idea. It is no wonder, therefore, that they did not look further, and that their first endeavour was to affix a sign to each word, by means of which they would recall the idea at the same time. But the idea was only to them a secondary object; it was attached to the word, and could not be separated from it.

All savage nations, in their first attempts to communicate with each other by writing, have begun with rude pictures or delineations of visible objects. The original forms of a number of their characters show, that the Chinese began in the same manner. But that could not carry them very far; yet it may have served their purpose while civilization had not made much progress among them. Afterwards they tried metaphors, which they probably found of very limited use. At last, as they advanced in knowledge and civilization, they fell upon a system, which they have preserved during a period of four thousand years, and with which they appear to be perfectly satisfied. It is to that system that philologists have given the name of ideographic writing.

In forming this system, they invented a certain number of what I should call primary signs, which they applied to an equal number of words. Some of those signs were abridged forms of their original pictures and metaphors, but so altered as to be no longer recognised. The number of those primary or simple characters is not known; it is to be presumed that it was not greater than could be easily retained in the memory. The Chinese grammarians, under the name of keys or radicals, have reduced them to the number of two hundred and fourteen; but of these several are compounded, so that the number was probably still smaller. Be that as it may, two hundred words, more or
less, having signs or characters to represent them, by join-
ing two, three, or more of them together, and using them as
catch words to lead to one that had no sign to represent it,
could produce an immense number of combinations; and
a still greater one by joining to these, and combining with
them, the new compounds; and so they might proceed in
the same manner ad infinitum. By means of that system,
with some modifications, the Chinese succeeded in represent-
ing all the words in their language. The ideas were only
an ingredient in the method which they adopted, but it was
by no means their object to present them to the mind un-
accompanied by the word which was their model, and
which, if I may use a bold metaphor, sat to them for its
picture; a picture, indeed, which bore no resemblance to
the object, but which was sufficient to recall it to the me-

From this general view of the Chinese system of writing,
it is evident that the object of its inventors was to recall to
the mind, by visible signs, the words of which their language
was composed, and not to represent ideas independent of
the sounds of that language. But the number of those
words being too great to admit of merely arbitrary signs,
the forms of which could not easily be retained without
some classification to help the memory, they thought of
some mode of recalling at the same time something of the
meaning of each word, and that was done by combining
together the signs of several of them, so as to make a kind
of definition, far, indeed, from being perfect, but sufficient
for the purpose for which it was intended. And that is
what the Chinese literati, and the sinologists after them,
have been pleased to call ideographic writing; while, instead
of ideas, it only represents words, by means of the combi-
nation of other words, and therefore I have called it lexi-

To make this still clearer, I shall add here the explana-
tion given by the Chinese themselves of their system of writing, for which we are indebted to Dr. Morrison, in his Dictionary, and M. Abel Remusat, in his Grammar of the Chinese language.* I believe it will fully confirm the representation that I have made of it.

The Chinese divide their characters into six classes, which division they call Lou-chou according to Remusat, and Luh-shoo according to Morrison's orthography. As these two writers do not agree as to the order in which these classes are placed, I avail myself of the same privilege, and place them in such order as I think best calculated to give a clear idea of the whole. The three first relate to the external forms of the characters, and the three last to the manner in which they are employed, in order to produce the effect required. We shall now examine them separately.

I. The Siang-hing, (R.) or Hing-seang, (M.) M. Remusat calls these characters figurative, as representing as much as possible the forms of visible objects. Thus the sun is represented by a circle, with a dot in the middle; the moon by a crescent; a man, a horse, a dog, the eye, the ear, &c. by linear figures, representing or attempting to represent the different objects, the names of which they recall to memory. The Chinese writers, says Dr. Morrison, assert that originally those figurative characters composed nine-tenths of their alphabet, which is difficult to believe, unless the alphabet itself is very limited; but the Doctor adds that they give but very few examples of them, which is much more credible.

Be that as it may, those characters, if ever they existed to any considerable extent, have long ceased to be in use. The Chinese themselves admit it; and the reason they give

for it, according to Dr. Morrison, is, that "they were abbreviated for the sake of convenience, and added to for the sake of appearance, so that the original form was gradually lost;" no trace of it now remains. The characters, as they are at present formed, present nothing to the eye but linear and angular figures, quite as insignificant as the letters of our alphabet, otherwise than by being connected with the words of the language as those are with its elementary sounds, and when grouped together with the words themselves. Therefore, as they now appear, those signs can in no manner be called ideographic.

II. The Tchi-sse, (R.) or Che-khe-sze, (M.) M. Remusat calls them indicative. They are an attempt to recall, by figures, ideas that have no figure. Thus the numerals one, two, three, are represented by horizontal lines, as in the Roman arithmetical characters they are by vertical ones; the words above and below, are represented by short vertical lines above or below horizontal ones; and the word or the idea of middle, by an oblong square, with a vertical line passing through the middle of it. It is evident that there can be but few such characters; I have seen none cited, except those above mentioned. Whatever may be said of them, there are not enough to characterize a system.

III. The Tchouan-tchu, (R.) or Chuen-choo, (M.) M. Remusat calls them inverted. They are an attempt to represent things by their contraries. Thus a character representing a fork, with three prongs and a crooked handle, the prongs turned towards the right, stands for the word left, and for the word right, if the prongs are turned the other way. M. Remusat quotes four others, intended to represent the words standing, lying, man, and corpse: but in my opinion they represent nothing to the mind through the eye, and they must be absolutely guessed at. M. Remusat says
that their number is very small, (très peu considérable,) and it is easy to conceive why it should be so.

These three first classes of characters are the only ones, the ideographic nature of which is said to be inherent to their external form. It has been seen that the first has long been entirely out of use, and is now superseded by arbitrary signs, which have no connexion with ideas, except by recalling to the mind the words by which the ideas are expressed. The two others, ingenious as they are, are too few, and too vague and uncertain in their expression, to give a name, much less a descriptive character to the Chinese system of writing. We shall now pass to the three other classes, which have nothing to do with the external form of the characters.

IV. The Kia-tsei, (R.) or Kea-tsey, (M.) which in the Chinese language signifies borrowed. M. Remusat defines it thus:* "To express abstract ideas, or acts of the understanding, they (the Chinese) have altered the sense of those simple or compound characters which represent material objects, or they have made of a substantive the sign of a verb, which expresses the corresponding action. Thus the heart represents the mind; a house is taken for man; a hall for woman; a hand for an artificer or mechanic, &c." Unfortunately for this theory, the sense of the characters (as corresponding with the words) has not been in the least altered; it is the sense of the words that has been changed, and the characters have followed. In the Chinese spoken language, a sailor is called a ship-hand, a monk a reason-house, or house of reason, &c., and the writing only applies the appropriate character to each of these words. The language is full of similar metaphors: east-west signifies a thing or something; elder brother with younger brother, signify simply brother, without distinction of age, &c.†

The writing does no more than represent these words by the characters appropriated to each; the metaphor is in the language, not in the writing.

Dr. Marshman* wonders that he has never seen a Chinese treatise on the grammar of the spoken idiom. The reason is obvious. The Chinese affect to ascribe every thing to their system of writing, which they would have us believe to be an admirable philosophical invention, independent of, and unconnected with the language, which they consider only as the oral expression of the characters, while the reverse is the exact truth. That a vain, ignorant nation should entertain such notions, is not at all to be wondered at; but that grave and learned European philologists should adopt them without reflection, is truly astonishing. The reader will see in the following dissertation, what strange opinions have been entertained on this subject, by men of the most profound knowledge and the most eminent talents.

There is nothing, therefore, in these borrowed characters, as they are called, that entitles them to form a class in the Chinese system of writing. They are, like all the others, but the representatives of certain words.

M. Remusat includes in this class the character representing the verb to follow, which, he says, is formed by the images of three men placed behind one another. I shall not inquire how distinctly these images are to be seen in the character suy, to follow.† It seems to be one of the old obsolete metaphors. This is what M. Remusat calls changing substantives into verbs, and it is the only example of it that he produces.

V. The Hoê-i, (R.) or Hwuy-e, (M.) This class and the following appear to me to embrace the whole graphic sys-

* Clavis Sinica, p. 185.
† Morrison's Anglo-Chin. Dict. verbo follow.
tern of the Chinese. The first class (so called) is interesting only to antiquaries, the second and third relate only to the form of a few characters, and the fourth has been shown to be fallacious. These two last, therefore, claim our principal attention. I shall attend, in the first place, to the fifth class.

This class is formed of a combination of two or more characters, each of which represents a word, to represent another word of the language. M. Remusat calls it combined. Dr. Morrison, in his Chinese Dictionary, in which the words are classed in the order of our alphabet, explains Hwuy-e (No. 4560) to mean "association of ideas in compounding the characters." The learned Doctor here, it seems, merely translates a Chinese definition of that word. We take the liberty to define it thus: "The association or combining of several words in their appropriate characters to represent another word." Thus we combine the letters of our alphabet to give them a meaning which, separately, they have not. The Chinese combine their significant characters to give to the groups thus formed a meaning which none of them possess separately. The meaning is in the words to which the characters are applied, and that meaning they only hint at by the association of other words represented by their appropriate signs.

M. Remusat gives us six examples of these combinations. They are the word light, represented by the words sun and moon, placed next to each other; the word hermit, by man and mountain; song, by bird and mouth; wife, by woman, hand and broom; the verb to hear, or hearing, by ear and door; and the substantive tear, by the words eye and water. All these words are, of course, represented by their signs, which bear no resemblance to the objects signified, whatever they might originally have done.

The characters are sometimes placed above, below, or by the side of each other, in their separate forms. Sometimes
they are joined together with various alterations, so as to form but one character, in which last case they are not always easy to be recognised. Two hundred and fourteen of them, of which a few are compounds, but the rest simple characters, have been selected for the sake of method, and called roots or keys. They serve in the dictionaries to class the words by their analogies: every word is placed under some one or other of them. This concerns only the method or arrangement of the alphabet, but is no part of the system of writing, except so far, that a certain number of simple characters was indispensably required to form the basis of a combination system, which otherwise would have been impossible.

It results from the above, that the graphic system of the Chinese, generally considered, consists in this:

1. A certain number of arbitrary signs (say two hundred) to represent an equal number of words, which may be called the nucleus or foundation of the whole.

2. An indefinite number of characters to represent all the other words of the language, which characters are formed by the combination of those primitives with each other, and with the new characters formed by that process also combined together, so as to have a distinct letter, character or sign for every word in the language. The separate meaning of the words thus combined, or the ideas, as the Chinese express it, are only an auxiliary means to aid in the recollection of the word to which is attached the idea which is to be conveyed. It very often happens that those combinations are mere enigmas, and present no definite idea to the mind, and sometimes one entirely contrary to its object; but they serve the purpose, precisely as our groups of letters when they represent different sounds from those attached to the separate characters.

I have explained this system more fully in the following dissertation, to which I must refer the reader.
VI. The Hing-ching, (R.) or Hae-shing, (M.) Although words expressive of moral sentiments, of actions and passions, and of numerous visible objects, may be represented or recalled to the memory by combining and placing together other words, which, by their signification, may serve as definitions or descriptions, or rather as catch words, to lead by their meaning to the recollection of the one intended to be represented,—it is very difficult, when there are a great number of objects of the same kind, all of which have specific names, but whose differences cannot be explained or even guessed at by the aid of a few words. Such are trees, plants, herbs, fruits, birds, fishes, and a great number of other things. Here the system of catch words could not be applied; and the Chinese invented this class, or rather this special combination of characters, to represent those kinds of specific names.

A certain number of characters, all, in their common acceptation, representing words of the language, are set apart to be used with regard only to their sounds, independent of their meaning; and, joined to the character which represents the name of the genus, they indicate the sound of the name of the species to be represented. Thus, if the name of an apple be ping, though that monosyllable may signify twenty other things, each of which has an appropriate character, any one of those characters, simple or compound, provided it be within the selected list, joined to the word fruit, or the word tree, signifies either an apple or an apple-tree, as the case may be. This class of characters the Chinese admit to be phonetic, or representative of sound, but they deny it as to all the rest, because they ascribe to the character the sense which is attached to the significant syllable, and which the written sign only reflects.

The Chinese have other modes of employing their characters to represent the sounds of words or proper names.
of foreign origin; but they are not included in the above six classes. They are fully explained in the following Dissertation, in which I have endeavoured to prove that the Chinese system of writing is essentially phonetic, because the characters represent words, and words are sounds; and because, if not connected with those sounds, they would present to the mind no idea whatever.

The Chinese characters have been frequently compared to our arithmetical figures, and to the various signs employed in algebra, pharmacy, &c., and therefore they have been called *ideographic*, or representative of *ideas*. The comparison is just in some respects; because ideas being connected with the words of the language, and those characters representing words, they may be said at the same time to represent the ideas connected with them. But the comparison does not hold any further. The numerical figures express ideas which in every language are expressed by words having the same meaning, and though their sounds be different, the idea is the same; the other signs are abbreviations, applied to particular sciences, and understood only by those who are learned in them. There is no doubt that if all languages were formed on the same model, and if every word in all of them expressed with precision the same idea, and if they were all formed exactly like the Chinese, the Chinese characters might be applied to all in the same manner as our numerical figures; but that not being the case, those characters are necessarily applied to a particular language, and therefore, their object not being to represent ideas independently, but at second hand, through the words of that particular idiom, they are not entitled to the name of *ideographic*, which has been inadvertently given to them.

If this theory be found consistent with reason and sound sense, there will result from it a clear and natural classification of the systems of writing now known to exist on the
face of the earth. The elements of language are words, syllables, and the simple sounds represented by the letters of our alphabets. Those three elements are all produced by the vocal organs; and, as all writing is made to be read by all who understand the language to which it belongs, and to be read aloud as well as mentally by all in the same words, and in the same order of words, it seems clear that the written signs must represent or recall to the mind some one or other of those three elements; and hence we have three graphic systems, distinct from each other, but formed on the same general principle—the elementary or alphabetic, the characters of which, called letters, represent singly the primary elements of speech, which are simple sounds; the syllabic, that represents syllables which, for the most part, have no sense or meaning, but only serve as elements in the composition of polysyllabic words; and lastly, the lexigraphic, which, by means of simple or combined signs, represent the words of a language in their entirety; and this last mode seems to be more particularly applicable to monosyllabic languages, in which every syllable has a sense or meaning connected with it, which supplies a method for the formation of the characters, the multiplicity of which otherwise might create confusion. Nothing deserves to be called writing which does not come within some one or another of these three classes. It might be otherwise, if all men were born deaf and dumb; but since the habit of speaking, acquired in their infancy, has given body and form to their ideas, every thing which is not a representation of those forms, can, in my opinion, only be considered as an abortive attempt to make visible supply the place of audible signs, which may have served some limited purposes, but never deserved to be called writing. In the following dissertation I have considered in this point of view the hieroglyphics of ancient Egypt, and the paintings of the Mexicans. I will not anticipate here what I have said on those
subjects. The result is, that an ideographic system of writing is a creature of the imagination, and that it cannot possibly exist concurrently with a language of audible sounds.

Another object of this publication is, to discover what ground there is for the popular notion that several nations, entirely ignorant of each other's oral language, communicate with each other in writing by means of the Chinese characters. As it regards nations whose languages, like the Japanese, are polysyllabic, and have inflections and grammatical forms, I think I have sufficiently proved that it is impossible that they should understand the Chinese writing, unless they have learned the Chinese language, though they may not be in the habit of speaking it. But it may be otherwise with respect to those nations whose languages are monosyllabic, and formed on the same model with the Chinese, and who have adopted the same system of writing. It cannot be denied, that to a certain extent, that is to say, as far as words, having the same meaning in both languages, are represented by the same characters, they may so far, but no farther, communicate with each other in writing. How far that can be the case, can only be shown by a comparison of their languages, and of the manner in which they make use of their written signs. For this purpose, I wish we had a more extensive vocabulary than the one here presented, which contains only three hundred and thirty-three Cochinchinese words, with their corresponding signs; but I hope it will be followed by others more copious and complete. It is much to be regretted that the English East India Company declined publishing the Dictionary offered to them by the Vicar Apostolic of Cochinchina, which probably was that composed by the venerable Bishop of Adran.* I am not, however, disposed

* See post, p. 101.
to blame them for this refusal. It is well known that that illustrious body is not deficient in liberality, and that they have expended very large sums* in the publication of Dr. Morrison's excellent Chinese dictionaries, for which science will ever owe them a debt of gratitude; it is not astonishing, therefore, that they should not be willing, at least for the present, to incur farther expense. But we must not despair of seeing the book published; there are Asiatic societies at Paris and London, under whose auspices many valuable philological works have been brought to light; and there is no reason to suppose that they will not still pursue that meritorious course. It would be worthy of them to republish the Anamitic grammar of Father de Rhodes.f It seems now well ascertained, that the language of Tonquin and that of Cochinchina are nearly if not entirely the same; and with that book, and the two vocabularies here published, a pretty clear idea might be formed of the nature and character of the Anamitic dialects.f But to return to our question.

On examining Father Morrone's Vocabulary, here subjoined, (No. II.) it cannot but be observed, that in adopting the Chinese alphabet, the Cochinichinese appear frequently

* M. Remusat understood, in 1822, that the publication of Dr. Morrison's Dictionary would cost £10,000 sterling. (Mélanges Asiatiques, vol. ii. p. 25.) The Doctor published several dictionaries, and other valuable works, so that the whole must have cost a great deal more.

† See p. 87.

‡ There seems to be very little difference between the Anamitic spoken in Tonquin and that of Cochinchina. In Father Morrone's Vocabulary we find the word troi for heaven, while M. Kraproth gives us bloi in Tonquin for the same word. Thus he gives us blang for moon, while in the Cochinichinese Vocabulary it is trang. But the Dictionary which follows gives us troi and bloi, and trang and blang, as synonymous words. So that the Tonquinese words appear to be also in use in Cochinchina. Whether the reverse also takes place, we do not know. After all, there seems to be but a trifling difference of pronunciation between them.
to have paid more attention to the sound than to the meaning of the Chinese words to which the characters belong. Thus the character san, (Plate No. 14) which in Chinese means *drizzling rain*, is applied in Cochinchinese to the word *sam*, thunder; the character *chouang*, white frost, (19) to *suong*, the dew; *ko*, a lance, (37) to *qua*, yesterday; *kin*, metal, (232) to *kirn*, a needle; *po*, to bring a ship to shore, (236) to *bac*, silver; *tchy*, fetters, (227) to *choi*, a broom,— and many others of the same kind. It shows how natural it is to consider written characters as representative of sound.*

This, I am well aware will hardly be credited by those sinologists who consider ideas to be inseparably inherent in the Chinese characters. The learned M. Jacquet, to whom I communicated some of these examples, appears disposed to consider those anomalies as resulting from the addition or subtraction of some strokes in the running hand of the Cochinchinese, so that the characters might always be found to be bad imitations of some which have in Chinese the same meaning as in Cochinchinese; he, however, can-

* We are informed by M. Remusat, (Mélanges Asiat. vol. ii. p. 98,) that even among the Chinese many homophonous characters, though different in their meaning, are employed one for the other, and pass for various forms of the same character; which, he says, occasions much confusion in reading. This is in printed books. Elsewhere, the same writer tells us that the merchants and mechanics of China, in their ordinary writing, employ but one character to represent all the words of their language that have the same sound. (See post, p. 64.) Can there be stronger proof that those characters are considered by the Chinese themselves as *phonetic*, and that in their common writings they often attend more to the sound than to the sense?

The Chinese literati have multiplied their characters to the immense number which they at present exhibit from motives not difficult to be guessed at. When science is connected with political power it must have its *arcana*, to keep it beyond the reach of the common people. The same thing happened in ancient Egypt; the priests tried to involve their graphic system in mysteries, but necessity compelled the people to simplify it.
didly acknowledges "que c'est plutôt trancher la difficulté que la résoudre," in which I entirely agree with him. At the same time I must say, that the specimens I sent him were too few to enable him to form a decided opinion, and that he pointed out among them some affinities which have escaped our friendly annotator, M. de la Palun; as, for instance, that the character thanh, (Plate No. 86) which in Cochinianese means a city, has the same meaning in Chinese, though it also signifies walls.* He has moreover observed, that the character ben, (89) which in Cochinianese means la partie du nord, de l'est, &c., is the same with the Chinese pien or pian, latus, ora, terminus, (De Guignes, No. 11,169.) But these few observations, however just they appear, do not solve the question before us. Independent of those characters which I cannot consider otherwise than as expressive of the Cochinianese sounds, without regard to the meaning which they have in China, it is evident that there are many others, which, though Chinese in their origin, are combined together in a manner peculiar to the Cochinianese language; so that, upon the whole, I cannot resist the conviction that forces itself upon me, that the inhabitants of Anam cannot read Chinese books, or converse in writing with others than their countrymen by means of the Chinese characters, except to a very limited extent, unless they have made a special study of those characters as applied to a different language than their own; or, in other words, unless they have learned Chinese.

The Cochinianese themselves make a distinction between the Chinese characters and their own. They call the former Chu nho, and the latter Chu nom. These the authors of the Cochinianese and Latin Dictionary (No. III.) define thus: "Litteræ Annamaticæ ad exprimendas vulgares voces, seu

* In Cochinianese, the word thanh, a city, signifies also walls. See the Dictionary, hoc verbo, p. 346.
ad referenda Annamitica verba.”* Like the Italians, and as was common through all Europe some centuries ago, they call their language the vulgar tongue, (lingua vulgaris)† which implies that the Chinese to them, as the Latin to us, is the learned or the classical language. They call the characters, it is true, “Sinico-annamitici,” but I understand them to mean the system of writing, which in both countries is the same, though the characters frequently differ in their application or in their forms. A scholar with them must be skilled in the Chinese and in the Anamitic.‡ It is no wonder, therefore, that men who have been taught in that manner can understand each other without speaking. As the characters in both languages are lexigraphic, each being the representative of a word, it is not perhaps so necessary that they should remember the Chinese sounds, particularly as the two languages appear formed on the same grammatical system, though it appears to me that the Cochinchinese is more elliptical than the Chinese, as I do not find in it the connecting particles of the Kwan-hoa, or modern Chinese. But of these details I do not find myself competent to speak. I submit them to the investigation of the learned.

I had adopted, without sufficient reflection, the popular opinion that the Cochinchinese (spoken) language was a dialect of the Chinese; but, on further examination, it does not appear to me to be the case. By far the greatest number of the Cochinchinese words appear to differ entirely from the Chinese. In the numerals particularly, which in the Indo-European, and in the Oceanic languages, show so great an affinity between the different idioms, there is none to be observed when compared with those of the language of China. In the Dictionary (No. III.) a very few words

* See Dict. post, p. 311, verbo nho, and p. 314, verbo nom.
† Ibid.
‡ Ibid.
are said to be "Vox Sinico-annamitica," and, as far as I can judge by the means of comparison within my reach, it rather appears to me that those two languages are not derived from each other. M. Klaproth, in his Asia Polyglotta,* has given us a tabular view of one hundred and forty-eight Chinese and Anamitic words. Out of this number thirty-nine only show more or less affinity between the two languages. To thirty-three out of the remaining one hundred and nine he has joined in italics the Chinese to the Anamitic word, as if both were in use in the Anamitic countries, which may possibly be the case, in consequence of the great intercourse that exists between the two nations; but those Sinico-anamitic words, if they are really in use, do not belong to the original language, and therefore cannot be cited as proofs of affinity between the two idioms. This is another subject, in my opinion, well deserving investigation. The comparative study of languages has hitherto been confined to polysyllabic idioms. The monosyllabic languages of Asia offer, perhaps, a no less interesting object to the lovers of that science.

I think proper to mention here, that somewhere in the following Dissertation† I have expressed a doubt of the correctness of Captain Beechy's opinion that the language of the Loo-choo Islands is polysyllabic, and a dialect of the Japanese. Further examination has satisfied me that that gentleman had good grounds for advancing that opinion, and it is with great pleasure I take this opportunity of doing him the justice to which he is entitled. At the same time it is right that I should observe, that this admission does not in the least militate against the principles which I have laid down; and that if the Loo-chooans, as appears probable, speak a polysyllabic Japanese dialect, they do not apply the Chinese characters to it otherwise than the Japanese

* Page 368.  † Page 96.
themselves. On this subject I must refer the reader to what I have said in my Dissertation, and in my letter to Captain Basil Hall,* where I think I have sufficiently proved that the Japanese do not make use of the Chinese characters to represent the words, but only the syllables of their vernacular language; and there is no reason to suppose that the Loo-chooans have done otherwise. If, therefore, they can read and understand the Chinese writing, it appears to me that no reason can be given for it than that they have learned that language, as is done by so many other nations who have adopted the religion, the manners, and the literature of the celestial empire.

Thus much, I have thought proper to say, by way of introduction to the Dissertation which immediately follows, in order to prepare the reader for the further developments that it contains. I have taken this opportunity to present some views of the general subject, which either were omitted in my letter to Mr. Vaughan for brevity's sake, or which did not occur to me at the time. I have done the same in the Preface to Father Morrone's Vocabulary. I hope the reader will excuse this defect in point of method, which should not have taken place if I had not, as I proceeded, found a wider field than I had at first contemplated, and if I had not been afraid of extending my Dissertation to too great a length, not leaving sufficient room for the important documents that are subjoined, and which are the principal objects of this publication.† The form of a letter to a friend, which I adopted, will show that I did not at first contemplate treating the subject so much at large as I have done;

* Post, pp. 60, 85, 114.
† It was at first intended for the sixth volume of the American Philosophical Transactions, now in the press, which could not have afforded room for a long Dissertation to be added to the Vocabularies. When the Society ordered it to be published separately, it was too late to write it over again.
and yet I am far from having exhausted it. New views are constantly presenting themselves to me, which I must leave to others, to whose minds I have no doubt they will also suggest themselves. I hope that at some future day this subject will be resumed by an abler hand. It appears to me to involve some of the most important principles of the philological science.

On the whole, by the publication of this book, I have had in view to establish the following propositions:

1. That the Chinese system of writing is not, as has been supposed, *ideographic*; that its characters do not represent *ideas*, but *words*, and therefore I have called it *lexigraphic*.

2. That ideographic writing is a creature of the imagination, and cannot exist, but for very limited purposes, which do not entitle it to the name of writing.

3. That among men endowed with the gift of speech, all writing must be a direct representation of the spoken language, and cannot present ideas to the mind abstracted from it.

4. That all writing, as far as we know, represents language in some of its elements, which are words, syllables, and simple sounds. In the first case it is lexigraphic, in the second syllabic, and in the third alphabetical or elementary.

5. That the lexigraphic system of the Chinese cannot be applied to a polysyllabic language, having inflections and grammatical forms; and that there is no example of its being so applied, unless partially or occasionally,* or as a special, elliptical and enigmatical mode of communication, limited in its uses; but not as a general system of writing, intended for common use.

* In our alphabets we have single letters which represent words, as A, E, I and O, in Latin; A and I, in English; E and O, in Italian; U, in Low Dutch; Y, in Spanish and French, &c. These are at the same time elementary, syllabic, and lexigraphic. In the ancient Egyptian system of writing, there are lexigraphic characters; but see what I have said on that subject, post, p. 129.
6. That it may be applied to a monosyllabic language, formed on the model of the Chinese; but that it will necessarily receive modifications and alterations, which will produce material differences in the value and significations of the characters between different languages, however similar in their original structure; and therefore,

7. That nations, whose languages like the Japanese, and, as is said, the Loo-chooan, are polysyllabic, and have inflections and grammatical forms, although they may employ Chinese characters in their alphabet, cannot possibly understand Chinese books and manuscripts, unless they have learned the Chinese language; and that if those nations whose languages are monosyllabic, and who use the Chinese characters \textit{lexigraphically}, can understand Chinese writings without knowing the language, it can only be to a limited extent, which it is one of the objects of this publication to ascertain.

Although strongly impressed with the conviction of the truth of these propositions, it is nevertheless with great deference that I submit them to the judgment of the learned.

LETTER

FROM

PETER S. DU PONCEAU

TO

JOHN VAUGHAN, Esq.,

ON

THE NATURE AND CHARACTER

OF THE

CHINESE SYSTEM OF WRITING.

Read before the American Philosophical Society 2d of December, 1836, and referred by them for publication to their Historical and Literary Committee.
Letter from Peter S. Du Ponceau to John Vaughan, Esq.,

My dear Sir,

I beg leave to present through you to the American Philosophical Society two manuscript vocabularies of the Cochinchinese language, which, if published under their auspices, will in some measure contribute to the advancement of comparative philology. The languages of Tonquin and Cochinchina, and in general of the ultra-Gangetic idioms, are very little known in Europe,* and even in British India, and we know still less of them in this country. The Tonquinese and Cochinchinese are sister languages to

* I find in the Journal des Savans for March last, that a grammatical sketch of the Burman language has been lately published in French at Hesse Darmstadt, by Mr. A. A. E. Schleiermacher, privy councillor to the grand duke of that principality. It is introduced as an appendix to a dissertation on a philological problem proposed in 1824 and 1825 by the Volney Commission of the French Institute, and which received a premium, which, by the analysis that M. Silvestre de Sacy has given of it in the journal above mentioned, it appears to have justly deserved. The author, who does not profess to be a grammarian or a linguist, has shown himself entitled to the praise of both—and moreover, to that of a clear, logical, and profound reasoner. I do not find that that interesting work has yet made its way into this country.
the Chinese, which they not only resemble in the derivation of their words, but in their monosyllabic character and grammatical structure; and their graphic system is evidently borrowed from that of China. A comparison of those languages, therefore, as spoken and as written, is a subject of considerable interest. One of these vocabularies has the written characters prefixed to the words; and both, I hope, will be favourably received by the learned world.

A fortunate circumstance brought these manuscripts into this country. In the year 1819, two vessels sailed from the port of Salem, in Massachusetts, on a commercial voyage to the China Seas, and touched at Cochinchina. They were, it is said, the first American ships that ascended the Don-nai river, and displayed the stars and stripes before the city of Saigon. On board one of those vessels was Lieut. White, of the United States' navy. During his stay in that capital, he became acquainted with Father Joseph Morrone, an Italian missionary, who made him a present of the above mentioned vocabularies, the one Cochinchinese and French, consisting of 333 words, with the appropriate characters prefixed to each; the other more voluminous, Cochinchinese and Latin, in the alphabetic form of a dictionary, but without the characters. The first, in two columns, (the second column being a comparison of the Cochinchinese with the Chinese, by a French sinologist,) is here presented in an English dress; the other in the original state. I believe no similar work has yet been published in Asia or Europe.

I have never been able to bring my mind to concur in the opinion so generally entertained, that the characters which the Chinese employ in their writing, and of which the Cochinchinese and other nations also make use, are what is called ideographic, that is to say, that they present to the mind ideas unconnected with vocal sounds, so as to make what is called an ocular language, of which words are only the pronunciation; and consequently, (for the con-
sequence appears to me necessarily to follow,) that it is a system of pasigraphy, to be read alike in all languages, which absurd consequence appears now to be abandoned by philologists. But the fact of the Chinese characters being read and understood by the Cochinchinese, Japanese, and other nations, speaking different languages and ignorant of that of China, is to this moment asserted by missionaries, travellers, and even learned philologists in Asia and Europe, so that logic is forced to yield to the weight of authority. The manuscripts accompanying this letter will, I hope, go a great way towards deciding this question, which I think has not been sufficiently investigated. As introductory to them, I wish to submit to the Society the views which I entertain of the nature, genius, and character of that Chinese system of writing to which such wonderful effects are attributed, and I beg you will follow me in that discussion, which I shall endeavour, though not an easy task, to make as brief as possible.

I do not pretend to be a sinologist in the legitimate sense of the word. It never was my intention to penetrate into the depths of Chinese literature, to read and understand the works of Confucius and Meng-Tseu. I never attempted to commit to memory, to any considerable extent, either the characters or the words of the Chinese language. The study I have made of it has been directed to a single object, which was, to become acquainted with the grammatical structure of that idiom, and the principles of its graphic system. It is not, therefore, without the greatest diffidence, that I venture to advance my opinion upon it. But the science of general and comparative philology is so extensive, as it embraces all human languages, that those who apply themselves to it cannot be expected to possess, I do not say all, but any considerable number of the idioms of which it treats; otherwise, there would be an end of the science.
the Chinese, which they not only resemble in the derivation of their words, but in their monosyllabic character and grammatical structure; and their graphic system is evidently borrowed from that of China. A comparison of those languages, therefore, as spoken and as written, is a subject of considerable interest. One of these vocabularies has the written characters prefixed to the words; and both, I hope, will be favourably received by the learned world.

A fortunate circumstance brought these manuscripts into this country. In the year 1819, two vessels sailed from the port of Salem, in Massachusetts, on a commercial voyage to the China Seas, and touched at Cochinchina. They were, it is said, the first American ships that ascended the Don-nai river, and displayed the stars and stripes before the city of Saigon. On board one of those vessels was Lieut. White, of the United States' navy. During his stay in that capital, he became acquainted with Father Joseph Morrone, an Italian missionary, who made him a present of the above mentioned vocabularies, the one Cochinchinese and French, consisting of 333 words, with the appropriate characters prefixed to each; the other more voluminous, Cochinchinese and Latin, in the alphabetic form of a dictionary, but without the characters. The first, in two columns, (the second column being a comparison of the Cochinchinese with the Chinese, by a French sinologist,) is here presented in an English dress; the other in the original state. I believe no similar work has yet been published in Asia or Europe.

I have never been able to bring my mind to concur in the opinion so generally entertained, that the characters which the Chinese employ in their writing, and of which the Cochinchinese and other nations also make use, are what is called ideographic, that is to say, that they present to the mind ideas unconnected with vocal sounds, so as to make what is called an ocular language, of which words are only the pronunciation; and consequently, (for the con-
sequence appears to me necessarily to follow,) that it is a system of *pasigraphy*, to be read alike in all languages, which absurd consequence appears now to be abandoned by philologists. But the fact of the Chinese characters being read and understood by the CochinChinese, Japanese, and other nations, speaking different languages and ignorant of that of China, is to this moment asserted by missionaries, travellers, and even learned philologists in Asia and Europe, so that logic is forced to yield to the weight of authority.

The manuscripts accompanying this letter will, I hope, go a great way towards deciding this question, which I think has not been sufficiently investigated. As introductory to them, I wish to submit to the Society the views which I entertain of the nature, genius, and character of that Chinese system of writing to which such wonderful effects are attributed, and I beg you will follow me in that discussion, which I shall endeavour, though not an easy task, to make as brief as possible.

I do not pretend to be a sinologist in the legitimate sense of the word. It never was my intention to penetrate into the depths of Chinese literature, to read and understand the works of Confucius and Meng-Tseu. I never attempted to commit to memory, to any considerable extent, either the characters or the words of the Chinese language. The study I have made of it has been directed to a single object, which was, to become acquainted with the grammatical structure of that idiom, and the principles of its graphic system. It is not, therefore, without the greatest diffidence, that I venture to advance my opinion upon it. But the science of general and comparative philology is so extensive, as it embraces all human languages, that those who apply themselves to it cannot be expected to possess, I do not say all, but any considerable number of the idioms of which it treats; otherwise, there would be an end of the science.
This is my apology, and the only one that I have to offer: I hope it will be received with indulgence.

Perhaps it is fortunate for me that I have not learned the Chinese language, and have not read in the original tongue the encomiums of the Chinese writers upon it. I might have imbibed that enthusiasm, “so difficult,” says M. Remusat, “to moderate when one begins that study.”* I feel no such enthusiasm; nor have I, on the other hand, any prejudice against the Chinese† or their idiom: my judgment is free to act without bias on either side. Without further preface, therefore, I shall enter at once upon my subject, dividing it into short sections for the sake of method and clearness, and in order to give you intervals to breathe; for although it is my intention to make this letter as short as possible, I fear I may be drawn by my subject to a greater length than I contemplate. I shall, however, do all in my power to be brief, even at the risk of deserving the reproach of being obscure, which I shall, nevertheless, also endeavour to avoid, steering as well as I can between the two rocks which I too clearly perceive standing in my way. But I must proceed.

† Unless my opinion of their national suavity (in which, perhaps, they are not singular) should be construed into prejudice.
SECTION 1.

When in the last century the Chinese language, through the writings of the Catholic missionaries, became known to the learned of Europe, great astonishment was excited by its simple, ungrammatical structure, by its complicated graphic system, and by the small number of its monosyllables, compared with the immense quantity of the characters employed in writing.* Every new and extraordinary object must, with the mass of mankind, be a monster or a miracle; the latter was preferred.† Admiration succeeded surprise, and then imagination did its work. The Chinese writing was called hieroglyphic, ideographic, and said to represent ideas entirely independent of speech. It was almost exclusively considered as the language, and the spoken words were called its pronunciation, as if they were only a secondary mode of communicating ideas, and dependent upon the ocular method. At last, it was said that the Chinese characters were read and understood as in China, by nations entirely ignorant of the spoken idiom. In short those visible signs were held up by enthusiasts as a model for an universal language which should reach the mind through the eyes, without the aid of articulate sounds.

These enthusiastic opinions were introduced into Europe by the Catholic missionaries, about the middle of the last century. Those venerable men imbibed them from the

* M. Remusat (Gram. Chin. 33) states the number of syllables of the Chinese language to be 450, which, by the variation of tones or accents, may be increased to 1203. The number of written characters (Ibid. 22) he computes to be 33,000. They have been said to amount to 80,000. Dr. Marshman gives 31,214 as the number of those that are to be found in the Imperial Dictionary, (Gram. p. 31.) He does not much differ from M. Remusat.

† Maluit esse Deum. Hor.
Chinese literati, whose national vanity is without bounds. They were received as sacred oracles, and spread rapidly among the learned, who, like other men, are apt to be smitten with the wonderful.* Even in this enlightened age these opinions are yet supported, to a greater or lesser extent, by men whose judgment in other matters is entitled to the respect of all.

I might here quote numberless passages from the writings of the missionaries, to show the wild ideas which they entertained of the Chinese writing, but I wish not to exceed reasonable bounds. One example, I think, will be sufficient. *Ab uno disce omnes.*

A French missionary, Father Cibot, thus wrote from Pekin, under the assumed name of Father Ko, a Chinese Jesuit, in an *Essay on the Antiquity of the Chinese Nation*, which is published in the first volume of the *Mémoires concernant les Chinois*: “The Chinese characters,” says he, “are composed of symbols and images, unconnected with any sound, and which may be read in all languages. They form a kind of intellectual, algebraical, metaphysical and ideal painting, which expresses thoughts, and represents them by analogy, by relation, by convention,” &c.†

These opinions were adopted without discussion by the learned, not only in France, but in all Europe. M. Fréret, a distinguished member of the Academy of Inscriptions and Belles Lettres, thus expresses himself on the subject: “The

---

* Il y a un certain éclat dans les idées extraordinaires, qui les rend propres à séduire quelquefois les esprits les plus judicieux. Remusat, Recherches sur les langues Tartares, p. 29.

† Ils (les caractères Chinois) sont composés de symboles et d’images, et ces symboles et images ne tenant à aucun son, peuvent être lus dans toutes les langues, et forment une sorte de peinture intellectuelle, d’algèbre métaphysique et idéale, qui rend les pensées, et les représente par analogie, par relation, par convention, &c. Mém. conc. les Chin. vol. i. p. 22.
Chinese characters are immediate signs of the ideas which they express. One would think that that system of writing was invented by mutes, ignorant of the use of speech. We may compare the characters of which it is composed to the algebraic signs which express relations in our mathematical books. Let a geometrical demonstration, expressed in algebraic characters, be presented to ten mathematicians of different countries, they will all understand it alike, and yet they will not understand the words by which those ideas are expressed in speech. The same thing takes place in China; the writing is not only common to all the inhabitants of that great country, who speak dialects different from each other, but also to the Japanese, the Tonquinese, and the Cochinchinese, whose languages are entirely distinct from the Chinese.*

These wonderful descriptions of another hieroglyphical system of writing, naturally led the minds of the learned to that of the ancient Egyptians, which was then and is still considered as ideographic, in the same sense with the Chinese. Father Kircher was no more, and Young and Champollion had not yet appeared. Mr. Needham, an English-

* Les caractères Chinois sont signes immédiats des idées qu'ils expriment. On dirait que cette écriture aurait été inventée par des muets qui ignorent l'usage des paroles. Nous pouvons comparer les caractères qui la composent avec nos chiffres numéraux, avec les signes algébriques qui expriment les rapports dans nos livres de mathématiques, &c. Que l'on présente une démonstration de géométrie exprimée en caractères algébriques aux yeux de dix mathématiciens de pays différents; ils entendent la même chose: néanmoins ces dix hommes sont supposés parler des langues différentes, et ils ne comprendront rien aux termes par lesquels ils exprimeront ces idées en parlant. C'est la même chose à la Chine; l'écriture est non seulement commune à tous les peuples de ce grand pays, qui parlent des dialectes très différents, mais encore aux Japonais, aux Tonquinois, et aux Cochinchinois, dont les langues sont totalement distinguées du Chinois.—Réflexions sur les principes généraux de l'art d'écrire, &c., par M. Fréret, in the Memoirs of the Academy of Inscriptions and Belles Lettres, vol. vi. p. 609.
man, being at Turin, saw in the museum of that capital some Egyptian characters, which he conceived to have a resemblance to those of China. He communicated his discovery to the Royal Society of London, of which he was a member; and they thought it sufficiently important to take upon it the opinion of the Catholic missionaries in China. The Egyptian and Chinese symbols were sent to them, and, after due examination, they sent their answers through Father Amiot, which is also recorded in the first volume of the Mémoires concernant les Chinois. It was decided that there was no affinity between the Chinese and the Egyptian characters, and no reason to infer from them that the two nations were connected together. As far as relates to the question submitted, the arguments of Father Amiot are extremely judicious, and he appears to have been a man of sound sense, when certain superstitious notions did not lead him astray.* On the subject of the Chinese writing, however, he adopted the opinion of his brother missionaries. "I define," says he, "the Chinese characters, such as I conceive them in their origin, to be images and symbols, unconnected with any sound, and which may be read in all languages."†

It is now well understood that there is no connexion between the Chinese writing and the Egyptian hieroglyphics, but the doctrine advanced by the Catholic missionaries in the eighteenth century is still maintained in the nineteenth, by some

* The French missionaries at that time thought they saw in the Chinese characters typical signs, connected with the mysteries of the Christian religion, and some of them were prophetic, announcing the future coming of the Messiah. De Guignes saw in them Phenician Letters, borrowed from the Egyptian hieroglyphs. Remusat, in Mémoires de l'Acad. des Inscrip. vol. viii. new series, p. 11.

† Je définis les caractères Chinois, tels que je les conçois dans leur origine, des images et des symboles, qui ne sont liés à aucun son, et peuvent être lus dans toutes les langues. Mém. conc. les Chin. vol. i. p. 282.—The words dans leur origine, qualify this opinion in some degree.
of the most eminent philologists of Europe, and has given rise to opinions of such a strange character, as can hardly be believed to have been entertained by learned and judicious men in this enlightened age. Permit me to give you some examples in proof of this bold assertion, and to show how far the imagination of men, gifted with the most acute and discriminating minds, can mislead them, when once they have adopted an opinion on the authority of others, and without sufficient examination.

If the Chinese characters are an original language, unconnected with sound, and conveying ideas to the mind through the eyes, without the intervention of any other medium, the first question that arises is how, by whom, and by what process was it invented? "We can hardly imagine," says Dr. Marshman, "that while most of the languages, formed on the alphabetic plan, bear evident marks of being formed rather by accident than design, a number of Chinese sages should have sat in deep divan, in order to select certain objects as the basis of the imitative system; yet we shall find that these elements include most of the objects of sense, which are remarkably obvious, few being omitted which from their form or frequent use might be likely to attract notice," &c. The Doctor proceeds to point out the difficulties that must have attended the formation of the 214 radicals of the Chinese alphabet, but comes to no conclusion on the question that he has raised.*

But M. Remusat, one of the most learned sinologists of Europe,—one whose loss is regretted by all who could appreciate his talents and his virtues, and by none more than myself, whom he honoured with his esteem,—that great man, while he admits the force of the negative proposition of Dr. Marshman, undertakes to decide the question in such a manner as must excite astonishment in every reflecting

* Clavis Sinica, p. 18.
mind. Unable to account, on rational principles, for the origin of a system of writing unconnected with sounds, he falls upon the notion that that system was invented before an oral language was adapted to it, which is not very far from the general proposition that writing preceded language, and that men wrote before they spoke. But let us hear him. “Some writers,” says he, “among whom Fourmont holds the first rank, have considered the Chinese language (he means the writing) as being the invention of some philosophers, who afterwards communicated the use of it to their nation; and considering the characters as anterior to the words, and consequently writing as existing before speech, they have made of the words of the spoken language the expression of the characters or their name, if I dare thus to speak: in this those authors appear to me to have inverted the natural order. Indeed, if things had so happened, it would not be astonishing that the whole language should be composed of monosyllables, since every part of it would have been formed by men of learning according to the principles which they thought the fittest. But who will believe that any language was formed in that manner, or that a language thus formed should have been adopted by the people?”

M. Remusat here speaks like a philosopher, and his reasoning is conclusive on all points. But who will believe that this eminent and justly celebrated sinologist, after thus demolishing the system of M. Fourmont and others, contradicts in the same breath all he has said, by the conclusion which he draws, which is quite as fanciful as that of the writers whom he censures? “Is it not,” says he, “much more likely to suppose that there was among the Chinese, prior to the invention of the characters, a popular language composed of words, if not all monosyllabic, at least very short,

* Mélanges Asiat. tom. ii. p. 52.
as they are found among many barbarous nations? This language will have been adopted by the inventors of the writing, to serve as a pronunciation to the characters, and that the learned might communicate with the common people. One is inclined to believe that things must have so happened, when one considers,” &c.* Here M. Remusat attempts to support his conjecture by arguments derived from the peculiar structure of the Chinese language, which it is unnecessary to repeat†

Do not believe, my dear sir, that I mean here to detract from the well earned reputation of our much regretted associate, Abel Remusat, whom I justly consider as one of the first philologists of his age, and one whose labours have greatly contributed to the advancement of science. In this case he only partook of a general error, spread all over

* N'est il pas beaucoup plus vraisemblable de supposer qu'il y ait chez les Chinois, avant l'invention des caractères, une langue populaire, composée de mots, si non tous monosyllabiques, au moins très courts, comme on les trouve chez beaucoup de nations barbares? Cette langue aura été adoptée par les inventeurs de l'écriture pour servir de pronunciation aux caractères, et pour que les gens instruits pussent s'entendre avec le vulgaire. On est porté à croire que les choses ont du se passer ainsi, quand on considère, &c. Mélanges Asiatiques, vol. ii. p. 52.

† A similar opinion was entertained by the once celebrated orientalist Golius, who flourished about the middle of the seventeenth century. “Il croyait,” says Leibnitz, “que la langue des Chinois est artificielle, c'est à dire qu'elle a été inventée toute à le fois par quelque habile homme pour établir un commerce de paroles entre quantité de nations différentes qui habitaient ce grant pays: que nous appelons la Chine.” Nouveaux Essais sur l'entendement humain, 1. iii. c. 1, § 1, in Raspe's edition, p. 232.

Thus the wildest opinions are reproduced from age to age, and will probably continue to be so until the end of the world. The great Leibnitz gravely proposed an universal philosophical language, founded on the principles of mathematical science, by which all truths could be demonstrated, and all errors detected. Almost all the errors of mankind may be traced to celebrated philosophers; such is the weakness of our nature, and it shows how little respect is due to authority, in matters that depend on reason and common sense.
Europe at the time when he wrote, and supported by such respectable authority that it would have appeared presumptuous at that time to controvert it. You can easily see by the passage which I have quoted, that his mind was not entirely free from doubt and hesitation, since he advances propositions in evident contradiction to each other. I shall show, in its place, that at a subsequent period he was among the first who successfully combated the opinion that the Chinese writing was read and understood by nations who were ignorant of the spoken language. As to its ideographic character he appears not to have varied; but this notion was not peculiar to him or to his country; it was entertained, as I have said, by the learned of all Europe. The celebrated Adelung thus speaks in the Mithridates of the graphic system of the Chinese: “It differs from all others in this; that it neither consists of natural or symbolic hieroglyphics, nor of an alphabet of syllables or letters, but represents whole ideas, each idea being expressed by its own appropriate sign, without being connected with speech. It speaks to the eyes as the arithmetical figures of Europe, which every one understands, and pronounces after his own manner. Thus it may be learned, without knowing a word of the language.”* Mr. Adelung, however, does not go so far as to say, that the Chinese characters were invented before a language or pronunciation was applied to them; but we find that idea entertained by men of learning not only in France, but also in England.

An anonymous writer in the London Quarterly Review, who, I am told, is believed to have been a celebrated philologist whose name I do not feel at liberty to mention, goes even farther than M. Remusat, who only supposed that after the invention of the characters, an existing language was sought to be applied to them as a pronunciation; but the writer I speak of presumes that a language was made, and words invented, for that purpose. He instances the two words *sun* and *moon*, which, joined together in a group, signify *splendour* or *brilliance*. "It was necessary," says he, "to give a name to this new compound,"* and he proceeds at great length to show by what combinations of sounds and ideas the Chinese succeeded in finding a word to serve as a pronunciation for the sign. From these strange theories it would seem that words were made to represent signs, and not signs to represent words. This shows how difficult it is, even for learned and intelligent men, to get over ancient and deeply rooted prejudices.

Such were the ideas generally entertained by learned sinologists, respecting the graphic system of the Chinese, so late as the beginning of the present century; and although the principles of that method of writing are now better understood than they were at that time, the science is nevertheless still overshadowed with much prejudice, and many vague, unsettled notions, because those principles have not been philosophically investigated and clearly traced to their origin. A recent writer on China, the Rev. Mr. Gutzlaff, a protestant missionary, who has resided in that country, and is well acquainted with its language, expresses himself in these words: "Nothing," says he, and he speaks the truth, "has so much puzzled the learned world in Europe, as the Chinese language. To express so many ideas as arise in the mind by 1445 intonated monosyllables—to substitute a

distinct character for a simple alphabet, was undoubtedly a gigantic effort of human genius. But the Chinese have effected what we might have deemed impossible.”* Here this author only shows his admiration of the Chinese system of writing, in comparison to which he considers the oral language to be imperfect, and tells the old story of the Chinese having recourse to writing when they cannot express themselves by words. But afterwards, in a communication to the Royal Asiatic Society of Great Britain and Ireland on the language of Cochinchina, so late as the year 1831, he goes much farther, and asserts the pretended pasigraphic character of the Chinese writing. “It is generally known,” says he, “that neither sound nor tone is inherent in the Chinese characters, but that they are read in different ways, whilst the significance of the character remains the same in all the countries where the Chinese way of writing is adopted.”†

This appears to me to be going as far as any Catholic missionary ever did, and is sufficient to show that the true principles on which rests the graphic system of the Chinese are yet far from being clearly and correctly understood.

When such opinions are advanced by men of real learning, and who are practically as well as theoretically acquainted with the Chinese language, it is not astonishing that it should be still maintained that Chinese books and other writings are understood by nations who speak different idioms, and are unacquainted with that of China. Even at this day, this is asserted as a fact by men of respectability, and who speak of their own knowledge, as I shall show in its proper place before I conclude this letter. This arises from the false notion that the Chinese characters are unconnected with words. And to bring this matter still nearer to

* History of China, ch. iii.
the present time, and to show how vague and unsettled are the opinions now entertained on this subject, I need only refer to an article, which has at this moment caught my eye, in the Edinburgh Review for the month of October last, and in which I find the Chinese system of writing thus described: “The Chinese have for ages employed a multitude of ideographic (sic) characters, derived by composition and otherwise from a limited number of elementary pictures or representations of external objects called keys, without making the least step towards an alphabet.” And further: “The Egyptians seem likewise to have remained contented with their hieroglyphic system, or at least not to have advanced a step beyond it.” Here the writer speaks of ideographic and hieroglyphic characters as opposed to alphabets, by which last word he clearly understands those signs which represent the primary elements of sounds, and which we call consonants and vowels. He seems to forget that other sounds may be represented by characters or letters, however these may be shaped, whether in the forms of living objects or otherwise, and his distinction appears founded on the ideographic character, (as he calls it,) of the Chinese and Egyptian signs and our elementary system, which alone he seems to consider as phonetic; yet in another place, when commenting on Bishop Warburton’s opinion that the hieroglyphs of Egypt constituted a real written language, applicable to all kinds of civil as well as of religious matters, he very justly observes that such a system of writing must have been in connexion with the spoken language,*, which is what I mean to prove to you and to the Society, and to show, as far as is in my power, how this connexion is formed, particularly in the Chinese, and that the word ideographic is improperly applied to that system of writing. The writer of this article does not appear to entertain perfectly clear

elsewhere: "Each character answers in the oral language to a word that has the same signification; the character awakens in the mind of him who sees it the same idea as the word, if it should be heard."*

Here let us pause for a moment. Each character represents a word, and each word has a character to represent it. This cannot be denied; all the sinologists agree to it. How comes it, then, that there should be eighty, forty, or thirty thousand written characters, and less than two thousand words, including all the differences of tones and accents? This is a curious question, though not of much consequence to my argument. No sinologist has yet said that there are characters without meaning, except those, the signification of which has been lost by the lapse of time; none has said that there are characters which are not the expression, or, to speak more properly, the representation of some word in the language. The characters, therefore, which exceed in number the words of the idiom must necessarily be superabundant, and it is not difficult to account for their existence; we need only look at home. The Portuguese orthography was once exclusively used to represent the sounds of the Chinese words by means of the letters of our alphabet, and it was adopted and understood by all, until national vanity and individual caprice interfered. Not only every nation, but every sinologist has his own mode of spelling Chinese words. The English, the French, and the Germans, have each adopted a mode of spelling suited to their own language. But the evil does not stop here; every writer has a spelling of his own; Morrison does not spell like Marshman, nor Remusat like De Guignes. Where will this confusion end? For my part, I adopt in this disquisition the spelling of the writer that first comes to

* Chaque caractère Chinois répond, dans la langue orale, à un mot qui a la même signification; le caractère éveille dans l'esprit de celui qui le voit, la même idée que le mot, si l'on vient à l'entendre. Ibid. p. 23.
hand. I shall certainly not try to reconcile them, or show a preference to one over the other. I only wish that the old fashioned Portuguese mode of spelling had been preserved; or that the alphabet of my learned friend Mr. Pickering was as generally adopted by the learned of Europe and America, as it is by our missionaries in the South Sea Islands and elsewhere.

This example is sufficient to show why there are so many synonymous characters in the graphic system of the Chinese. They are only different manners of spelling the same words, every writer having thought his method superior to that of the others. I shall explain hereafter in what that method consists, and you will easily understand how it came to be applied in different ways to the formation of a variety of characters intended to represent the same words.

After all, a great many of those characters are out of use, and the number of those which are commonly employed is comparatively small. It is only among the learned that a variety of characters is employed.

But the difference, in point of numbers, between the written and spoken words of the Chinese language, is not so great as is generally imagined. In the first place, there are a great number of homophonous words, which being pronounced alike are, as I presume, in calculating the numbers of those significant syllables considered as one and the same pronunciation of different characters, and not so many different words in relation to their sense. It is the same as if, in our language, we should consider as one the words *fain, fane,* and *feign,* because pronounced alike, although they differ in meaning widely from each other. There is another mode of computation which is directly the reverse of this. Because the monosyllables of the Chinese language are significant, they alone have been honoured with the name of *words,* and their numerous compounds have been left out of view. I have said above, that those monosylla-
bles might be compounded, precisely as those of our own language in *welcome, welfare, &c.*; and I may add here, that the greatest part of the Chinese idiom is formed of those compounds, which are separated only by the manner in which they are exhibited to the eye when written. Thus, in our dictionaries, *shoemaker* is found as a polysyllabic word, while *pear tree* is not, but each of its component syllables must be looked for in its proper place, according to the alphabet. And yet it would seem that *peartree* is as much a word in English as *shoemaker, shipwright,* and so many others. There are English words which in Chinese are expressed by five significant monosyllables, such for instance as the word *puberty,* which is called *fa-shin-teih-shé-hou.* I am not sufficiently versed in the Chinese language to explain the meaning of each of these five monosyllables; I leave the task to sinologists. But it is evident, that nothing is wanting but to give to the Chinese compounds the denomination of *words,* to make that language as rich, perhaps, as those whose composition is disguised by the foreign origin of the monosyllables, or the more artificial manner in which they are joined together.

Dr. Morrison has rendered a great service to philology by his alphabetical dictionaries of the Chinese (spoken) language, the one Chinese and English, and the other English and Chinese. He would have rendered a still greater, if he had explained the meaning of each of the characters that are grouped together to represent a word compounded of several others, as those which are employed to express the English word *puberty,* which I have mentioned above. But the learned Doctor wrote for merchants and missionaries, and not for philologists; and his works were intended for practical use, and not to aid philological disquisitions, to which nevertheless they are of great advantage, and for

* Morrison's English and Chinese Dictionary, *verbo* *puberty.*
which the author is justly entitled to our thanks. But let us return to our subject.

It is, as I have just shown, a fact not to be denied, that each Chinese character has a word to represent it, and vice versa. Here is, therefore, a close connexion between the writing and the language, and they cannot be said to be independent of each other. I must now prove that the writing was made for the language, and for no other purpose than to recall its words to the memory of the reader. To be convinced of this, it is sufficient to observe that the characters follow servilely the spoken words, and the ideas which these express, in the order in which they are explained. Thus a glove, which in our language expresses a compound idea in one word, is called in Chinese show-taou, hand covering,* and there is a character for each of these words. If, as in German, the language had said hand-shoe, the writing would have the character which stands for shoe instead of that which represents the word covering. In the same manner a sailor is called ship-hand; a library, book-house; a monk, reason-house (the house of reason); a physician, medicine-house. The abstract idea of a thing is quaintly expressed by the words east-west; and that of a brother indefinitely by two monosyllables, one of which signifies elder brother, and the other younger brother. In representing all these compounds, and a multitude of others, of which the language is full, the writing does not attempt (if I may use the expression) to think for itself, and to represent ideas after a manner of its own, but follows the spoken language step by step, word for word, and echoes it through the eye to the mental ear. Perhaps it will be said, that it is not the writing that follows the language through its various combinations of ideas, but on the contrary that it is the language which is the echo of the characters; but that would lead us to the

* Morrison's English and Chinese Dictionary, verbo glove.
absurd conclusion of the pre-existence of the latter, which I think I have already sufficiently exposed.

The learned authors of the historical and descriptive account of China, which is a part of the collection called "The Edinburgh Cabinet Library," are therefore under a mistake, when they say that "the idea of making the written subservient to the spoken language, seems never once to have occurred to the mind of a Chinese."* On the contrary, it is clear that the primary, and indeed the sole object of the inventors of the writing, was to give representative signs to the words of the oral idiom, and consequently to make their graphic system subservient to it, as in fact it is and ever will be. That the literati of China should entertain a different opinion, and "consider speech as an altogether secondary and subordinate mode of communication," is not at all to be wondered at; their excessive vanity led them into this prejudice, and maintains them in it.

So far, at least, no sign appears of an ideographic language, as the Chinese writing has been called. Its object, as far as we have seen, is not to recall ideas to the mind abstracted from sounds, but the sounds or words in which language has clothed those ideas. The written signs do not, indeed, represent sounds in the elementary form of letters, but in the compound form of syllables and words. They have precisely the same effect as our groups of letters, and do not advance a step farther into the ideal world. Then we may say that it is not an idea that each character represents, but a word; and if it represents the idea at all it is through the word which it calls to mind; and such is the operation of our alphabetical writing. The five letters which, placed next to each other, form the word horse, present to our minds the idea of the animal so called, quite as

† Ibid.
well as the horizontal and perpendicular strokes of the Chinese character answering to the same word. That group of letters might also be called ideographic, when, in fact, it is but the sign of a spoken word.

Man spoke before he wrote, and languages were fixed before any system of writing was invented. Before the invention of their characters, the Chinese communicated by means of knotted cords, like the Quipos of the Peruvians.* They might be yet in a savage state when they invented their writing, but nevertheless they spoke and understood each other. Their ideas, then, had received an external shape, the impression of which was made through the sense of hearing, and therefore they were not driven, like those born deaf and dumb, to give them an original form, derived only from their sensations. Where a solitary language exists, be it ocular or auricular, ideas present themselves to the mind clothed in the forms that that language has given them. The deaf and dumb man, before he has learned to read, thinks in the visible signs by means of which he communicates with his fellows: when, by the art of De l'Epée and his followers, he has learned to understand some written language, he thinks in the groups of letters or characters the meaning of which he knows, and which memory presents to his recollection through the mental eye. Without these helps his ideas would be vague and confused, having nothing on which to fix themselves; and they would be reduced to the feeling of present sensations and the recollections of the past. We, who are possessed of the art of writing, do not think in groups of alphabetical characters, but in combinations of spoken words, because we have learned the words before the figures, and the impression that they have made is more deeply fixed in our minds. Thus it must have been with the Chinese, when they invent-

ed their art of writing; they thought in words, and their ideas had no shapes but those that the words had given them.

That the Chinese alphabet is ingenious, I am by no means prepared to deny; my object is only to show, that it was made to represent the significant syllables which constitute the language and recall them to the mind, and through them the ideas which they were intended to awaken; but that it is not, as enthusiasts have pretended, a language of ideas, abstracted from and unconnected with any sounds or audible signs. I shall show presently how the Chinese came to this ingenious method to peindre la parole, as the French poet elegantly expresses it, and by that means to parler aux yeux. I shall compare this invention with analogous ones of other nations, and endeavour to point out some advantages which philology may derive from the comparison. But I must at present pursue my argument.

The Chinese characters, ingenious as they are, paint the words, and when read, are read in the words which they represent, and in no others. It is true, that etymologically, or, if you will permit me to coin the word, etymographically considered, they may recall not only the compound idea which each word represents, but some of the accessory ideas which enter into its composition; as, for instance, if the characters that form the group which represents the word clock or watch, should be formed by the junction of the two characters time and piece, and thus might be read time-piece. But in reading, the Chinese, any more than we, do not think of etymology. Whether we say a time piece or a clock, the idea presented to the mind is the same; and in the first case, we do not think separately of time and of piece, but of the machine which the words signify. When we say a square, we do not always think of a quadrangular figure, but the word represents to us, according to the context of the sentence where it is placed, either an open space of
ground, or one of the divisions of our city, or a rectangular instrument employed in certain mechanical operations; and, *vice versa*, when that instrument is exhibited to us it is the word "square" as applied to it, and not the idea of a right angle, that presents itself to our mind. When we say hand maid, we think of a female servant, not of the part of the body called the hand. When we say Bridewell, we neither think of a bride nor of a well, much less of St. Bridget or St. Bride, after whom the place was denominated; we think only of a house of detention. When we say a hogshead, (meaning a cask to contain liquor,) we do not think of the animal called hog, nor of any part of his body. When we speak of the hands of a ship, we think of the men, not of their hands. It is the same with the Chinese. The word she or chi, which signifies time, is represented in writing by a group of three characters, which severally signify the sun, the earth, and a measure; as who should say, "the sun measuring the earth," or in plainer language, "the revolutions of the sun round the earth;" a very just and ingenious metaphor. But, though these three characters separately represent the several words affixed to each, and through them the ideas which those words contain; when grouped together they only bring to mind the word she, and the abstract idea of time.*

But it will perhaps be said, that those characters are *paintings*, that they present to the eye directly or metaphorically, the figures of visible objects, and that their impression is stronger upon the mind, than that of spoken words. *Segnius irritant, &c.* Horace may be quoted here to advantage. But the fact is otherwise. It is true, that in the

* However complicated any character may appear, still the compound, though it embrace six or seven characters, like compounds in Greek and Songskrit, expresses only one idea, and still remains an adjective, a substantive, a verb, &c., as capable of union with other characters, as the simplest character in the language. Marshm. Clavis Sinica, p. 4.
origin of Chinese writing, the painting of natural objects was, to a certain extent, adopted as its medium; thus the sun was represented by a circular figure, the moon by that of a crescent, &c.; but since the adoption of the square characters, those images have vanished, and the Chinese writing exhibits at present to the eye only arbitrary signs, which method has saved from confusion, as will be hereafter explained. A single glance at a Chinese dictionary will convince the reader that the characters, as at present formed, are no representation to the eye of natural objects; as to moral sensations, it is well known that they cannot be painted. The whole system, therefore, consists in representing a word, sometimes by a single character, which also serves as an element wherewith to form others, but most frequently by a combination of those signs, recalling two, three, or more words, which together, as the significant syllables in our compounds, bring to mind the word to be represented. The knowledge of these combinations is in China a science, analogous to what in our own language is called etymology. The knowledge and the history of these combinations is the principal study of the Chinese philologists. They love to trace the origin of their characters, principally of those that are obsolete and no longer in use; to follow and describe their successive variations and their different forms. They have an immense number of what I would call etymological dictionaries, in the study of which they spend many years. That, and the knowledge of the books of Confucius and other moralists, is the sum of the learning of a Chinese savant, and what entitles him to admission to the highest offices in the empire.

Of this learning, as it may be supposed, they are excessively proud; they consider a system of writing, which has cost them so much pains to investigate and trace to its original sources, as the most admirable invention of man; they attribute to it a divine, or what to them is the same, an impe-
rial origin; they consider it as the basis of the language, or rather as the language itself, to which words are only accessory and made for the use of the vulgar; they consider signs which represent only words, as representing ideas, and they believe their writing to be what we call *ideographic*. No doubt they believe it to be so; their long and profound studies have left impressions on their minds, which, with national pride, are the source of those illusions, which nothing can eradicate. To form an idea of them, we need only hear them speak. "The Chinese," say they, "lay the stress on the characters, not on the sounds. The people of Fan (their Tartar neighbours who have syllabic alphabets) prefer sounds, and what they obtain enters by the ear; the Chinese prefer beautiful characters, and what they obtain enters by the eye."*

It is no wonder, therefore, that those Europeans who first studied their language, participated in their illusions, and communicated them to others. M. Remusat, in the first flight of his enthusiasm, thus exclaims: "It is impossible," says he, "to express in any language, the energy of those picturesque characters, which present to the eye, instead of barren conventional signs of pronunciation, the objects themselves, figured by all that is essential in them, so that it would require many sentences, to exhaust the signification of a single word."†

I acknowledge I cannot perceive those picturesque beauties, and that I am rather inclined to compare them to those of Father Castel's ocular harpsichord. But it may

---

† Il me semble, en effet, impossible de rendre dans aucune langue, l'énergie de ces caractères pittoresques, qui présentent à l'œil, au lieu de signes stélès et conventionnels de prononciation, les objets eux mêmes, exprimés et figurés par tout ce qu'ils ont d'essentiel, tellement qu'il faudrait plusieurs phrases, pour épuiser la signification d'un seul mot. Essai sur la langue et la littér. Chin. p. 11.
be owing to my ignorance of the Chinese language. I am persuaded that those beauties exist in the minds of Chinese scholars; such is the force of imagination and of the associations that it brings forth, after the long study and contemplation of a favourite object. I shall, therefore, leave the sinologists in the enjoyment of it, and content myself with endeavouring to prove that the Chinese writing is not, as it is called, ideographic, and that it does not represent ideas, but syllables and words, all of which come within the general denomination of sounds, and therefore, that it belongs to that class of graphic systems, to which philologists have given the name of phonetic, though the sounds which its characters represent are not, with very few exceptions, the primary elements of which our alphabets are composed.*

The ancients called the simple sounds of which human language is composed, elementa, in Greek ἐξωτικά, and the letters which represent them they called literæ and γράμματα. Their writers, however, by a kind of metonymy, frequently employed one of those expressions for the other, and at last used them indifferently. In our modern languages, we hardly ever apply the word sound to the elements of speech, we almost always designate them by the word letters. Thus we say that a Delaware Indian cannot pronounce the letter F, meaning the sound which that letter represents. This confusion of language produces a confusion of ideas, and our word alphabet, formed of the names of two elementary sounds, represented to the eye by the signs A and B, adds to its effect on the mind. Although we know that there are systems of writing in India, the characters of which represent syllables,† and though we call the series of those cha-

* There are a few Chinese words which consist of one single vowel sound.
† The Japanese have an alphabet of 47 syllables, which they call I-ro-fa, from the names of the three first letters, which, as our A, B, C, are
racters a syllabic alphabet, yet, when we use that word ab-
stractedly, those characters are hardly ever present to our
minds, and we only think of alphabets of elementary sounds,
like our own, much less do we think of any sounds consist-
ing of more than one syllable. Hence it follows, that when
in the Chinese characters or Egyptian hieroglyphics, we
look for the signs that we call phonetic, we are disappointed
unless we find such as represent the most simple elements
of speech.

I say the most simple, because I do not believe that what
may be properly called the elements of language, consists only
of the sounds separately represented by the signs which we
call letters. The word element is relative, and is susceptible of
various significations. In one sense, it means all the parts
of which a thing is composed, which parts may be resolved
into more minute elements, until analysis can go no farther.
Then not only what we call letters, but syllables, words and
even sentences, are to be included among the elements of
speech; and the most minute are called the first elements,
prima elementa, which name has been applied to letters
by ancient writers.* Les premiers élémens is a familiar
expression in the French language, which may be applied
to any subject.† In our language, the word elements is also
a generic term. We say the elements of a science, not re-
stricting the word to the first elements.

In this sense, I have no doubt, Clement of Alexandria
used these words in the celebrated passage of the fifth

no others than the sounds of the syllables which they represent. Gram.

† Dict. de l’Acad.
chapter of his *Stromata*, which has occasioned so much discussion among the learned. In his description of the hieroglyphic characters of the Egyptians, he says there are two among them that he calls *kyriological*, which present objects or ideas to the mind, the one by an imitation or picture of the object, (*κατὰ μίμησιν*) the other by means of the first elements (διὰ τῶν πρῶτων γογκικῶν) by which, as the words are applied to a system of writing, he must be understood to have meant the *first* or simplest elements of speech, or in other words, the letters of the alphabet. The discoveries of Young and Champollion, have proved beyond the possibility of doubt, that the Egyptian hieroglyphs were employed in that manner, and in that case they are called *phonetic*, that is to say representing *sounds*.

The celebrated Hellenist, M. Letronne, consulted by his friend Champollion, as to the precise meaning of the words τὰ πρῶτα γογκία, interpreted them exactly as I have done.* Afterwards, however, he doubted the correctness of this interpretation and attempted others, in which, in my opinion, he was not so successful.† Men of eminent talents are too apt to be dissatisfied with themselves, and to find faults in their works, which others cannot perceive, and which do not exist in reality.

In making these observations, I have not meant to draw your attention to the Egyptian hieroglyphics, of which I shall speak more at large in another part of this letter. My object has been to show how vague are the ideas generally entertained as to what constitutes the *elements* of speech, by which I understand all its constituent parts without exception. Sentences are elements in relation to discourse, words to sentences, syllables to words, and simple sounds or letters are either syllables or the elements of syllables.

† See the second edition of the same work.
These are the elements of speech; and writing, I believe, may be so contrived as to represent all or any of them.

When, towards the close of the revolutionary war, I held the office of under Secretary in the Department of State, then called the Department for Foreign Affairs, having been successful in deciphering an intercepted letter written in cipher by Gov. Haldimand of Quebec, to Sir Guy Carleton, at New York, I was desired to devise a new cipher for the use of our diplomatic correspondence. I did so, and made the cipher on the principles that I have above explained. It was extremely simple, and yet it abounded in combinations. Every word might be written either entire, by a single sign, or each syllable and each letter might be represented by a modification of that sign. When I say every word, I mean about one thousand, as it would have been impossible to insert all the words in the Dictionary. There were also signs for whole sentences, such as the formula "By the United States in Congress assembled," and others that occurred most frequently in our correspondence. The cipher was adopted; it was found easy in practice, and was long in use; whether it is so at present, I cannot tell.

I hope you will not ascribe to vanity my having mentioned this circumstance of my early life. There is no great merit in inventing a diplomatic cipher. Since the time I am speaking of, the art has been carried to its highest degree of perfection, and it is the fault of cabinets, if their letters are deciphered. But I meant to show by this example, that words and even sentences may be represented by written signs, as well as syllables and elementary sounds, and that they are all elements of that admirable gift, whether mediate or immediate, of the divinity called language, by which man is distinguished from the brute creation. When, therefore, we are considering a graphic system, the principles of which are unknown to us,
we should take into view all those elements and try to find out which of them the signs are intended to represent or recall to the mind. The pictures of objects, and graphic symbols and metaphors, can serve but a very limited purpose, unless connected with speech; and if they represent ideas, it can only be in the forms in which language, spoken language, has clothed them.

It is for not attending to this comprehensive meaning of the word sound, as applied to language, and confining it exclusively to its primary elements, or at most to insignificant syllables, that sinologists have been led to conclude that the Chinese writing is an ocular language, independent of speech, representing ideas, and addressed wholly to the eye. Dr. Marshman, in his otherwise excellent Grammar of the Chinese language, advances this proposition in the broadest terms. "The sound of no character," says he, "is inherent therein: it may be totally changed without affecting the meaning of the character. Thus to the character yin, a man, might be affixed tao or lee, or any other name, and the character would still convey the same idea, because the written language speaks wholly to the eye." And in proof of his assertion, he adds: "Some characters have two names widely different from each other."

But the Chinese characters representing words, do not speak more exclusively to the eye, than our letters or groups of letters representing elementary sounds. They both are addressed through the eye to the mental ear. And if some of them represent more than one word or one sound, it is an anomaly from which no general principle is to be deduced. There are anomalies in grammar, in pronunciation, in orthography, in every existing language, whatever may be the nature of its graphic system. In our own idiom, letters and groups of letters often represent dif-

* Clavis Sinica, p. 81.
different sounds. The group ough is pronounced differently in the words ought, bough, dough, through and enough, the sound of the letter a is different in grace, in bad, and in all; and of course the same thing may happen with the Chinese characters. And if this fact proves any thing, it is rather in opposition to Dr. Marshman's principle, than in favour of it; for it proves that the characters thus varying their pronunciation may represent different words, precisely as our letters represent different elementary sounds.

If the Chinese writing were, as it is called, ideographic, or, as it is asserted to be, a complete ocular language, independent of the oral mode of communication and unconnected with it, it would have its poetry and its prose, and a style peculiar to itself. It would be translated, not read. But how does the fact stand? The poetry of the Chinese is addressed to the ear. It is measured, and has even recourse for its harmony to the jingle of rhyme.* How could a poem be read if every character did not represent a single word, and if those characters and the words which they are intended to express were not placed in the same order of succession? And as to prose. There are some who believe that there are beauties in the selection and in the arrangement of the characters in the formation of a period. As to the selection; if the character from among which one is selected represent or recall the same word, which they must necessarily do, I have shown that their etymography can have no effect upon the mind of the reader, which seizes upon the word, and through it receives the idea. As to a different arrangement of signs representing different words, as the syntax of the Chinese language depends chiefly on their juxtaposition, it would create a cacophony in reading that would, to the hearer, make the sense of the characters

perfect nonsense. It is impossible, therefore, to accede to such a supposition; the writing must servilely follow the words spoken, otherwise there will be two different languages, and one must be translated into the other. But this is not pretended. Besides, prose as well as poetry is written for the ear and not for the eye. There is a harmony of sounds which every writer is bound to attend to, and to attempt to combine it with a supposed harmony of signs, would be a task, in my opinion, beyond the power of talent and of genius, however exalted, to compass.

From all that I have said, I conclude that the Chinese system of writing is improperly called ideographic; it is a syllabic and lexigraphic alphabet. It is syllabic, because every character represents a syllable: it is lexigraphic, because every syllable is a significant word. I do not know of any other denomination that can be properly applied to it, and this appears to me to be sufficiently descriptive. I submit it, however, to the judgment of those who are better acquainted with the subject.

SECTION III.

I perceive that this letter is already drawn to a great length, and yet I am sensible that my ideas are too much condensed, and need greater development, particularly in the way of examples and illustrations. It will not mend the matter when I tell you that I have not yet done with the Chinese language and its graphic system; I wish to present them in a more general and more enlarged point of view, and to touch on the relation that they bear to other analogous idioms. How far that will lead me, it is impossible to tell.
Brevity and clearness are difficult to be reconciled. I shall do my best, however, to compass that object, and in the meanwhile I entreat your further indulgence.

All the languages that exist upon earth are divisible into four component parts:

1. Sentences or propositions.
2. Words and their various forms.
4. Elementary sounds, which we generally designate by the name of letters, and which the ancient grammarians called, as I have remarked above, *elementa* or *prima elementa*; στοιχία or τὰ αρχαὶ στοιχία.

When, at the confusion of tongues,* the primitive language was forgotten and entirely obliterated from the minds of men, and they were left to their own resources to invent new ones, the descendants of Noah had a difficult task to perform, as at the same time they were dispersed through the different parts of the world. They could not, therefore, agree upon an uniform system, and it is probable that every family had its own. They proceeded separately to the formation of their idioms.

The task they had to perform was, to express their ideas in words and sentences, for which, their materials were syllables and elementary sounds. But there were no philologists among them, and they had not analysis for their guide. Anxious to make themselves understood, some of

* The poet Dante will have it that the primitive language was entirely lost, even before the attempt to erect the Tower of Babel, which produced the confusion of tongues. In his vision of Paradise, he relates a conversation between him and the father of mankind, in which, to the question what language he spoke in Paradise, Adam answers him as follows:

La lingua ch’io parlai fu tutta spenta,
Innanzi che all’ovra inconsumabile
Fosse la gente di Nembrotte attenta.

**Paradiso**, Canto xxvi.
them attempted to express the sense of a whole proposition by a single word. Some ancestor of the Delaware Indians, being invited by his neighbour to partake of some food, said, \textit{Nschingiwipoma}, and made him understand by signs that it meant "I do not like to eat with you." To his mistress he said, \textit{Kdahoatel}, and that was to say, \textit{I love you}; to which she doubtingly answered, \textit{Mattakdahoaliwi}, you do not love me. Thus, by endeavouring to say a great deal at once, a polysynthetic language was formed, which, in the course of time, was regularized by method; for without some method in language, it would be impossible for men to understand each other.

In some other country, say in China, or in the country of the Othomi Indians, whether from the difficulty of articulating sounds, or from some other cause, men stuck to syllables, and conveyed their ideas successively, affixing to each a simple or compound articulation; that is to say, a simple elementary vocal sound, or a syllable. Thus were formed monosyllabic languages.

Between these two opposite systems many others arose, participating more or less of the one or of the other. Then, for the sake of method, grammatical forms were invented, such as the juxtaposition of words to determine their sense; particles prefixed, suffixed, or introduced into the middle of a word, as in the Mexican and its cognate languages; inflections of various kinds, accents, and tones, and all the multitude of audible signs of discrimination between words, which distinguishes from each other the numerous languages existing on the face of the earth.

Whatever form or system was adopted in the first formation of a language, was, by the spirit of imitation natural to man, continued, with occasional modifications, until the idiom attained its highest degree of perfection. Nations frequently adopted words from their neighbours; rarely grammatical forms. Hence we see, that the Chinese has...
remained monosyllabic during the space of four thousand years; while the polysyllabic Sanscrit, in the various dialects derived from it, retains its primitive forms to a greater or less degree, but does not deviate into the monosyllabic system. There is a tendency in languages to preserve their original structure, which cannot escape the eye of the philological observer.

But men were not satisfied with communicating with each other by word of mouth. As they advanced in civilization, they felt the want of an ocular system to interchange their sentiments with the absent, to impart to distant friends the knowledge of facts, and preserve the memory of them to their posterity. Even savage nations felt the want of such a mode of intercourse, to inform their friends of their warlike and hunting movements, and to warn them against those of their enemies. Self-preservation was the first cause that produced this feeling.

The first mode of effecting their object that presented itself to their minds was painting; and the first ocular communication between men, next to audible and visible signs between persons present, was the representation of natural objects by rude figures, to which a particular sense by tradition was affixed, or the meaning of which was easily penetrated by their keen, unsophisticated, and I might say, virgin minds. Every one knows the figures which our northern Indians carve or paint on the bark of trees, to give notice to their friends of facts important for them to know. "But this," says Champollion, "and even painting by the best artists, does not deserve the name of writing. It is incapable of expressing the most simple proposition; even the crayons of Raphael, coloured by Rubens, will always leave us in ignorance of the names of the personages, of the time, and the duration of the action, and will never give to any individual, except the painter himself, a complete idea of the fact; painting representing only an instantaneous mode of
being, which always requires in the spectators some preliminary notions.*

The art of painting is unconnected with oral language. It is evident, that without such a connexion it cannot serve the purpose of writing to any considerable extent. How far the Mexicans, who, being more civilized, have made a more extensive use of pictures than our northern Indians, have contrived to establish such a connexion, if such should exist, it is impossible for us to know, in the present state of the information that we possess upon the subject. On inspection, it would seem that the use they made of those paintings was very limited; and that however tradition might have come in aid of them, they could hardly have served the purposes of writing, which is to be read, and not to be guessed at. Tradition, indeed, is absolutely necessary to make pictures intelligible; among us they generally represent historical scenes, scenes taken from ancient mythology or the sacred records of our religion, with all which we are well acquainted; but how can tradition supply the intelligence of facts unknown, and which have never been heard of? Certain conventional signs may supply this defect, but always imperfectly, unless connected with sounds; and when that connexion has taken place, the system may be called writing, and not before.

Those signs, at first view, (with very few exceptions,) do not appear to exist in the Mexican paintings. Yet if we believe the writers who have treated of this subject, there was much more in them than meets the unexperienced eye. It may not be out of place to put here together the facts asserted by those writers, in a connected point of view.

"The Mexicans," says Baron Humboldt, "had annals which went back to the sixth century of the Christian era.

* Précis du Syst. Hier. 2d Ed. p. 328. When this work is quoted generally, it is always with reference to the second edition.
There were found the epochs of migrations, the names of the chiefs issued from the illustrious family of Citin, who conducted the northern tribes to the plains of Anahuac. The foundation of Tenochtitlan falls into the heroic times, and it is only since the twelfth century that the Aztecan annals, like those of the Chinese and Tibetans, relate almost without interruption the secular feasts, the genealogies of kings, the tributes imposed on the vanquished, the foundations of towns, the celestial phenomena, and even the most minute events which had an influence on the condition of the rising societies."

"We know by our books," said the Emperor Montezuma to Cortez, "that I, and all those who inhabit this country, are not its original inhabitants, but that we are foreigners, who came from a great distance. We also know, that the chief who brought our ancestors hither, went back for some time to his own country; and that on his return, he found those whom he had left married to native women, and having a numerous posterity. They had built towns, and would no longer obey their former master; so that he left them, and returned home alone." This fact is related by Baron Humboldt, who took it from the letters of Fernando Cortez.†

Besides these relations of historical facts, it is said that they had geographical maps;‡ reports or statements of tributes paid to their sovereign by the conquered nations;§ descriptions of the manners, usages and customs of their country;¶ calendars, genealogies;¶¶ a code of laws;** and lastly, pleadings or memorials for courts of justice, which M. de Humboldt calls pièces de procès, of one of which he

* Vue des Cordillieres, vol. i. p. 36. Purchas Pibg. vol. iii.

** Ibid. 171.
gives a fac simile, handsomely engraved and coloured.* He says that those documents were, long after the conquest, exhibited in the Spanish tribunals; and that it was thought indispensable that there should be advocates who could read them.†

We learn from the same authority, that the Mexicans had religious books; but whether ritual, liturgical, historical, or merely devotional, is not ascertained. The manuscript preserved in the Library of the Vatican, and on that account called Codex Vaticanus, and that kept at Velletri, are believed by Zoega, Fabrega, and other learned archæologists, to be what they call a ritual almanac, combining the indication or descriptions of religious rites, with astronomical computations showing when they are to be performed.‡ Another book is mentioned by the same learned author, (which, however is now lost,) called the divine book,§ which was written so early as the year 660 of the Christian era. It is said to have contained the Mexican cosmogony, their mythology and system of morality; the whole in regular chronological order.|| It is difficult to conceive how all these things could have been transmitted from generation to generation by means of mere paintings, or signs expressive only of ideas.

It is said, moreover, that the Mexican books were written or painted on durable and portable materials. Those were, cotton stuffs prepared for that purpose,¶ tanned deer skins, or paper fabricated with the leaves of the maguey, (Agave Americana.)** "They supplied pretty well, (assez bien,)" says M. de Humboldt, "the want of books, manuscripts, and

---

alphabetical characters. In the time of Montezuma, thousands of persons were employed in composing or copying pictures;* in short, those paintings, folded and arranged in a certain manner, were preserved in the form of books, the tout ensemble of which offered the most perfect resemblance (la plus parfaite ressemblance) to our bound volumes."†

We have but little information as to the system on which the Mexicans proceeded in the application of those paintings to the purposes of writing. Some light, though very faint, is however thrown upon the subject by different writers. "Those things," says Acosta, "which had a visible form or figure, were directly represented by their images; and those that had none, were represented by characters signifying them; and by that means they figured and wrote all that they pleased."‡

"We know beyond a doubt," says again the learned Humboldt, "that besides their pictures of visible objects, the Mexicans had simple hieroglyphics, by means of which they recalled the ideas of divers objects that are not susceptible of being painted. Such are the air, fire, water, day, night, midnight, speech, motion. They had also numeric signs for the days and months of the solar year. We even find among them traces (des vestiges) of those hieroglyphics which are called phonetic, and which show a relation (annoncecent des rapports) not with the thing, but with the spoken language. They expressed by that means the names of towns, and those of their sovereigns, which in general were significant."§

According to Antonio de Solis, they went even beyond that; and their pictures, like those of the Egyptians, began to assume the form of writing. "They also had," says

† Ibid. 190, 196.
‡ Hist. de Indias, l. 8.
§ Humb. Vue des Cord. vol. i. p. 190.
this historian, "signs of explication; for the painters employed by Teutile, to give to Montezuma a full knowledge of what concerned the Spaniards, added to their pictures in various places certain characters, which, to appearance, were designed to explain the meaning of what was painted."*

And lastly; among the fac similes of Mexican paintings, given by Baron Humboldt in his Vue des Cordillières,† there is one, copied from a manuscript in the Royal Library of Dresden, the figures of which are of a peculiar character, which makes the learned author hesitate to say whether they are hieroglyphics or a kind of cursory writing, (des caractères cursifs.)‡ It is much to be regretted that the Spanish priests destroyed so many of those precious manuscripts. Why should religion be an enemy to science?

It is to be added, that, like the Egyptians, the Mexicans employed colours in their paintings; but whether for the mere purpose of ornament, or as a part of their graphic system, is, I believe, yet unknown.

This is, I think, all that is known with respect to the Mexican paintings, unless some late discovery has been made that throws more light upon the subject. If we are to believe all that is said above; if neither the conquerors nor the conquered have exaggerated facts; if it be true that thousands of persons were employed in composing or in multiplying copies of those pictures, and that they served as a regular mode of written communication; if, besides the figures and symbols, they had explanatory signs to connect the discourse, (which, however, I have not been able to discover in the pictures that I have seen,) their system was not very different from that of the Egyptian hieroglyphics, and

* Iban poniendo á trechos, algunos caracteres, con que, al parecer, explicaban y daban significacion á lo pintado. Conq. de Mex. l. 2.
† Vol. ii. p. 268.
‡ Ibid. p. 271.
it must necessarily have been connected, by tradition or otherwise, with the spoken language. Its polysynthetic forms, however, are a great difficulty in the way of this hypothesis. I am, nevertheless, inclined to believe in its possibility; and I would recommend to those who may devote themselves to the study of the Mexican paintings, to found their investigation on a full knowledge of the words and structure of the Mexican language.

SECTION IV.

If we admit the Mexican paintings to have been a system of writing, we must also acknowledge, as I have said before, that it bears no small resemblance to the hieroglyphs of ancient Egypt. It does not appear, however, that the Mexicans made use, like the Egyptians, of their painted figures to represent elementary sounds. If their proper names of persons and places were, as is said, significant, they had little use for this manner of writing, which a more extended intercourse with other nations would have made necessary, nay, indispensable to them. They were, to all appearance, in a state of transition between the rude paintings of the savages, and the more perfect system of the Egyptians. Had they been left to themselves, they would in time have improved that which they possessed, as the Egyptians and Chinese have done. A learned Mexican,* well acquainted with that idiom, and who resides in the city of Montezuma, is at present employed in investigating this

subject. He thinks he has already discovered the distinctive signs between substantives and verbs. Success to his labours!

The graphic system of the Egyptians, notwithstanding the important discoveries of Young, Champollion, Salt, and other learned men, is yet involved in much obscurity. Its connexion with the spoken language is only partially developed. But I have no doubt that it exists, and that the hieroglyphic figures do not represent abstract ideas, but the words of the oral idiom. This is, I know, reasoning à priori; but à priori reasoning is sometimes admissible. It is so, when the adverse proposition to that which is maintained is not only improbable, but may be said to be impossible. Now I cannot conceive the possibility of the existence of what is called an ideographic system of writing; and that such was not that of the Egyptians, any more than that of the Chinese, I hope I shall be able to demonstrate.

Every system of writing, deserving the name, is made to be read; not mentally alone, but vivâ voce, and by all in the same words, otherwise it cannot serve the purpose for which it was intended. I would ask how, in a country civilized as Egypt is acknowledged to have been, a herald could have proclaimed an edict of the sovereign, if it had been written in ideographic characters, which every one might have interpreted as he pleased, according to the greater or lesser knowledge that he possessed of the strength and value of words in the spoken language? Heralds or public cryers are not, in general, excellent grammarians. How could a contract between individuals have been drawn up by the most experienced scribe, with the precision required to make its clauses and stipulations sufficiently clear and void of ambiguity? Oral language itself is ambiguous enough; there is no idiom that expresses the ideas of men with perfect precision. The greatest number of the questions which arise in the law-suits that are brought into our courts of
justice, have their source in the imperfection of language, and the different interpretations that are put upon words. Is it to be supposed, that writing would have been so contrived as to increase that ambiguity? The moment you admit any system of writing to be a language, and not the representation of a language, you introduce two languages into the nation that makes use of it, the most perfect of which is the most fugitive, because its errors may be instantly corrected; whereas the other is permanent, and if two parties are interested in its construction, and happen to differ about what it expresses, it can no more be altered than a man's will after his death, and remains for ever a source of contention. It appears to me impossible to believe that a civilized nation ever adopted such a system, to any considerable extent.

Again. M. Champollion tells us, that the priests of Egypt wrote in hieroglyphics (mind, he does not say in the demotic, or epistolographic character,) the sacred rituals, those relating to funerals, treatises on religion and the sciences, hymns in honour of their gods, or the praises of their kings, while all the classes of the nation used the demotic character in matters relating to their private affairs.* M. Champollion does not quote any authority for these facts; but he surely would not have asserted them without some sufficient warrant.

Here, then, we have liturgies, religious treatises, nay hymns, which we may reasonably believe to have been poetical,† written in an ocular language of abstract ideas!

† I have read somewhere, that the ancient Egyptians had no poetry, because none has been found among the papyri that have been hitherto dis-
I have already shown, with respect to the Chinese, what cacophony would ensue in attempting to execute such poetical melodies. Only represent to yourself our hymn books and metrical psalms to be written *ideographically*, and to be sung *ad libitum*, like musical cadenzas, or variations on a given theme. A congregation of poets would be at a loss to find a harmonious reading, and the hymns could only be sung in a translation, which should be either learned by heart, or written in a different character, to connect it with the spoken language. It is impossible to conceive that such things ever existed.

Such, however, would have been an *ideographic* mode of writing, in the sense that is generally ascribed to it. For, let it be understood, that it is not with the word that I find fault, but with its meaning. I care very little about words, except when they lead us into false notions; and such has been the effect of the word *ideographic*. When writers, even the most enlightened, speak of the Chinese and Egyptian systems of writing, they say that they represent ideas; when of a particular character, that it represents such or such an idea; whereas they should say such or such a word or part of a word. It will be said, that the view of the Egyptian graphic system, to which I am opposed, was that of the Egyptians themselves; and Horapollo will be cited as an authority, to which there is no reply. But I mistrust the vanity of the Egyptians, as much as that of the Chinese.

covered. This hasty mode of reasoning is too common among the learned. The same writer perhaps will tell us, that among *all* nations poetry has always preceded prose writings, because it happens to have been the case among the Greeks. But the Mohawks and Algonkins never had any poetry, and we know them to be very eloquent in prose. It is never safe to generalize from insulated facts. Nature delights in variety, and from that variety proceeds the pleasure that we feel in the contemplation of her works. But our theorists would regulate every thing by the square and compass, and can see perfection only in dull uniformity.
Both wished to make their system of writing appear as something mysterious, and as a great effort of the human mind; and they trusted to the credulity and indolence of mankind to make them believe in those absurdities. When Horapollo* tells us that the figure of a bee meant in their language a people obedient to their king, and that a vulture represented the abstract idea of maternity, and a bull that of strength combined with temperance, I cannot give my unqualified assent to these propositions, and believe that those signs might be read by every one as he pleased, provided he did not lose sight of the general idea. I believe that each character or sign had not merely its ideal, but its vocal representative, either in elementary sounds, or in syllables, or in words, or, perhaps, in a limited number of cases, in whole sentences, as we have &c. for et cetera, and other abbreviations of a similar kind. I believe that there was a method taught in the schools at Thebes, Memphis and Alexandria, by which every one could read the hieroglyphic as well as the demotic writing aloud, and in the same words, without the variation of a syllable. Without that there would be no reading, properly so called; there would only be translating.

When I speak of hieroglyphics, I do not mean to include the anaglyphs or monumental hieroglyphs, mentioned by Champollion as a secret sacerdotal writing.† These might be more elliptical than the rest, a kind of short-hand or lapidary, and, to a certain extent, enigmatic style, which tradition enabled the priests alone to understand. There is

---

* I quote this writer at second hand, from Champollion's Précis, 340.
I have not been able to procure that work from Europe. My Hamburg correspondent wrote to me that no such book was to be found in the shops. I presume that all the copies of it are in public or private libraries, and I regret it exceedingly.
† Précis, p. 427.
nothing extraordinary in that; and we know too little about it to make it a subject of discussion. It might not have been intended to be read aloud, but only to be understood by the initiated. On this subject we are left entirely to conjectures.

It seems certain, however, that many of those inscriptions were part of the mysteries of the Egyptian religion, and had a recondite sense not accessible to every one. Those were probably the enigmas mentioned by Clement of Alexandria. Among them I place the celebrated one in the temple of Thebes, as given to us by the same writer.* A child, the symbol of birth; an old man that of death; a hawk for God; a fish for hatred,† and a crocodile for impudence, all put together, signified, “Ye who are born and die,” (in other words, “Ye mortals,”) “God hates impudence.”‡ It is well known that this symbolical method of expressing religious and moral sentences, was a part of their theological system, known only to the initiated. “All their theology,” says Plutarch, “contains, under enigmatical words, the secrets of knowledge.”§ So, it would seem, there were enigmatical words as well as signs. Clement of Alexandria tells us, that those enigmas were, as to their secret and concealed meaning, similar to those of the Hebrews.|| It is to be observed, that the fifth book of the Stromata is dedicated to religious mysteries, and is intended as an apology for the Christians, who at that time had also their own; for it was then believed that no religion could exist without mysteries

† The priests of Egypt would not eat fish, for various reasons, mentioned by Plutarch, De Iside et Osir. Baxter observes, that Plutarch might have added to those reasons, that fish is very unwholesome in hot countries.
‡ Ω γνώμενοι καὶ ἀπογνώμενοι, Θεὸς μίσθος ἀνάδιδαι.
§ De Iside et Osir.
|| Ομοία τοῖς Ε’βραίοις κατὰ γενέσεις ἐκπαιδεύ εἰς τὰ τῶν Ἀλωπτικών αἰνίγματα. Clem. Alex. Ibid.
and secret initiations. The theological science was taught among the Egyptians by means of enigmatic symbols, which could be understood only by means of sacerdotal traditions. Thus Clemens* tells us, that some represented the sun by the figure of a crocodile, which meant, in enigmatical language, that the sun, in its course through the air, generated time;† and this, says he, is according to one of their sacred histories.‡ These sacerdotal enigmas, therefore, should not be confounded with the Egyptian system of writing, although there is no doubt that it borrowed many of those symbols to represent words, it being most probable that the symbols were invented by the priests, as part of their mysteries, before the art of writing became general, and was reduced to a system. But surely afterwards, books, edicts, laws, histories, contracts, and familiar correspondences, intended to be read and understood, could not be written in symbols and enigmas. The Rosetta inscription was an edict of the sacerdotal body, and so we must conclude that even the hieroglyphic part of it was so written as to be understood by all; otherwise, what purpose could the enigmas have answered? Besides, we know from Clement, that this mode of writing was taught in the schools.

I do not mean to deny, that the graphic signs or characters of the Egyptians were formed on a kind of ideographic system; but that was only a mnemonic contrivance, by which they recalled the memory of words, through the medium of images; and that was the only method they could adopt, to avoid confusion, when they had not an alphabet of syllables or elementary sounds. But the ideas or images were only their means to arrive at the vocal sounds, not

* Clem. Alex. Ibid.
† The sun was represented by other figures; but it seems that that of a crocodile was enigmatic, and to be taken only in the sense which the author explains.
‡ Δια τῶν ἱεροτεχνίτων ἱστορίαν. Ibid.
their end. In that limited sense, the word *ideographic* may perhaps be used, but not with the more extensive meaning that has been given to it. When, for instance, Mr. Salvolini, in his learned and ingenious letters to the Abbate Gazzera,* speaks, in almost every page, of Egyptian characters representing *l'idée jour* and *l'idée mois*, we are led to believe, by this mode of expression, that the words *day* and *month* are out of the question; whereas it was those words, and those words alone, that the signs were intended to call to the memory, by means of signs which may perhaps, in some respects, be called *ideographic*, but never in the sense of their representing ideas independently of sounds; and by sounds, I mean the words of the oral language.

The illustrious Champollion himself is not free from the prejudice I am combating. He always applies the Egyptian characters to ideas and not to words, except when employed as letters of an elementary alphabet. Thus, when Horapollo tells us, in terms sufficiently clear, that when the Egyptians write (the word) *mother*, they paint the figure of a vulture, which appears to me to be the same as saying that the vulture is the orthography of the word *mother*, M. Champollion expresses a different opinion, and says that he has found that the vulture is *always* symbolic, and represents the *idea* signified by the word *mother*, (*l'idée mère.*) But he gives no instance of its being employed otherwise than to represent that *word*, by which alone I am convinced that it is to be read, and not by any of its compounds or derivatives, or by any word, other than the word *mother*, bearing any relation to the abstract idea of *maternity*, which Horapollo is reported to have said to be its meaning, but certainly not in the sentence quoted by M. Champollion.†

§ Des principales expressions qui servent à la notation des dates sur les monuments de l'Ancienne Égypte. Two pamphlets, Paris, 1832, 1833.

† Horapollon nous apprend que pour *écrire* mère, les Égyptiens peignoient un vautour. Précis, p. 122. Then the vulture was the character employed to *write* the word mother, and not to represent *l'idée mère.*
But M. Champollion does not stop here. Who will believe that this great man saw ideographic characters even in the statues of the ancient Egyptians? When observing upon the imperfection of their forms, as compared with those of the Greek artists, he accounts for it by saying that those of Egypt had not in view to reproduce and perpetuate the beautiful forms of nature; but that their art was dedicated to the notation of ideas, rather than to the representation of objects. Sculpture and painting never were anything in Egypt but branches of their system of writing.* It would be more natural to say that their writing was a branch of their imitative arts. Men of genius cannot be too much on their guard against the sallies of their imagination; their ideas are greedily swallowed by the small fry of writers, and it is difficult always, and sometimes dangerous, to contradict them.

The study of the writing of ancient Egypt has hitherto been principally directed to the elucidation of the history and chronology of that interesting country. To reconcile Manetho, Diodorus, Julius Africanus and George Synellus with each other, and all with the Table of Abydos, and with historical truth, has been the great object of modern Egyptologists, and they have pursued it with remarkable success. But another object, not less important, claims our attention; I mean the advancement of general philology. It is greatly to be wished that this curious graphic system should be studied with a view to that science, and as a branch of the history of the human mind.

With a view to the object that I have mentioned, it was natural that Egyptologists should turn their first attention

* Cet art (la sculpture) semble ne s’être jamais donné pour but spécial la reproduction durable des belles formes de la nature; il se consacrera à la notation des idées plutôt qu’à la représentation des choses. La sculpture et la peinture ne furent jamais en Egypte que de véritables branches de l’écriture. Lettres à M. le Duc de Blacas, première lettre, pp. 9, 10.
to the hieroglyphic characters in monumental inscriptions, where they were most likely to find the names and titles of the successive sovereigns of Egypt, and the epochs, with perhaps some of the principal events of their reigns. But I doubt whether it is the best course to be pursued in the study which I have recommended. We are informed by Clement of Alexandria, that the Egyptians were instructed first of all (πρῶτον πάντων) in the epistolographic character; that is to say, in the popular, or, as we would call it, the running hand, which of course was the easiest to be acquired. From thence they proceeded to the hieratic, and last of all, the hieroglyphic character.* I am inclined to believe that the course of study which was the easiest for the Egyptians, would be so likewise for us, and therefore I venture to recommend it, though not without the greatest diffidence. As far as I am able to learn, it seems that there is no deficiency of materials, as besides the enchorial inscription on the Rosetta stone, with its Greek and hieroglyphic counterparts, numerous rolls of papyrus have been discovered in the catacombs of Thebes and elsewhere, among which are bilingual documents in Coptic and Greek. Enough remains of the ancient idiom to aid us in that investigation, and I have no doubt that, if zealously pursued, the success that it would meet with would amply reward the labour bestowed upon it.

We are informed by M. Klaproth, that Messrs. Silvestre de Saecy and Akerblad, in France, and Dr. Young in England, were once employed in the study of this style of writing; and he adds, that they pursued it with perseverence.† No trace of their labours, however, remains, which is greatly to be regretted, and particularly that they suffered themselves

* Stromat. 5. p. 555.
† Les écrites cursives étaient à cette époque (about 1820) l'objet de travaux poursuivis avec persévérance par plusieurs savants, tels que MM. Silvestre de Saecy et Akerblad en France, et Dr. Young en Angleterre. Klaproth, Examen critique des travaux de feu M. Champollion, p. 3.
so soon to be discouraged; for their 
perseverance does not
appear to have lasted a great while.

Dr. Seyffarth informs us, that in the Royal Library of
Berlin there are no less than fifty-seven rolls of papyrus,
written of course in the ancient Egyptian language and
character, some of which are not less than thirty feet in
length, with few exceptions closely written, so that it is
difficult to find in any other writing so many ideas and words
brought together in so small a compass.* Some are in the
hieroglyphic, others in the hieratic and in the enchorial
character. However it may be, I think no one will pretend
that those characters, not sculptured on monuments, but
written on rolls of paper, represent abstract ideas in the
shape of metaphors and enigmas, and not in the forms given
to them by the articulate sounds of the spoken language.
To work, then, noble Prussians; sagacious, learned and in-
defatigable Germans! Cease to look in those writings for
ideographic signs, which present nothing definite to the
mind of the reader, and apply yourselves to finding out the
connexion between the writing and the language, for such a
connexion must and does certainly exist. Do not be fright-
ened by the obstacles which a learned writer, indeed, but
too intent on depreciating the labours of his great rival,
Champollion, has placed in dread array before you.† The
task is difficult, but success is not impossible. To work,
then, ye Germans, and may God prosper your labours!

I have been led, my dear sir, much farther in this disqui-
sition than I at first intended, and yet I am not willing to
drop it. I must demolish entirely, if I can, the still prevailing
notion of an universal system of writing, of ideographic
characters presenting a complete language to the mind with-
out the intervention of articulate sounds, nay, without any

* Bemerkungen über die Ägyptischen papyrus in der K. Bibliothek
zu Berlin, p. 1.
† Klaproth, ibid. p. 148.
connexion with them in the shape of words or otherwise. I must show, by multiplied examples, that words, articulated words, are the foundation of all writing; and that whatever graphic system, figurative or otherwise, may be adopted, its only object is to express or represent words, and through them ideas, in the forms which spoken language has invented. This I meant originally to do only through the comparison of the Chinese and Cochinchinese, by means of the documents submitted; but as, in the course of my discussion, the Egyptian has intruded upon me, I cannot avoid strengthening my argument by comparing its system with that of the Chinese, and showing that they have both proceeded to obtain the same object by the same road, as far as the structure and genius of their respective languages permitted them so to do. Again, therefore, let me request your further indulgence.

SECTION V.

In the first place it must be observed, that the Chinese, and the Coptic or ancient Egyptian, differ essentially in their structure, the former being monosyllabic, and the latter polysyllabic. Some writers, and among them some of the most eminent philologists,* have conjectured, I think without sufficient foundation, that all languages, and especially the Coptic, were originally monosyllabic. I do not

* The learned Eichhorn, who maintains this doctrine, infers from it that the primitive language consisted only of monosyllables. Geschichte der neuern Sprachenkunde, p. 17. I can perceive no reason for such a supposition. The name of the first man, Adam, is dissyllabic; and the word Adamah, from which it is said to be derived, has three syllables. The most ancient names in profane history are also, for the most part, polysyllabic. As in religion, there are superstitions in science.
coincide with them in that opinion, being a believer in the permanency of grammatical forms; but as this has nothing to do with our discussion, I shall not say anything more about it.

The Coptic language, notwithstanding its polysyllabic character, is well adapted to the graphic system commonly called hieroglyphic, which it once adopted. Its grammatical forms, by which the ideas of gender, number, case, persons, tenses, moods, &c., are conveyed to the mind, do not, like those of the Greek and Roman languages, consist of inflexions, by which the sounds of the radical words are varied, and sometimes obliterated; but they are represented by particles prefixed or affixed, or (as in our Indian languages) infixed in the middle of the principal word, which remains unchanged, and therefore can be easily separated from them. Father Kircher, in his short Coptic Grammar, gives us examples of about one hundred and thirty-five of those particles,* and explains their use. Hence it follows, that the written characters may, without the least inconvenience, represent each a radical word, a noun or a verb, or one of those prepositions or qualifying particles, and that, I am inclined to think, is the ground of the system. M. Champollion, with great sagacity, has discovered a great number of those particles in the Egyptian writing.† This discovery has been contested by some learned writers, as not sufficiently proved;‡ but it appears to me that he has made it out in a clear and satisfactory manner.

As a matter of curiosity to us Americans, showing the similarity of some of the Coptic forms with those of our Indians, permit me to add, from the book above cited,§ the declension of a noun, with the possessive pronouns inter-

* Prodrom. p. 32.
† Précis, chap. v.

It would seem that os is the root of this word, and that P is a prefix indicating the sex or gender; for in the feminine, my lady or mistress is taos, and T is known to be the sign of the feminine, as P of the masculine gender.*

So far the Chinese and Coptic languages resemble each other, and if they differ in any thing, that difference is not

*Kircher, Prodrom. p. 305.
material to my argument. The Chinese words are all monosyllabic, and the particles which express the different relations are so likewise, and are in fact *words*;* they have their appropriate signs or characters, as well as the principal locutions, because they are or may be entirely separated from them. For, as M. Remusat well observes,† it is only in writing that they are separated; and who can tell how it would be under a different graphic system? In speaking, the particle and the word which it qualifies may be considered as one. The Coptic has existed under two different graphic systems. With the alphabetic characters introduced by the Greeks, the particles and the words to which they are attached appear as one polysyllabic word; under the figurative system it might have been otherwise, though the particles do not all appear of themselves to be significant, yet they might have been separately represented. In this power of separation consists the similarity between the two languages.

Supposing that the particles are always considered as parts of the words to which they belong, it is enough that they be separated by a mental operation, to justify and indeed to suggest the application of different characters to them. In this last supposition I should not call the Egyptian writing, as I have done the Chinese, lexigraphic. I would try to find some more appropriate epithet whereby to distinguish it, which, however, cannot be done until we are better informed of the nature and character of this graphic system, and of the method which it employs to represent the sounds of the language, whether in the form of words, of syllables, or of other component parts of speech, or by a mixture of several of those forms; a study well worthy the attention of the philologist, and which the discoveries of Champollion and his fellow labourers give us reason to hope will be suc-

† Mélanges Asiat. vol. ii. p. 47.
ceeded by others, by means of which the great problem will at last be completely solved, and the writing of the ancient Egyptian fully understood.

Let us now see how the Chinese and the Egyptians, possessed of such languages as I have described, may be presumed to have proceeded, in order to recall to the mind, by means of written signs, the sounds of those languages as they were combined in the form of words.

Had those nations possessed inflected languages, like the Greek and Latin, their task would have been much more difficult to perform. I am strongly inclined to believe, that it was the difficulty of representing, by ocular signs, the various and complicated grammatical forms of certain languages, which led to the discovery of the syllabic proper and of the elementary alphabets. The multitude of words which those forms presented to the ear, made the nations who spoke them despair of recalling them to the mind through the organs of sight, in any other manner than by analysing their sounds, and affixing a character to each element. Some stopped at syllables, probably in languages where they were not exceedingly numerous, as we have seen it to be the case in the Cherokee, and as it is in the Japanese, which has only forty-seven syllables;* others, on the contrary, when, by the intermixture of vowels and consonants, syllables appeared to exist in too large numbers to be easily arranged into an alphabetical system, proceeded further in their analysis, and no doubt were greatly astonished when they discovered the very small number of pure elementary sounds of which human language is composed. This led them naturally to the formation of elementary alphabets. It was not the case, however, with all nations; for we find that the Mexicans, with a language so

compounded as to be properly called *polysynthetic*, and consisting of words of an immense length, have proceeded no farther than to a system, analogous, as far as we know, to that of ancient Egypt. But to inquire into the causes of these various results would lead us too far from the subject I am treating of.

There is no doubt that alphabetical writing is, for certain purposes, the most adequate method of representing or recalling to the mind, through the eye, thoughts or ideas already fixed by oral sounds. In proof of this assertion, it is sufficient to instance proper names of persons and places, and those of the numerous species and varieties of natural objects, which can only be represented by signs or characters indicative of simple sounds. Hence we find, that both the Chinese and Egyptians were obliged to have recourse to that method; but they fell upon it at an advanced stage of civilization, and too late to make them abandon their former system, to which they had long been accustomed, except when absolute necessity compelled them to it. They were misled at first by the apparent facility of adapting the *pictorial system* to languages, composed of short words, which they thought susceptible of being easily represented by figurative signs. At the same time, it cannot be denied that the lexigraphic system is well adapted to the structure of their language, and that it is only deficient with respect to proper names or new objects, and the representation of the sounds of foreign idioms.

Such was the case with the Chinese and the Egyptians. They both began, like all savage nations, with rude pictures of visible objects. But those kyriologic signs, παισέως, as Clement of Alexandria calls them, which expression I would render by *mimic signs*, could not carry them very far; for visible objects of various kinds have often the same form, and it is no easy matter to distinguish them to the eye. The sun and the moon are round, but so are nuts,
apples, and a multitude of other things.* Hence they were soon compelled to have recourse to allegories, metaphors, and a variety of other figures; and to invent a system, by means of which they might make them subservient to their purpose. Although their idioms resembled each other, as I have shown, in a most important feature, yet in the details they differed, and those differences, though they pursued the same general system, led them into different roads. This requires some explanation.

The Chinese language, and particularly the Kou-wen, which was first in use, is essentially elliptical. It wants grammatical forms to express the various shades of ideas, and leaves them to be gathered from the relative position of the words, and the sense of the context. This ambiguity, as to us it appears to be, who are accustomed to more precise forms of language, is increased by the great number of homophonous words, not even varied by their accents. This has led sinologists to believe, that the Chinese writing was intended to correct that ambiguity, and it has been said that so insufficient are the words to convey ideas, that the Chinese are often obliged to explain their meaning by tracing characters with their fingers in the air. That this may happen, sometimes, as in our languages we spell one out of several homophonous words to specify its meaning, may perhaps be believed; but it must be a thing of very rare occurrence. Besides, the Chinese have a very easy way, which I shall presently mention, of explaining verbally the meaning of their ambiguous words, without being obliged to trace figures in the air. And here I cannot help observing, how easily men of learning are imposed upon by travel-

* The arms of the Penn family are three nails, the round heads of which alone appear on the scutcheon. Hence they are generally taken to be balls, like the palle of the Medicean family. But the motto of the old Admiral sufficiently explains what they are, Dum clarum teneam, "While a single nail remains, I will not give up the ship."
lers and other dealers in wonders. The Chinese understand each other when speaking, quite as easily as other people. Their language, like all others, was made to be understood, otherwise it would not be a language. I have known Chinese, and heard them converse with each other with the greatest fluency. I asked them whether they found any difficulty in conveying by speech any idea they thought proper; they answered me, not the least. I frequently asked the same question of our Indians, who uniformly answered in the same manner.

The system adopted by the inventors of the Chinese mode of writing, as it now exists, was that of recalling the words of the language to the memory of the reader by signs, descriptive, as much as possible, of their signification. By this method, they gave an advantage to writing over speech; for while the language was filled with homophonous words, the signs which represented them were not (if I can use the expression) homomorphous, and the eye could distinguish them from each other, though the ear could not. This advantage, however, has been greatly exaggerated. M. Remusat contends, that it is from it that the Chinese language derives all its clearness.* It is precisely as if one were to say, that the clearness of the English language is derived from our various modes of spelling homophonous words; as, for instance, bow (arcus) and beau; bow (signum reverentiae) and bough, &c. This may be pleasing to the eye, but has nothing to do with the clearness of the language. He who understands it when he hears it spoken, may also understand it when he hears it read, and consequently when he reads it himself. All our homophonous words are not distinguished in writing by a different orthography; the

word *sound*, for instance, when used as a substantive, means the effect produced by noise, or the name of an arm of the sea; as an adjective, it means healthy, right, proper; in theology, it means orthodox; and lastly, as a verb, it means to produce noise, to try depth, to endeavour to discover the sentiments of others; yet in all these cases the word is spelt in the same manner, and no confusion ensues. Nor would it in the Chinese, if one character only was employed to represent all the words which are pronounced in the same manner. M. Remusat himself gives us a fact in support of this proposition, too strong to be omitted. He says, that at this time the merchants, mechanics, and other unlettered men in China, paying very little attention to the symbols, are contented with making use of one single character for each *pronunciation*, in whatever sense the syllable may be used, while the literati write them with different characters.*

Now, nothing can be more plain, than that if any thing peculiarly requires clearness in the mode of writing, it is the contracts of merchants and mechanics, and their correspondence on matters of business. This fact appears to me sufficient to settle the whole question.

Then the Chinese might as well, as far as clearness was concerned, have affixed a single sign or character to each syllable or word of their language. The same rules of syntax which enable the hearer to understand words spoken, would have helped him to their meaning when written. But the number of monosyllabic words was too great to admit of their being represented by arbitrary signs, which memory could not easily have retained, and which would not have been susceptible of classification. For the sake of

* Actuellement même, les marchands, les artisans et autres hommes illettrés, se contentent de savoir un seul caractère pour chaque prononciation, et ce caractère leur sert pour toutes les acceptions de la même syllabe, qui, chez les gens instruits, s’écrit avec autant de caractères différents. Ibid. pp. 72, 73.
method, therefore, they fell upon their present system, which is as well adapted to the nature of their language as that of the Egyptians to their own. Whenever a word wanted a sign to represent it, they had nothing to do but to write two or more other words already provided with signs, to recall, by a kind of definition, the memory of that for which a character did not yet exist. Thus, if they want to represent the word foo or fou, which means a married woman, they write in the appropriate characters the words woman, hand, broom, as much as to say, a woman who keeps her house clean, a matron, a housekeeper; but that group of characters is not read literally; it is read foo, and means a married woman. The words sun and moon, grouped together, are read ming, which signifies light; man and mountain, are read hermit; mouth and bird, are read song; ear and door, to hear; water and eye, a tear or tears.* It must not be believed that the Chinese read those definitions even mentally, any more than we advert to the etymology of our compound words; this manner of distinguishing the characters has only served the inventors as a method to avoid the confusion of mere arbitrary signs, and their grammarians afterwards have classed them into families of roots or radical signs or characters, as they are called, by means of which they are able to find them easily, in a kind of regular order, in their dictionaries, thus supplying the want of an alphabetical method.

A Chinese writer, in a short essay of two pages, which Dr. Morrison has published at the head of his Anglo-Chinese Dictionary, under the title of "Brief explanation of an alphabetic language (system of writing) as exemplified by the English," has come very near to the opinion which I have expressed. Dr. Morrison has not subjoined a translation to that paper; he has published it only in Chinese. But M.

Remusat, in his Mélanges Asiatiques, has given us an extract from it, sufficient to make us know the sentiments of the author. The title of this essay, as translated by him literally, is, “A short introduction to the knowledge of the letters of the kingdom of England.” The author institutes a comparison between the alphabetical system, generally considered, and that of his own country. “There are,” he says, “but two systems of writing; the one which represents the sounds of the words, and the other their meaning.”* Among the former he includes the syllabic alphabets of India and the elementary alphabets of Europe, and among the latter the Chinese writing and the hieroglyphics of ancient Egypt. He admits that it is difficult to decide as to the preference to be given to one over the other, as they both have their advantages and disadvantages. “The characters,” says he, “which represent the meaning, do not express the sounds, and yet both must be committed to memory.” This truth is incontestable. “Besides,” continues he, “this faculty of representing the meaning, is not applicable to the ideas which the mind conceives, independently of the existence of things; those which designate material objects have, on the other hand, a great advantage.”†

It is evident this author well understood that the Chinese

† Ils (les systèmes d’écriture) se réduisent à deux, l’un qui représente les sons des mots, et l’autre qui en exprime le sens. Parmi les premiers on cite les caractères fan ou Sanskrits, ceux mandchoux, ceux des ying ou Anglais, et ceux des autres Royaumes occidentaux de l’Europe. Quant à ceux qui expriment le sens des mots, ce sont les anciens caractères du Royaume de Yi-i-chi-pi-to (Egypte) et les caractères anciens et modernes de la Chine. On serait assez embarrassé de déterminer la préférence à accorder à l’un de ces systèmes, qui ont leurs avantages et leurs inconvénients. D’ailleurs cette faculté représentative du sens, ne s’applique pas aux idées conçues, par l’esprit, indépendamment des choses. Ceux qui désignent les objets matériels ont, d’un autre côté, un grand avantage.— Remusat, Ibid.
characters represent words and not ideas. "Ideas," he says, "cannot be represented by written signs, as they appear to
the mind;" from whence it follows, that they can only be
represented in the forms in which words have clothed them.
"The characters," he says further, "do not present the
sounds of the words, but their meaning." What he calls their
meaning, is expressed by characters formed of the words
which the signs represent, and not by external forms, which
present nothing to the mind except the words to which they apply; as to simple characters, which are comparatively few, they also present nothing to the memory but the
sounds of the words they are meant to express, precisely as
our letters represent the elements of those sounds. To those
characters alone which designate material objects, that is
to say, to picture writing, he allows the advantage; and it
is clear that he had then in view the hieroglyphs of Egypt,
or some of the ancient Chinese signs now out of use, as he
well knew that the forms of the present characters no longer
represent the figures of visible objects. On the whole, these
admissions of a Chinese writer, those lights which shine in
the midst of his native prejudices, I cannot but consider as
a powerful support to my argument.

It is remarkable, that while in the last century the learned
were expatiating on the wonderful properties of the Chinese
system of writing, an illustrious philosopher, ignorant of the
language, and who does not appear to have paid any par-
ticular attention to the subject, by the mere force of his
genius penetrated into the true character of that system,
and described it in a few words, to which no attention seems
to this moment to have been paid. I mean the celebrated
J. J. Rousseau, of Geneva. That great man, it is true, too
often suffered his eccentric imagination to carry him beyond
the bounds of reason and even of common sense; but, in the
midst of those aberrations of his powerful mind, he scattered
here and there some profound thoughts, of the value of which
he was not himself sensible, but which, if developed and diluted into volumes, would establish the reputation of an intelligent and skilful plagiarist.

Such is the description which he gives of the Chinese writing, in his essay on the origin of languages; a work, it is true, like those of Plato, full of wild and fanciful ideas; but also, like those of the Greek philosopher, full of admirable truths. Thus, while speaking of languages, he tells us, in one of his romantic flights, that the first words spoken in the northern regions were aidez moi, and in southern climes aimez moi,* in the same work he throws carelessly, as it were, and in a few words, a flood of light on the nature and character of the Chinese system of writing.

He divides the graphic systems in use among mankind into three classes. The first is the hieroglyphic, of which he speaks like those who preceded him; and the third is the alphabetical, of which he says nothing worthy of remark. The second is the Chinese, and on this we must hear him speak.

"The second method," says he, "is that of representing words and propositions by conventional signs, which can only be done when the language is entirely formed, and when a whole people are united by common laws; for there is here a two-fold agreement. Such is the writing of the Chinese, and that is truly to paint sounds, and speak to the eyes."† Let us dwell upon this for a few moments.

1. The Chinese characters paint sounds and represent words. This is precisely what I have been labouring to

* Essai sur l'origine des langues, ch. x. in fin.
† La seconde manière est de représenter les mots et les propositions par des caractères conventionnels, ce qui ne peut se faire que quand la langue est tout à fait formée et qu'un peuple entier est uni par des lois communes; car il y a déjà ici double convention; telle est l'écriture des Chinois, c'est là véritablement peindre les sons et parler aux yeux. Ibid. ch. v.
prove. Rousseau does not speak of ideas; his intuitive genius told him that ideas could not be painted.

2. They also represent propositions. So do the groups of characters which distinguish homophonous words from each other. I have instanced the character foo, a married woman. It is formed of three others, those of woman, hand, and broom, therefore the group represents in elliptic form the proposition a woman holding a broom. I have explained the object of this mode of discrimination; it is the orthography of the Chinese.

3. This mode of writing is only suited to a language entirely formed. Therefore language preceded the writing, and writing was made to represent the sounds or words of which language is composed, and not ideas abstracted from them.

4. And to a people united by common laws; that is to say, to a civilized people. Savages could not have invented this system of writing.

5. There is here a two-fold agreement. This is very clear; the language was first agreed upon, and the writing afterwards. They could not have both been invented at the same time, much less the latter before the former.

Here, then, all that I have been endeavouring to prove in this long letter, appears to have been expressed in a few words by an illustrious philosopher, whose intuitive mind perceived, at a single glance, the nature of a system which others were labouring to involve in mystery, and to explain by opinions opposed to every principle of reason and common sense. His lucid exposition was not noticed, or perhaps was smiled at by the philologists of his day. I hope their successors will do him justice. Let us now return to the Coptic.
SECTION VI.

This language, which M. Quatremère* has clearly proved to be the ancient Egyptian, has not come down to us entire, but much mixed with Greek words and locutions. Even Greek adverbs and particles, such as ἀλλά, γὰρ, καίρος, have crept into it, which makes me believe that it became at last a partially mixed idiom, like the German in the interior of Pennsylvinia, which is not only spoken, but written in newspapers and in translations from the English. Nevertheless, in the state in which we possess it, the structure of the language does not appear to have suffered any material alteration, any more than that of the German in our country, which is still preserved, notwithstanding the introduction of English words. The same may be said of the French in Canada and Louisiana; and it corroborates my opinion of the tendency of languages to preserve their original structure.

I have been asked how it happened (if my theory be correct) that the Latin language has lost so many of its forms, in the modern Italian, as well as in the French, Spanish, Portuguese, and other languages derived from it. I do not mean to deny the power of invasion and conquest; it may modify the forms as well as the words of a language; nay, it may destroy it altogether. The Coptic language has vanished before the Arabic, and is no longer in existence. But these are the effects of force, which do not in the least militate against my theory; it remains unimpeached, whenever violence has not interfered, and even in many cases when it has. The Basque language, for instance, driven from Spain and Aquitain, and perhaps from several other parts of Europe, has taken refuge in the Pyrenean moun-

tains, where, after many ages, it still preserves its original structure. Many other similar examples might be adduced.

We may, therefore, have a correct idea of the grammatical character and forms of the ancient Coptic; it indeed adopted Greek words, but we find in it none of the inflexions of the Hellenic idiom, and nothing of its manner of compounding words by altering the syllables of the component parts. The Coptic appears to be formed on the model of the Hebrew, Chaldaic, Arabic, and other neighbouring languages. If I should be asked why all those nations having languages formed on a similar or analogous system, did not all adopt the same mode of writing, I can only conjecture that the Egyptians invented their own, and the Hebrews, Chaldeans and Arabs received theirs from other nations, or, perhaps, discovered sooner the defects of the mimic, or, as it is called, hieroglyphic writing, and rejected it before long habit had endeared it to them, and made it a kind of second nature. Although the different forms of their languages led the Egyptians and Chinese into different roads, while they agreed in the general principle of their graphic system, it does not follow that the various structure of languages was the only, or even perhaps the principal cause that induced nations to adopt a particular system of writing in preference to another. It is very seldom, if ever it happens in human affairs, that effects are produced by a single cause, and the same cause does not always produce similar effects. The road of conjecture is dark and intricate, and when I presume to offer mine, it is always with due diffidence, and I am far from wishing to have them considered as axioms.

Although we are sufficiently acquainted with the ancient Coptic language to form an idea of its structure and grammatical character, it is not so with its graphic system, before it adopted and substituted for it the letters of the Greek alphabet. The Rosetta inscription, and the discoveries to which it has led, have thrown some light upon it, but still
it is no more than a glimmering light. It would rather seem that it did not adopt the Chinese plan of stringing two or three words together, in order, by a kind of lame definition, to recall the memory of a third or fourth. The Chinese words when spoken are simple, when written compound; while, on the contrary, the spoken words of the Egyptian are compounded in the same manner as the Chinese characters, and their graphic signs, as far as we know, represent words singly, and not by means of a compound form. M. Champollion is of opinion that those groups of signs which, in the Chinese, represent a word by attempting to define it, are not found in the Egyptian writing; so that it would appear, that a word might be represented by a compounded character; as, for instance, when the word \textit{day} is represented by an open oblong square and a closed semicircle, but that the two signs thus grouped together should be only metaphorical, and not intended to define the word day by the signs of two other words. This opinion of M. Champollion is not without plausibility, because the Coptic language, not consisting, like the Chinese, of great numbers of homophonous monosyllables, there seems to have been no necessity to explain their meaning by verbal definitions, as the sense of each word was sufficiently understood by the analogies of the language, without having recourse to that method. Nevertheless, we have not yet sufficient facts before us to enable us to form a decided opinion upon this question. The system of \textit{definitions} might have been adopted by the Egyptians as well as by the Chinese, for the sake of method, and to avoid confusion. Mere arbitrary signs, and even pictures, when numerous, are difficult to be classed and to be retained in the memory.

It is curious to observe that the Chinese, in forming their system of writing, followed the same plan in representing

* Précis, p. 346.  
† Salvolini, Letter I. p. 12.
by signs the monosyllabic words of their language, which
has been universally adopted in the formation of the words
of polysyllabic idioms; that is to say, by so compounding
them, as by the composition to define their meaning. Thus
the Latin word *concordia*, formed of the words *with* and
*heart*, represents the *union of hearts*, which is nothing else
than a definition of the compound word. In our modern
languages, derived from the Latin, Greek, Saxon, &c., these
definitions can, in most cases, only be perceived by recur-
ring to the etymology of the compound; but they neverthe-
less exist, and it is evident that without them no polysyllabic
language could have been formed. To illustrate this view
of the subject, permit me to place here some examples of
the Egyptian compound words, compared with the Chinese
written representation of their spoken monosyllables.

It would be easy to collect an immense number of these forms, as the great mass of the Chinese characters is thus compounded, but these will be sufficient for my purpose. It is often difficult to find the chain of ideas which has led to the formation of these characters.

These facts have not escaped the observation of the sagacious Champollion; but the inference that he draws from them, and which he applies to *all* hieroglyphic characters, or, as he calls them, *caractères figuratifs*, though I do not mean to contest its application to the Chinese method of writing, is perhaps too general; because, I must here again repeat it, it is sounds or words that those characters are intended to recall to mind, and ideas only through them.

"In *those systems* of writing," says the illustrious author, "the order of nature in forming oral languages is necessarily followed. For instance; as languages begin with *onomatopeias* or imitations of sounds, ocular systems begin with the direct representation of visible objects, whence they proceed to allegories, metaphors," &c.*

I shall not inquire into the correctness of this principle,

* Précis, p. 333.
as applied to the Egyptian hieroglyphics; it does not appear to me by any means to be proved. I am rather inclined to believe, by the comparison of the graphic systems of China and Egypt, that those nations do not pursue entirely the same road, and that the genius and grammatical forms of their languages required, or at least produced, different methods of presenting the words to the eye. Thus the Chinese define their monosyllables, and explain their meaning, by combining the signs of other monosyllables, which is exactly the counterpart of the system of the Egyptian spoken language, in which the polysyllabic words define themselves, exactly as the Chinese characters define their monosyllables. But it is not yet clear that the Egyptians, in their system of writing, have followed the same course, though I do not mean to deny it; it is not impossible that they may have done it partially.

If the Egyptians had meant to adopt as a general principle that on which is founded the graphic system of the Chinese, they would, for instance, in order to represent the compound word heavy heart, which we translate by patient, have grouped together the sign or character representing the word heavy and that of the word heart, or presented them successively. Whether they have done so or not does not yet appear. It is worth the inquiry of philologists, and the solution of this question may be the means of further progress in the deciphering of the Egyptian inscriptions and manuscripts. In this attempt, the language and its grammatical structure and forms should never be lost sight of; nor should it be forgotten, that the object of all graphic systems is to represent words and not ideas, and that the figures and other imitative signs that are employed for that purpose are only the means and not the end. Even the rude pictures of savage nations differ only from the more perfect systems in being more elliptical. They bring to the mind a few catch words, out of which a sentence is formed; but
they can never serve for any extensive purpose of written communication. It appears to me indispensably necessary to a system of writing, that it should be in some way or other connected with the sounds of the language, whether in the form of words, syllables, or primary elements.

But here a difficulty occurs, even in our own alphabetical method. There is no language on the face of the earth that possesses all the sounds that can be uttered by the human voice. The phonetics of nations differ as much as their countenances and external appearance. In vain we may invent new signs and new characters, to represent sounds to which our ears and our vocal organs are not accustomed; in vain we may adopt for that purpose new systems of orthography; we may multiply accents, apostrophes, and other designations of such sounds, we only torture the eye, without conveying any thing to the ear. All such attempts appear to me to be idle, and can only gratify the vanity of authors. All that we can obtain, by our utmost efforts, is a certain approximation, and with that we ought to rest contented. We have long been accustomed to the name of Mahomet, but we have now twenty ways of writing it, in order to display the Arabic learning of the inventors of the new orthography. We have been long satisfied with the Alcoran, but now we have the Koran, the Khoran, the Qoran, the Koraun, the Korân, and what not?* When will pedantry be banished from the republic of letters?

The same difficulty occurs in the Chinese and Coptic systems of writing, and to a greater extent, because they want the proper signs of elementary sounds. It is curious to compare those nations in their efforts to overcome this difficulty.

* The reason which is generally given for saying the Koran, and not the Alcoran, is, that it is to avoid an unnecessary duplication of the article. But how is it in almanac, algebra, alkali, &c.; must we also contract these words? O vanas hominum mentes!
The Egyptians represent each elementary sound by the sign of some word beginning with it; as for instance, the sign of the word lion, whether it be the figure of the animal or some other allegorical or metaphorical sign, will stand for the letter L; the sign of the word onion, or that of ostrich, for the letter O, and so forth. M. Champollion tells us, that these alphabetical signs or characters constitute two-thirds at least of the language,* as he calls it; by which I understand, that in a page of writing, two-thirds at least of the figures or characters are used alphabetically, or phonetically, as Egyptologists express it; which I am very much inclined to believe, as their hieroglyphics, not defining, as we suppose, like the Chinese character, the word which they represent by the combination of the signs of other words, too large a number of them would have created confusion and occupied an immense space, and therefore they were sooner obliged to have recourse to an alphabet. Whether the method they employed was convenient or not, it is not for us to inquire, as it has nothing to do with the present discussion.

The Chinese have two modes of alphabetical writing; the one syllabic, the other elementary. The first, called Hing-ching, is principally employed to express the specific names of animals, plants, minerals, and other objects. The syllabic character is joined to the generic name, without regard to what it is singly meant to express. Thus the word pe singly signifies white, and it also signifies the tree called cypress. In the latter case, the character will be composed of the sign of the word tree, and of that of the adjective white; but it will not be read tree-white, but cypress. It is the same with the specific names of birds, fishes, &c.; the

* Précis, pp. 102, 125. Elsewhere, p. 447, he says: Les caractères figuratifs et les caractères symboliques sont employés, dans tous les textes, en moindre proportion que les caractères phonétiques.
sign of the word bird or fish is joined to that of any mono-
syllable, whatever may be its meaning, that is homophonous
with the name of the fish or bird which is to be recalled to
the memory. M. Remusat says, that the words thus syllab-
ically expressed form at least one-half of what he calls the
written language.*

With regard to foreign names or words which do not oc-
cur in their own language, they have a different method,
which is more complicated, but which, however, serves
their purpose. The Chinese language abhors syllables
ending with a consonant; all those of which it is composed
are formed of a consonant and a vowel sound, either simple
or nasal, such as ko, lee, ching, foong, &c. When they have
to write a foreign name or word alphabetically, they begin
by dividing it into syllables to suit their pronunciation. The
word Christus, for instance, they will divide in this manner,
ke-le-se-too-se, and write down each syllable as follows:
They take two Chinese syllables or words, without regard
to the meaning, one of them beginning with the consonant,
and the other with the vowel of the syllable to be express-
ed.† For the first syllable of Christus, divided as above,
they will write ko-le, which two words will signify, if you
please, the one cabbage, and the other pumpkin, and add
a character which means divide.‡ The reader is thereby
informed that he must read alphabetically. He will take
the k from ko and the e from le, and read ke, and so on with
the other syllables, until he has made out the whole word.
There is a certain number of characters specially applicable
to that purpose, some of them intended to represent or indi-
cate the initial, and others the final sound, of the syllable
meant to be expressed.§

The Chinese have a particular mode of representing

the sounds of foreign names, the component syllables of which exist in their own language. It is by writing successively the syllables of which the name is composed, without regard to their meaning. Thus they will write in this manner the name of Washington.

wa which means a brick
shing the name of a measure for grain and liquids
tun* grass growing

But in that case they will, like the Egyptians, surround the name so written with a frame, which the French call cartouche, in order to inform the reader that nothing but sounds is meant to be represented.

The Egyptians, as I have said before, represent elementary sounds by figures, the names of which, written alphabetically, begin with the letter or sound to be represented. Thus a lion or a lamb will stand for the letter /, a mountain or a mouse for m, &c. But whether, like the Chinese, they have a mark or sign, (other than the cartouche, which they also make use of for proper names,) to inform the reader that the characters are alphabetical, does not yet appear.

"Almost nothing of the kind," says Champollion, "is observed in the hieroglyphic texts of the Egyptians."† Until this fact is ascertained, we cannot expect to make much further progress in the deciphering of the Egyptian hieroglyphics.

But it is time that I should leave this long digression, and proceed as fast as I can to the conclusion of this letter, which already exceeds all reasonable bounds.

* These three syllables or words will be found in Morrison's Chinese and English Dictionary, in which the words are classed in the order of our alphabet.
† On n'observe, en général, presque rien de semblable dans les textes hiéroglyphiques Égyptiens. Précis, p. 346.
SECTION VII.

I find, my dear sir, that I have gone through a wide field of discussion. I have wandered from the Chinese to the Mexican, from that to the Egyptian, and back again to the Chinese, and yet I have not touched on the main subject of this communication, which is to consider whether and how far the Chinese writing is read and understood by nations who speak different languages from the Chinese, and who cannot either speak that idiom, or understand it when spoken. I cannot close this letter without saying something upon this interesting question, which I submit, however, to the further investigation of the learned; and, to assist them in it, I present to the Society the two annexed vocabularies.

That a language may be read and understood, and even written by persons who cannot speak it, or if they do speak it, who cannot understand each other, because of the difference in their mode of pronunciation, is a fact so common, that examples of it need hardly be adduced. An Englishman and a Frenchman, both good classical scholars, cannot, without great difficulty, understand each other when speaking Latin. I believe there is not an orientalist in the universities of Europe, who, unless he has resided some time in the East, can hold a conversation in Arabic or Persian; and there are excellent translators of modern European languages who cannot speak a word of the idiom that they translate from. I have been assured that M. Le Tourneur, who translated into French Young's Night Thoughts and all Shakspeare's plays, was quite a stranger to the English spoken language. He had learned to read and to understand the meaning of the groups of letters, to which he applied the sounds of his native tongue. He did not consider those groups as images or symbols of ideas, but as the representatives of words, which he understood, but could not
pronounce so as to be comprehended by a native Englishman; nor were his ears so accustomed to the sounds of the language, as to enable him to understand it when spoken.

It may also be observed, that those nations who speak sister languages, or languages derived from the same stock, understand a great deal of each other's written dialect. As the English has borrowed much from the French language, a native of France will understand all the French words in an English book, except when used in a different sense from that to which he is accustomed. No doubt, all these things must operate among the nations bordering upon China, particularly those whose languages are monosyllabic and dialects of the Chinese; but I am of opinion, that as in our languages, these causes can only operate to a certain extent, and that the Asiatics are not more assisted by the form of the Chinese characters, than Europeans are by the appearance of the groups formed by the letters of our alphabet.

But that is not what is meant by the enthusiasts of the Chinese system of writing. They ascribe every thing to the magical characters, (if I may so express myself,) and overlook the plainest and most obvious natural causes. Dr. Marshman, observing that there are numerous different dialects spoken in the empire of China, and yet that they all understand the pure style of writing which is called the Kwan-hwa, or Mandarin tongue, accounts for it in this manner. "One effect," says he, "resulting from the written language being thus unconnected with the colloquial, is however worthy of notice; it has conferred on the former a character of permanent perspicuity, which renders it equally intelligible to the inhabitants of the most distant provinces in that vast empire, and even to those of Cochinchina and Japan; while the latter has assumed a greater variety of forms than the colloquial dialects of ancient Greece and of India, with this exception, that these varieties of dialect
(like those in the various counties of England,) are confined to conversation, because incapable of acquiring that permanent character, which their connexion with the written medium has conferred on those of Greece and India."

Now see, my dear sir, how far enthusiasm has carried this learned sinologist. He represents the Chinese dialects, light words, as they are called, ("Επικα περιμέτρια,) as not written, and as used only in colloquial discourse. He very justly compares them to the provincial dialects of England, which he says are also unwritten; yet, though he cannot but see that the two cases are exactly similar, since the pure English is read in the provinces as well as in the capital, he must find a different cause for that of the Chinese, and that is what he calls the permanent perspicuity of its system of writing.

The venerable Doctor is not quite correct in supposing that the Chinese dialects, and those of England and other countries of Europe, are not written. If he means that they are not cultivated, and that they have not what is called a literature, I am disposed to agree with him; but that they are, or at least may be written, is a fact too notorious to be denied. I have seen a great number of popular books, in verse and in prose, written in the different patois of France. I have in my possession a collection of Noels (Christmas carols) in that of Poitou; and there is one, in another dialect, in the Congress library at Washington. I have not seen a book in an English dialect, but I have seen provincial words written in philological essays, and enough may be seen in Fielding's Tom Jones of the patois of Somersetshire. In fact, every language may be written with the letters of our alphabet. There are sounds, it is true, which they cannot represent; in that case new characters must be invented, or the old ones somewhat altered, as is done in the Polish

* Clavis Sinica, p. 558.
and other languages of Europe, and as is also done, by an analogous process, in the Indo-Chinese countries.

Thus the provincial dialects in China are written, by applying to their words and sometimes misapplying the characters of the national alphabet, or by altering them or inventing new ones when found necessary, of which the Doctor himself gives us several examples.* Why, then, does he represent those dialects as unwritten, as it were to increase our astonishment at the fact, that the Chinese characters are generally read and understood? Does he wish to make us believe that those characters speak to the mind of the reader vi propriā, by means of their permanent perspicuity? No; the learned author does not wish to deceive, but he deceives himself, and his language bears the stamp of the strong impressions which have taken hold of his prejudiced mind.

It is of little consequence whether provincial dialects are or not light or flying languages; but in this the Chinese, who give them that contemptuous name, and the sinologist who repeats it after them, are alike mistaken. It is a well known fact in Europe, that the patois, or peculiar dialects of provinces, preserve their words and their forms longer than cultivated languages. If we wish to have an idea of the language that was spoken in England several centuries ago, it is not to London, but to Yorkshire or Lancashire that we must go to find it; and the dialect of Provence remains the same at this day that it was in the time of the Troubadours, while the old French idiom is still preserved in the Walloon countries of the Netherlands. A cultivated language, on the contrary, continually varies according to the caprice of the writers, who think they are fixing it; but the works of the authors of a succeeding generation show them to have been mistaken. The language of Chaucer,

* Clavis Sinica, p. 360.
and a great deal of that of Shakspeare, can now only be found in some counties where the words are still retained.

The Mandarin dialect of China is not more permanent, as a spoken or written language, than those of the provinces. The only difference is that it is preserved in books, which the others are not. This may be called permanency in a certain sense; that is to say, so far that the memory of the recorded language is preserved even after it has ceased to be in popular use, but it cannot be understood in the sense of duration; for the Basque language, spoken by a few thousand men in a corner of Europe, has lasted longer than any of the cultivated idioms of that part of the world.

As to the Chinese writing, its immense number of superfluous signs, invented and added from time to time by the literati, show any thing but permanency, and may well be compared to the changes that we perceive from time to time in the orthography of our languages.

But what has the permanency, real or pretended, of the Mandarin dialect, or of its writing, to do with the reason of its being generally read or understood throughout the Chinese empire? Why should sinologists seek for the cause of that fact in the superiority of one system over another, when it may be accounted for in a much more simple and natural manner? The reason that this dialect is generally read and understood in China, while the others remain local, is, that it is the only one which is taught in the schools; precisely as in England the pure English, and not the northern or southern dialects, and in France the pure French, and not the patois of Languedoc or Provence, are taught, and consequently read and understood every where in those countries. It may be added, that the knowledge of the Mandarin dialect and of its graphic system, is the only means by which local as well as national offices can be obtained in the Chinese empire. Therefore, it is no argument in favour of the pretended ideographic character of the Chi-
nese writing, to say, that it is read and understood by all in China who have learned to read and write. I am almost ashamed to have to answer such arguments, and yet they are urged by men to whose opinions, on other subjects, I would submit with respect. Such is the force of prejudice, which even in enlightened minds is so difficult to be conquered.

We know very little of the dialects of the Chinese empire, as we are not permitted to penetrate into that country, or even to land on their coast, except at the port of Canton. Dr. Marshman has given us some interesting particulars respecting the dialect of that province,* from which we find that it differs very little from the court dialect. It is, like that, monosyllabic, and destitute of grammatical forms. The difference lies in some words, and in some peculiar modes of expression; but on the whole it is the Chinese, read and pronounced as Chinese with a few exceptions, which have necessarily occasioned some alterations in the character, which are the provincial orthography. The Mithridates gives us also a brief account of the dialect of the province of Fo-kien, extracted from a grammar and dictionary preserved in manuscript in the Royal Library of Berlin. The grammar, it appears, has been printed in Bayer's Museum Sinicum, which book I have not seen. On the whole, it differs from the pure Chinese, pretty much in the same manner as the Canton dialect;† and Dr. Marshman presumes that it is much the same in the other provinces.

But it is said that not only the inhabitants of the provinces of China, who speak different dialects, read, write and understand the Chinese written language, but that the same thing takes place in Tonquin, Cochinchina, the Loo-choo Islands, and other countries, where the languages are

* Clavis Sinica, p. 560.  
† Mithrid. vol. i. p. 54.
monosyllabic dialects of the Chinese, and also in Japan, the vernacular idiom of which country is known to be polysyllabic, and to differ entirely in etymology and grammar from that of China. If this were stated merely as a fact, without attaching to it any particular importance, it might easily be credited, as there is certainly nothing in it to excite our wonder. Thus, if a Chinese should say that he saw in Europe men of different nations conversing with one another in writing, in a language called the Latin, though they could not understand each other's native idiom, nor even converse together in that language, because of the difference of their pronunciation, he would easily be credited, and no more would be said about it; all the inference that would be drawn from the fact would be, that both had learned the Latin language, but could not converse in it, because they pronounced it differently. But it is not so that our enthusiasts wish to be understood. They wish it to be believed that there is something magical in the Chinese writing, something out of the ordinary course of things, by which ideas are conveyed from eye to eye, and through the eyes from mind to mind, without the intervention of articulate sounds; so that each person may read the characters in his own language, however it may differ from the Chinese in words or in form. To such a broad assertion it is impossible for a rational man to give his assent.

If the language of those who thus read the Chinese without being able to speak it, should be formed precisely on the model of that idiom as to its grammatical structure, and should use the same characters to represent corresponding words, the fact might easily be believed; but that is a thing not to be expected, since even in China the dialects differ from each other. If the resemblance should extend only to a certain number of words and of characters, to that extent the parties might understand each other, but no farther. If, however, the difference were total, as between the Japanese
and the Chinese, I cannot conceive how two men, thus circumstanced, can converse together in writing in the Chinese character, unless they both should have learned it, not as an ideographical character, but as the representation of a spoken idiom; in short, as Chinese. That they should not both pronounce it alike can make no difference; their vocal organs might not be accustomed to utter its sounds, or they might not have been in the habit of speaking it, and could not find the words when they wanted them.

This is a natural explanation of a natural fact; but miracles, such as the enthusiasts would have us believe, cannot be explained. We have disposed of the Chinese provinces; let us now see how the fact stands in other countries, and to what causes it is to be attributed.

We know that the monosyllabic family of languages extends beyond the limits of the Chinese empire. All those languages, as far as we are informed, appear to be derived from the same stock; but which of them is the mother tongue, it is impossible to tell. The Chinese is the most cultivated, but that does not give it the droit d'âinesse. Of all those languages we have but a few words, scattered here and there in the works of philologists. Of one of them only, a dictionary and a short grammar exists in Europe. It is the Anamitic, or, as some write it, Annamitic, the language of the country of Anam, which is said to include Tonquin and Cochinchina. The book is entitled Alexandri De Rhodes Dictionarium Annamiticum, and was printed at Rome, in 1651, in quarto.* Such rare books are not to be obtained in this country. It does not appear whether the written characters are given with the words; I rather presume that they are not.

It is known also, that those nations make use of the Chinese characters in writing their several idioms, but in what man-

* Mithrid. vol. i. p. 88.
ner, and with what alterations or modifications, is entirely unknown. I am informed that there are several Tonquinese manuscripts in the Royal Library at Paris, but that the characters are so altered or so abbreviated, which in part perhaps arises from their peculiar calligraphy, that the sinologists have hitherto been unable to decipher them. Of the Cochininese graphic character, nothing that I know of has yet appeared in Europe. Father Morrone's Vocabulary, now presented to our Society, will be the first printed specimen of the Chinese system of writing, applied to another monosyllabic language. It may help to decipher the manuscripts in the Royal Library at Paris. There is reason to believe that the Tonquinese and Cochininese, with little variation, are the same language.

It is therefore from this Vocabulary, and from it alone, that we can at present form an idea of the manner in which the Chinese system of writing is applied to a monosyllabic language other than the Chinese. I can do little more than produce the document, as it is not in my power to institute a comparison between the Chinese and Cochininese languages, and to explain the practical use which they respectively make of the same graphic system. The observations of M. de la Palun are not intended to instruct his brother sinologists, but to facilitate their labours. To them the question before us, as it respects monosyllabic idioms, must ultimately be submitted.

In this Vocabulary any one may observe that there are a number of genuine Chinese characters applied to words corresponding in sense, though often differing in sound. So far, it must be acknowledged that the two nations may communicate with each other in writing, though they might not orally. But it will be seen also, that this correspondence does not exist throughout, and that the same character in the two languages often represent what the sinologists would call ideas, totally different, and sometimes opposite to each
other. Neither is the combination of the characters always
the same in the two idioms. And lastly, it will be perceived,
that there is a great number of characters, which M. de la
Palun could not find in the printed Chinese dictionaries.
They may be abbreviations of Chinese characters peculiar
to the Cochinchinese, or perhaps they are among the multitude
of obsolete signs known only to the literati, and therefore
which can be of little service in common use. All these
things, no doubt, will be duly weighed by the sinologists of
Europe, if the subject should be thought worthy of their
attention.

But I will not anticipate on the labours of the sinologists,
who are much more able to investigate this subject than I
am, and to whom I am happy to have furnished a subject
on which to exercise their sagacity, aided by knowledge
which I do not possess.

On the whole it must be acknowledged, that, to a certain
extent, the Chinese and Cochinchinese may communicate in
writing without knowing each other's spoken language.
How far it is in their power so to do, I leave to those better
able to decide it than myself. I must now proceed to the
polysyllabic languages.

It is unfortunate, that of the polysyllabic languages which
are said to make use of the Chinese characters in their
writing, there is but one, the Japanese, with which we are
sufficiently acquainted to be able to form a judgment on the
question before us. We have a grammar of this language,
written in Portuguese by Father Rodriguez, and translated
into French by M. Landresse.* To this work is added a

d'une explication des syllabaires Japonais, et de deux planches, contenant
preface, and an explanation of the two syllabic alphabets of the Japanese, by which we are enabled to understand their graphic system; and the grammar lets us fully into the structure of their vernacular language, which is polysyllabic, and in its words as well as in its grammatical forms differs entirely from the Chinese. This language is called the Yomi; it is the idiom of the country, not a patois, solely in use among the vulgar and illiterate. In this language, says M. Remusat, are written novels, poems, and other works of light literature.*

The alphabet of this idiom consists of forty-seven characters, each of which represents a syllable. Those characters are Chinese, but which do not here represent words, or, as the sinologists would say, ideas, but only syllabic sounds. There are two such alphabets, one called Kata Kana and the other Firo Kana, but they are in fact one and the same; the only difference between them is, that one of them is formed of the running hand, and the other of the square characters of the Chinese. Both are written in an abridged form, and are joined together in various ways, which it is unnecessary here to mention. It is evident that those who know only this language, cannot communicate with the Chinese, either orally or in writing.

But the Chinese is also used in Japan. It is there a learned language, in which are written works of history, philosophy, and the higher literature.† The notes are usually written in the Yomi, as notes to Latin books with us are sometimes written in English. Sometimes the two languages are mixed, which it would seem can only be for those who are acquainted with both, that is to say, the literati. It is not presumable that the mass of the people possess this

---

knowledge. The pure Koye, says Father Rodriguez, is no other than the Chinese.*

The words, or, as sinologists would say, the pronunciation, of this language, are the same as the Chinese, with some trifling difference, arising principally from that in the vocal organs of the two nations, as several of the Chinese sounds are wanting in the Japanese. The people of Japan, for instance, want the letter 1, and substitute for it the letter r, and f for p, which they also want. They omit the nasal sounds, which they cannot articulate. M. Remusat gives us some examples of these differences.

It is probable, therefore, that those Japanese who have learned the Koye, that is to say, the Chinese language, though they pronounce it differently, as Europeans do the Latin and the Greek, may communicate in writing with the Chinese, though they may not understand each other when speaking; while those who have learned only the Yomi, cannot make themselves understood, either by writing or by word of mouth. In all this there is nothing wonderful or

miraculous, nor any thing that tends to prove the ideographic character, or, as Dr. Marshman calls it, the permanent perspicuity of the Chinese system of writing.

SECTION VIII.

Conclusion.

Such were my sentiments upon this subject in the month of December, 1827, when I had the pleasure to become acquainted with Captain Basil Hall, of the Royal British Navy. I had read his voyage to the Loo-Choo Islands, in which he had stated as matter of fact, that the inhabitants of China, Corea, Japan and Loo-Choo, understood each other by means of common written characters, though they could not understand each other's languages. I took the liberty, in the course of a conversation that I had with him, to express a different opinion, and to offer some arguments in support of my sentiment. Captain Hall candidly acknowledged that he had received his information at second hand, and that it was possible that he had been misinformed. There the matter rested until the latter end of June, in the year following, when Captain Hall being at New York, on the point of embarking for his native country, reminded me by letter of our conversation, and requested that I should send to him in England a statement of the facts and arguments on which was founded the opinion that I had advanced. This I promised to do, and he departed.

Shortly after his departure I performed my promise, and wrote him the letter which you have seen,* containing a summary of the arguments and facts by which I supported

* Appendix, A.
my opinion, and which I have explained here more at large. The season being fine, and I in want of exercise and relaxation from my professional labours, I took a trip to New York, and carried the letter with me, in order to put it on board one of the packets about to sail for England. While in that city I accidentally met with the latest number of Baron Ferussac's Bulletin des Sciences Historiques, &c.,* that had reached this country, in which, in a pretty long notice of a philosophical work, then lately published in Germany, I read the following paragraph:

"The author (M. Windischmann) is in an error, when he believes that the Chinese writing might become a pasigraphy, which all the world might make use of, even without knowing the oral language; for the characters which represent sound, the kling-ching, constitute almost three-fourths of the writing; and it is even this difficulty which has induced the Coreans, the Japanese, and the Cochinchinese, to change that system more or less, in order to adapt it to their languages. We find all the details relative to this alteration, which, at the same time, shows the passage from the ideographic to a system of syllabic and alphabetical writing, in the Memoir of M. Abel Remusat, inserted in the eighth volume of the Memoirs of the Institute, (Academy of Inscriptions and Belles Lettres, pp. 34—59.)"

I was as much surprised as delighted in reading this paragraph. I had always considered M. Remusat as the most formidable of my adversaries. I could not but remember that he had said, that the inhabitants of Japan, Tonquin, Cochinchina and the Loo-choo Islands, though they did not understand one another when speaking, could hold a con-

* It is much to be regretted that this excellent periodical has been discontinued, as well as the Revue Enyclopedique, which was conducted by M. Jullien, at Paris. Their loss, at least to my knowledge, has not yet been repaired.
conversation in writing, and read the same books.* But that was in 1811, when he was yet fresh from the reading of the Chinese authors, and his mind biassed by their opinions, which no one at that time could have contradicted without being stigmatised as a rash innovator and a fanciful theorist. But more extensive studies, and his own excellent judgment, had at last brought him to a clearer and a more rational view of the subject.

I was so delighted with this discovery, that I immediately informed Captain Hall of it in a postscript to my letter, which was not yet sealed up; it was done in such haste, that I called the article on M. Windischmann's book a short notice, and told him that it was written by Champollion, junior, which I really believed when I wrote, but which I have since found to be a mistake. The article is anonymous, and signed S.

Shortly after my return to this city, our Society received the eighth volume of the Memoirs of the Academy of Inscriptions, and I received M. Remusat's Memoir from the author himself. I cannot express with what pleasure I perused it. I found in it all my ideas, but much better expressed than I could have done. I recommend to you to read it with attention; you will find in it a full and clear refutation of the opinion which has too long prevailed of the almost universality of the Chinese characters.†

I should not have entered into this discussion, considering the question to be put at rest by M. Remusat's learned and

* De sorte que quoiqu'ils ne se comprenèrent pas en parlant, ils peuvent cependant converser par écrit, et lire les mêmes livres. C'est cette propriété de la langue Chinoise, qui a fait désirer à quelques missionnaires, qu'elle fût cultivée dans le monde entier, parce qu'alors, le Nouveau Testament étant traduit en Chinois, tous les peuples pourraient le lire sans apprendre la langue et sur la seule inspection des caractères. Essai sur la langue, &c. p. 35.
† See Appendix, B.
elegant Memoir, if, notwithstanding the strength and clearness of his arguments, the opinion which he supports, and which has been ascribed exclusively to me, had not been repeatedly contradicted in such a manner as to require on my part to be noticed. An anonymous writer in the Canton Register rebuked Captain Hall in a severe, and, I might say, illiberal manner, for having yielded his opinion to mine, and asserted that he had himself interchanged thoughts in the Chinese character with the Cochinchinese, Japanese, and Loo-chooans, without understanding their respective languages; and that it would be to be regretted, if that fact should lose its hold on the mind of any Christian philanthropist by the confessions of Captain Hall. You will find a copy of the whole article here subjoined.*

I cannot understand how religion comes to be called in aid of any man's opinion in a mere question of fact. I should think that it may be decided without appealing to Moses or the prophets. I never suspected before that the Chinese characters involved a religious dogma, which cannot be contradicted without danger to the Christian faith.

Not long afterwards, a more liberal antagonist presented himself in the person of Captain F. W. Beechey, of the Royal British Navy. That gentleman, in the narrative of his voyage to the Pacific and Behring's Straits, relates, that he found in the Loo-choo Islands many people who understood the meaning of the Chinese characters, but who could not give the Chinese pronunciation of the word; and he adds, that the language of Loo-choo is not monosyllabic like the Chinese, but is, like the Japanese, polysyllabic.†

I do not mean to contradict the gallant Captain in anything that he asserts from his own knowledge. He has seen Loo-chooans who could read the Chinese character, and yet could not converse with him in Chinese. Be it so; I

* Appendix, C.  
† Appendix, D.
hope I have shown above how this may have happened, without affecting the principles on which I found my doctrine. I am not so well convinced that the Loo-choo language is polysyllabic; in this I fear Captain Beechey will find himself mistaken.

The interesting question, therefore, how far the Chinese character may serve as a common medium of communication between nations who speak different languages, and cannot communicate orally with each other, may be considered as still sub judice; and documentary evidence tending to its solution, cannot be unworthy of the attention of a philosophical society. On one side are arguments which, to every unprejudiced mind, appear to be conclusive; on the other, are facts attested by witnesses worthy of credit. Surely the science of philology never presented a subject more deserving of full and complete investigation.

I can easily comprehend how Chinese books and writings may be read and understood by those who cannot speak the language. Such is the case, as I have observed before, with the sinologists and orientalists in Europe, who have never visited the countries the languages of which they have learned, would be greatly embarrassed were they to be suddenly transported into the city of Pekin or Cairo, to ask even for the common necessaries of life. It is the same with other languages, which are read and understood when written, by those who can neither speak nor understand them when spoken. There are many persons in this country and elsewhere, who can read French, Italian or German, without being able to converse in those idioms. The fact is, that the groups of alphabetical letters which form our written languages are quite as ideographic as the characters of the Chinese, and the proof is, that they can be read and understood by persons born deaf and dumb, and who never had the least idea of sounds. They understand the meaning of those groups by means of their analogies,
precisely as the Chinese characters are read. Those analogies in polysyllabic languages consist in the frequent occurrence of the same prefixes, affixes, and inflexions of words, in the Chinese, in the juxtaposition and combination of the signs of words explanatory of each other, but not in the mimic forms of the signs themselves, as representing natural or allegorical objects.

So far there is no difficulty. If we consider the Chinese as a predominant or a learned language, taught in the schools of Cochinchina and other countries as a necessary part of education, we may conceive how it can be read and understood by educated persons, and to a certain extent be written by them, though it cannot be spoken; but if we are to understand that each nation only learns to read the Chinese character as written at home, and as applied to her own language, the question becomes much more difficult, and it must be acknowledged that it requires further investigation.

I should not, however, have addressed either the Society or yourself upon this subject, but should have left it to take its chance, if I had not expected to throw some new light upon it by the communication of Father Morrone's Cochinchinese Vocabularies. I was informed of their existence by reading Lieutenant White's Voyage to the China Sea. I found in it a short extract from the Cochinchinese and French Vocabulary, containing twenty-five words of that language with the Chinese characters prefixed, and the corresponding Chinese word added by way of comparison, by a learned gentleman of Boston.* The greatest number of the Cochinchinese words, though different in sound, agreed in signification with the Chinese; but several were of quite another meaning. I found, for instance, that the character which in Chinese stood for kettle, in Cochinchinese signified

* The Rev. William Jenks, D. D.
lead; the Chinese character po, to land, in Cochininese meant silver, &c. I was so struck with this, that I mentioned it in the preface to my translation of Zeisberger's Delaware Grammar,* and expressed a hope that the Academy of Arts and Sciences at Boston would publish it in their valuable Memoirs. In this, however, I was disappointed. In the mean time, M. E. Jacquet, a distinguished member of the Asiatic Society of Paris, and a pupil of Abel Remusat, who had read the account I had given of that document in our transactions, expressed the wish to see it entire, and recommended that we should either publish it here, or transmit it to him to be published under the sanction of the Asiatic Society. The manuscript had been deposited by Lieutenant White in the library of the East India Marine Society at Salem, in Massachusetts. I made application to that Society for permission to take a copy of it. With the greatest liberality that respectable institution, through their president, William Fettymplace, Esq., sent me the original manuscript, and with it another, of the existence of which I had no knowledge, and which is the one in Cochininese and Latin, which, on account of its larger size and alphabetical arrangement, I have called a Dictionary. Of this last I immediately caused a copy to be made, which you have here enclosed.

On examining the former, I mean the Cochininese and French Vocabulary, with the Chinese characters prefixed, I found that it had not the addition of the Chinese words, as in the extract published by Lieutenant White. I was not then sufficiently acquainted with Dr. Jenks to take the liberty of asking him to undertake that labour. I was at a loss what to do, when I fortunately made the acquaintance of M. de la Palun, who was then consul of France at Richmond, in Virginia, and is now in the same capacity at Caracas, in

the republic of Venezuela. That gentleman, also a pupil of Abel Remusat, and well versed in the Chinese language, readily undertook to compare each Cochinchiinese word with the Chinese word represented by the same character, and to commit to writing the result of his inquiry. This work he completed before his departure, not without much haste, as he did not expect so soon to be removed. He gave it to me in his passage through this city, on his way to New York, where he embarked for the place of his destination. I regret that I had not sufficient time to confer with him on some points, which perhaps would have required a fuller explanation.

Lieutenant White, in his book, makes no mention of the authorship of those two documents, and only says that they were given to him by Father Joseph Morrone, at Saigon, and that he is the eldest of the Italian missionaries there. We are therefore left to conjecture who are the authors of those two Vocabularies.

As to the first, I mean the one which has the Cochinchiinese characters annexed to it, I believe it to have been compiled by the good father himself. It is written entirely in his own hand, and the translation of the Cochinchiinese words is in indifferent French. For instance, he writes la claire, I presume from the Latin clavis, instead of la clef, (the key,) and there are other indications which show him not to be very familiar with the language in which he wrote, though Lieutenant White says that he speaks it fluently. I therefore believe that I may publish this Vocabulary as the work of Father Morrone, as I see no reason to suppose that it is that of a French missionary. It is true, that the Cochinchiinese words are written with the Portuguese orthography, but that may be in common use among the missionaries there. In translating the Cochinchiinese word which means a goose, he uses the French word canard, but not being sure of it, he explains it by the Italian word oca,
which shows that he wrote in a language in which he was not perfect.

As to the second manuscript, (the Cochinchnese and Latin Dictionary,) I am of a different opinion, and believe it to be only a copy of the work of some other person. M. Jacquet, whom I consulted on the subject, wrote to me as follows: "As to the Vocabulary No. 2, I do not believe it to have been composed by Father Morrone. For more than two centuries, there has been in the missionary establishments in Cochinchina, a Cochinchnese and Latin Vocabulary, without the Chinese characters, which every new missionary copies on his arrival at the mission, and adds to it his own observations, if he is able to make any. In this manner there are several copies, differing in the details, though the ground work is the same. The celebrated Bishop of Adran, M. Pigneaux,* undertook, about fifty years

* Lieutenant White calls him Bishop Adran, mistaking the name of his episcopal see for his proper name. The account he gives of him is interesting. "At the period of the rebellion," (1774) says he, "there resided at court a French missionary of the name of Adran, who called himself the apostolic vicar of Cochinchina. The king held him in such great consideration, as to place under his tuition his only son and heir to the throne. After the rebellion was ended, the bishop became the oracle and guide of the king. Under his auspices the country was greatly improved; and during a short peace, he established a manufactory of salt-petre, opened roads, held out rewards for the propagation of the silkworm, caused large tracts of land to be cleared for the cultivation of the sugar-cane, established manufactories for the preparation of pitch, tar, rosin, &c.; opened mines of iron; constructed smelting furnaces and foundries for cannon. Adran translated into the Onam language a system of European military tactics, for the use of the army. Naval arsenals were established, and a large navy, principally consisting of gun-boats, galleys, &c., was built and equipped. Under his direction, reformation was effected in the system of jurisprudence; he abolished several species of punishments that were disproportionate to the crimes to which they were annexed. He established public schools, and compelled parents to send their children to them at the age of four years. He drew up commercial regulations; built bridges; caused buoys and sea marks to be laid
ago, to compile all those Vocabularies into one, which should be the *Dictionnaire de l'Académie* of Cochinchina. He was, during fourteen years, engaged in that work, and compiled at the same time a Latin and Cochinchinese Dictionary, and wrote a grammar of that language. His labours, yet unpublished, were lately presented to the Asiatic Society of Calcutta, with a request that the British government in India should be invited to publish them, at the expense of the East India Company, either at the printing office of Penang or at that of Calcutta. After a pretty long negotiation, the government made known to the Asiatic Society their refusal to undertake that publication, which would have cost only twelve hundred rupees. Application has since been made to the Translating Committee at London; the result is not yet known."

In the Journal of the Asiatic Society of London for January, 1836, p. 54, I read the following paragraph: "A letter from the Vicar Apostolic of Cochinchina was read, requesting the Society to forward the specimen of his Dictionary, which he regretted to hear could not be printed in Calcutta, to the Oriental translating fund in England, in case that body should be inclined to patronise its publication."

Nothing has been heard about it since that time; and it is feared that this application has been as unsuccessful as the former. The United States, therefore, will have the honour of being the first to publish authentic documents respecting the language of Cochinchina, and to introduce that curious idiom to the literary world.

down in all the dangerous parts of the coast, and surveys to be made of the principal bays and harbours. The officers of the navy were instructed in naval tactics by Frenchmen; his army was divided into regular regiments; military schools were established, and the officers taught the science of gunnery. Unfortunately for the country, the death of Adran occurred shortly after this; and with him expired many of the wholesome laws, institutions and regulations established by him." See White's Voyage to the China Seas, pp. 89, 93. Boston edition.
This publication will not fail to excite interest in the other hemisphere. There is none in Europe in any way relating to the Cochinchinese idiom, except the *Dictionary Anna-miticum* of Father De Rhodes, which I have already mentioned, and which is very rare. The Anamitic language of which it treats is that of Tonquin, but there is reason to believe that it does not differ much from that of Cochinchina. Lieutenant White calls the latter the language of *Onam*, by which the Tonquinese is also known; and he calls the Cochinchnese the Onamese flag. The Anamitic words given by Mr. Klaproth, in his *Asia Polyglotta*, are pure Cochinchinese.

It is said also, that about two hundred years ago the Tonquinese invaded Cochinchina, and drove away the former inhabitants from the country; and that, it is also said, is the origin of the present population.* In that case, the language must be very nearly if not entirely the same.

I have not pretended to enter into the comparison of the Cochinchinese languages and their system of writing, because I do not feel myself competent to it, and because the task will be much better performed by the sinologists of Asia and Europe, to whose judgment I shall cheerfully submit.

I am, very sincerely,

Your friend and humble servant,

PETER S. DU PONCEAU.

Philadelphia, 24th November, 1836.

*White, p. 82.  Morrison's View of China, p. 80.
APPENDIX

A.

Letter from Peter S. Du Ponceau to Captain Basil Hall, R. B. N.

PHILADELPHIA, 7th July, 1828.

My dear Sir,

Our mutual friend, Mr. Vaughan, has handed me your polite letter of the 29th ult. I was much surprised, and at the same time highly flattered, to find that the few observations I took the liberty to make to you on the writing of the Chinese, when we last met at Dr. Gibson's, had left an impression on your mind; as I had no expectation, amidst the many objects with which you were surrounded in your peregrinations through this country, of leaving even a trace in your remembrance. It is therefore with great pleasure that I comply with your request, in giving some further development to the ideas which I then threw out to you, and which derive all their value from your having thought them worthy to be kept in mind.

Having for many years devoted my leisure moments to the study of the philosophy of language, the Chinese idiom and its peculiar system of writing could not escape my attention. I was at first astonished at the wonders which are ascribed to this mode of ocular communication, which appeared to me to be greatly exaggerated, and I determined
to pursue the subject as far as my means would permit me. The result of my investigations does by no means agree with the opinion that is generally entertained. I do not pretend to know the Chinese language; therefore those who have learned, and consequently can read and understand it, have a great advantage over me in a discussion in which I attempt to controvert even the opinions of profound sinologists. I have, however, studied the elementary and other works which treat of that idiom, in order to acquaint myself with the curious structure of that language, and the principles of its graphic system; and have possessed myself of a sufficient number of facts to enable me to form logical conclusions. This is all that can be expected of a general philologist; if it were otherwise, that science must be entirely abandoned, as it is impossible for any one man to know more than very few of the unnumbered and perhaps innumerable languages that exist on the surface of the earth.

The general opinion which prevails, even among those who are the most proficient in the Chinese idiom, is, that the system or mode of writing which is in use in that country, and which they call the written in opposition to the spoken language, is an ocular method of communicating ideas, entirely independent of speech, and which, without the intervention of words, conveys ideas through the sense of vision directly to the mind. Hence it is called ideographic, in contradistinction from the phonographic or alphabetical system of writing. This is the idea which is entertained of it in China, and may justly be ascribed to the vanity of the Chinese literati. The Catholic at first, and afterwards the Protestant missionaries, have received it from them without much examination; and the love of wonder, natural to our species, has not a little contributed to propagate that opinion, which has at last taken such possession of the public mind, that it has become one of those axioms which no one will
venture to contradict. It requires not a little boldness to fly in the face of an opinion so generally received, and which has so many respectable authorities in its support, and none against it but those of reason and fair logical deductions from uncontroverted facts. As you have, however, in a manner challenged me to produce the proof of my assertions, I do not hesitate to do it, in the spirit of humility which becomes me, and submitting the whole to your candour and better judgment.

This opinion has naturally led to that of the Chinese writing being an universal written language conveying ideas directly to the mind, and which might be read alike in every idiom upon earth, as our numerical figures and algebraic signs are. This idea has been carried so far, that some missionaries have wished that the Chinese written language, as it is called, should be cultivated through the whole world; for then the New Testament, being translated into Chinese, all nations might read it, without learning the spoken idiom, and on a mere inspection of the characters.* And as a proof that this might be done, it has been alleged that the Japanese, Coreans, Cochinchinese, and other nations, could read Chinese books without knowing or understanding the oral language of China. But these are not the only wonderful systems to which this opinion has given rise.

This writing having been formed, as is supposed, without any reference to, or connexion with, spoken language, a question might naturally arise, which of the two was first invented? Nobody, to be sure, has ventured to say that writing existed before speech; yet if that proposition has not been directly advanced, I must say that sinologists have come very near to it. For instance, they affect to call the monosyllabic words of the Chinese language the pronounce-

* Remusat, Essai sur la langue et la literature Chinoise, p. 35.
tion of the characters, which leads to the direct inference that the words were made for the signs, and not these for the words. A justly celebrated French sinologist, M. Abel Remusat, does not indeed believe that a language was invented to suit the written characters after they were formed; but he supposes that some then existing popular idiom was adopted, to serve as a pronunciation to the graphic signs.* One step more, and hardly that, and written characters must have been invented before men learned to speak.

The English sinologists, Sir George Staunton, the Rev. M. Morrison, and others, represent the Chinese writing much in the same point of view, of which you may convince yourself by referring to their works. And by way of proof, it is everywhere repeated that the Chinese writings are read alike by different nations who do not understand the spoken idiom.

No philosopher that I know of has yet attempted to reduce these vague notions to a rational standard. I have stated them candidly, as they appear in the works of the missionaries, travellers, and sinologists, and I must own that they never satisfied my understanding. I have taken great pains to come at the real truth, and I shall now proceed to communicate to you the result of my inquiries.

The Chinese language, I mean as it is spoken, for I do not call any writing a language, except metaphorically, is, as you well know, monosyllabic; that is to say, every one of its syllables (with very few exceptions) is a word, and has a specific determinate meaning; in which it differs from our languages, which consist for the most part of unmeaning syllables, or of syllables which, if they have an appropriate meaning, have no connexion with the words of which they make a part. Take, for instance, the word con-fir-ma-

tion; the first and the two last syllables have no meaning whatever; the second, fir, by itself means a kind of tree, but it has no relation to the word in which it enters. It is otherwise with the Chinese language; every syllable of it is significant, and is never employed but in the sense of its meaning. There may be compound words in the Chinese, but as in our words welfare, welcome, each of their component syllables preserve their proper signification.

Every one of these significant syllables or words has one or more characters appropriate to it, and every character has a corresponding word.* If two Chinese read the same book, they will read it exactly alike; there will not be the difference of a single syllable. Were it otherwise, the Chinese writing would be translated, not read. Notwithstanding what the sinologists tell us of the beauty of the Chinese poetry, and even of their prosaic style, to the eye, it is certain that the metre and rhythm of their verses are addressed to the ear. Their versification is measured, and their poetry is in rhyme, and they have also a measured prose.† All this is written in the pretended ideographic character, word for word, exactly as it is spoken; and no two readings can absolutely take place. It seems therefore evident, that the characters were invented to represent the Chinese words, and not the ideas which these represent, abstractedly from the verbal expression.

It is true, that in the grouping of characters to represent single words, the inventors have called to their aid the ideas which the words express. Thus the character which answers to the word hand, is grouped with those which answer to words expressing manual operations. But this was not done with a view to an ideographic language; it was merely an auxiliary means to aid in the classification of the numerous signs which otherwise the memory could not

* Remusat, Grammaire Chinoise, p. 1.  † Ibid. p. 171, &c.
have retained. The sinologists see great beauties in these associations, of which I am not competent to speak. I suspect, however, that there is in that more imagination than reality.

Be this as it may, as the Chinese characters represent the words of the language, and are intended to awaken the remembrance of them in the mind, they are not therefore independent of sounds, for *words are sounds*. It makes no difference whether those sounds are simple and elementary, as those which our letters represent, or whether they are compounded from two or three of those elements into a syllable. There are syllabic alphabets, like that of the Sanscrit and other languages, and it has never been contended that they do not represent *sounds*. And it makes no difference that the Chinese syllables are also *words*, for that does not make them lose their character of sounds. But, on account of this difference, I would not call the Chinese characters a *syllabic*, but a *logographic* system of writing.

This being the case, it seems necessarily to follow, that as the Chinese characters are in direct connexion with the Chinese spoken words, they can only be read and understood by those who are familiar with the oral language. I do not mean to say that they cannot be applied to other monosyllabic idioms, (and they are, in fact, applied even to polysyllabic languages, as I shall presently show,) I only contend that their meaning cannot be understood alike in the different languages in which they are used.

You very well know, my dear sir, how various are the forms of human languages. You know that, even in the same language, there are not two words exactly synonymous; *a fortiori*, it must be so in two different idioms. Take the word *grand*, for instance, which belongs to the French and to the English languages. Though its general meaning be the same in both idioms, yet how strong are the shades which distinguish the ideas they particularly repre-
sent! Now let us suppose that England is in possession of a logographic system of writing. Will the character representing the word grand be clearly understood by a Frenchman who does not know the English oral language? Will an Englishman understand the French character j’aimerais, without knowing the French mode of conjugating verbs? How would a Latin phrase be understood by an Englishman or a Frenchman, merely by means of signs appropriate to each word? Our ideas, independent of speech, are vague, fleeting, and confused; language alone fixes them, and not in the same manner with every nation. Some languages take in a group of ideas, and express them in one word; others analyse a single idea, and have a separate word for each minute part of which it is composed. Some take an idea as it were in front, others in profile, and others in the rear; and hence the immense variety of forms and modes of expression that exist in the different languages of the earth. All languages abound in metaphors and elliptical modes of speech, which vary according to the genius of each particular idiom. In no language are these figures more frequent than in the Chinese, which is admitted to be elliptical in the highest degree, and is full of far-fetched metaphorical expressions. For instance, the grandees of the empire are called the four seas, (quatuor maria,) to express which the Chinese writing has two characters, one for quatuor and the other for maria, which is very distinct from the idea of superiority or greatness. I ask how these characters can be understood or read in a language that has not adopted the same mode of expression? Again: the English phrase, “I do not expect it,” is rendered in Chinese by “how dare!” and the sentence, “What you are alarmed about is not of much importance,” is thus expressed; “You this one bother not greatly required.”* It would be difficult

* Morrison’s Chinese Dialogues, vii. 197.
to read this intelligibly in any language but the Chinese, or one formed exactly on the same model, and in every respect analogous to it. Nor could the corresponding literal English phrases be read intelligibly in Chinese, for want of similar turns of expression and grammatical forms.

A purely ideographical language, therefore, unconnected with spoken words, cannot, in my opinion, possibly exist. There is no universal standard for the fixation of ideas; we cannot abstract our ideas from the channel in which language has taught them to run; hence the Chinese writing is and can be nothing else than a servile representation of the spoken language, as far as visible signs can be made to represent audible sounds. I defy all the philosophers of Europe to frame a written language (as they are pleased to call it) that will not bear a direct and close analogy to some one of the oral languages which they have previously learned. It will be English, Latin, French, Greek, or whatever else they may choose; but it will not be an original written idiom, in which ideas will be combined in a different manner from those to which they have been accustomed.

This reasoning, you will say, may be perfectly correct; but what if, in spite of your theory, Chinese books are understood in Japan, Corea, and Cochinchina, even though the people do not understand the spoken idiom of China? This is, indeed, a pressing argument; but was the child born with a golden tooth?

It is a pretty well ascertained fact, that in Tonquin, Laos, Cochinchina, Camboje and Siam, and also Corea, Japan, and the Loo-choo Islands, the Chinese is a learned and sacred language, in which religious and scientific books are written; while the more popular language of the country is employed for writings of a lighter kind. It is not therefore extraordinary, that there should be many persons in those countries who read and understand Chinese writing, as there are many among us who read and understand Latin:
and many on the continent of Europe, and also in Great Britain and the United States, who read and understand French, although it is not the language of the country. In many parts of the world there is a dead or living language, which, from various causes, acquires an ascendancy among the neighbouring nations, and serves as a means of communication between people who speak different idioms or dialects. Such is the Arabic through a great part of Africa; the Persian in the East Indies; the Chinese in the peninsula beyond the Ganges; and the Algonkin or Chippeway among our north-western Indians. This alone is sufficient to explain why Chinese books and writings should be understood by a great number of persons in those countries, and why they should smile at an unlettered foreigner who cannot do the like. But it must not be believed that they read those writings as a series of abstract symbols, without connecting them with some spoken language. If their language be a dialect of the Chinese, varying only in the pronunciation of some words; and if it be entirely formed on the same model, there is no doubt but that the two idioms may be read with the same characters, as their meaning is the same in both; but if there is any material diversity between the two idioms, it is impossible that the Chinese character should be understood, unless the spoken language of China be understood at the same time; and this may be proved by well ascertained facts.

In Cochinchina, the language commonly spoken is a dialect of the Chinese, monosyllabic like the mother tongue, and formed on the same grammatical principles. In writing this language, the Chinese logographic character is exclusively used; but it does by no means follow, that a Cochinchinese book would be understood in China, or vice versa. For although, in both languages, each character represents a single word, yet the words so represented are not always
the same in sound or in sense. Thus the character which in Chinese represents the word tān, (a plain,) in Cochinchi-
inese signifies dāt, (the earth.) The character kīn, (metal,) in Cochininese is read kīm, (a needle); Chinese yī, (kettle,) Cochininese chī, (lead); Chinese pō, (to land,) Cochininese bāc, (silver.)* It is evident that the same book or manuscript could not be read or understood alike by a Chi-
inese and a Cochininese.

I cannot omit here an observation which appears to me to be peculiarly striking. If the Chinese writing be really ideographic; if it represents ideas and not sounds, how does it happen that the same character is used in different lan-
guages to signify things that have no kind of connexion with each other; as for instance, the verb to land, and the sub-
stantive silver? It is difficult to think even of a distant metaphor that will apply to both these subjects.

In Japan, there are two languages in general use. The Koye, which is no other than the Chinese, with some vari-
tion in the pronunciation of the words, arising probably from the difference of the vocal organs of the two nations; and the Yomi, which is the most popular language, the former being devoted to religion and science. The Yomi is polysyllabic, and has declensions, conjugations, and other complex grammatical forms, which the Chinese has not. Therefore, it cannot be written with the Chinese character logographically, any more than the Greek or Latin could; yet the Chinese character is used in writing that idiom. From a selection of those characters a syllabic alphabet has been made, which is in common use.† From a similar se-
lection, says M. Remusat, the Coreans have made a mono-
phonic alphabet of nine vowels and fifteen consonants;‡

† Grammaire Japonaise de Rodriguez.
‡ Recherches sur les langues Tartares, p. 81.
with which they write their language. At the same time they can read and understand the Chinese, in which their sacred and scientific books are written.

We know very little of the language of the Loo-choo Islands. Father Gaubil (the French missionary) says, that they have three different idioms; others say that they speak a language compounded of the Chinese and Japanese. But little reliance is to be placed in these reports. It is probable that the Chinese is read and understood there also as a religious and scientific language, or perhaps as an auxiliary means of communication.

I have said enough, I think, to show, that if the Chinese writing is read and understood in various countries in the vicinity of China, it is not in consequence of its supposed ideographic character; but either because the Chinese is also the language or one of the languages of the country, or because it is learned, and the meaning of the characters is acquired, through the words which they represent. Without a knowledge of these words and of their precise signification, according to the genius, syntax, and grammar of the language, it would be impossible to understand or remember the signification of the characters. If those characters could be read into languages which, like the Yomi and the Corean, differ in their forms from the Chinese, or in the meaning and sound of the words which the signs represent, they might be read alike in English, French, Latin, Greek, Iroquois, and in short in every existing idiom upon earth, which I think I have sufficiently proved to be impossible, according to the plainest deductions of simple logic.

I have been carried further by my subject than I intended; but as I do not believe that it has yet been presented in this point of view, I thought that I should not be sparing of a few words in order to make myself clearly understood. With what success I have made out my argument, I leave
you entirely to judge. At any rate, I rejoice in the opportunity which it gives me of expressing to you the sentiments of sincere respect and esteem with which I am, dear Sir,

Your most obedient, humble servant,

PETER S. DU PONCEAU.

New York, 14th July.

P. S.—Since my arrival in this town, whither I have come on an excursion of pleasure, I have been agreeably surprised to find, by an article in the Baron Férusac's Bulletin des Sciences Historiques, Philosophiques, &c. for the month of March last, that the opinion I have expressed on the subject of the Chinese writing, begins to prevail among the learned of Europe. The article I allude to is a short notice (p. 258) by M. Champollion, the elder, of a work on the History of Philosophy, published last year at Bonn, by M. Windischman, a German writer, who, as usual, represents the Chinese character as a sort of pasigraphy, which may be read alike in every language. M. Champollion very properly combats this opinion, and observes, (as I have done,) that the Japanese, Cochinchinese, and other nations, have been obliged to modify that system of writing, to adapt it to their own languages. He adds, that the details of those alterations are to be found in a late memoir of M. Remusat, inserted in the eighth volume of the Memoirs of the Institute of France, (Academy of Inscriptions and Belles Lettres,) pp. 34—69. Thus I have the good fortune to have M. Champollion and M. Remusat on my side, to some extent at least, though to what extent I cannot exactly tell, as the volume of the Memoirs of the Institute above referred to has not yet reached this country, at least that I know
of. I am very anxious to see it, as I have no doubt that the subject will have been treated in a very profound and scientific manner, by so able and learned a writer as M. Remusat. I beg leave to refer you to it, for further information on this interesting topic. P. S. D.

B.

Translated extract from M. Abel Remusat's Memoir, entitled *Remarques sur quelques écritures syllabiques, tirées des caractères Chinois, &c.* See the Memoirs of the Academy of Inscriptions and Belles Lettres, vol. viii. New Series, p. 34 et seq.

The first missionaries who spoke of the Chinese language have said,—and it has been repeated after them in all relations or narratives, and in all treatises of geography, general or particular,—that the Chinese characters, indifferent to all pronunciation, were understood by all the nations neighbouring upon China, notwithstanding the difference of their idioms; so that the Tonquinese, the Cochinchinese, the Coreans, the Japanese, read and pronounced them in their own way; and that all those nations who cannot communicate orally either with the Chinese or with each other, could nevertheless correspond by writing, and read the same books, because they attached the same signification to the characters. This idea naturally brought us to that of *pasigraphy*, or universal writing, and it was strengthened by the example of the Arabic figures, which, as I have already said, are to a certain degree analogous.—But, without losing ourselves in vain speculations, the fact itself, such
as it has been advanced, would be to us a considerable subject of astonishment. Indeed, it would be necessary that the idioms of the nations in the vicinity of China should bear a great analogy to that of the Chinese, to have made the former adopt, without any alteration, the characters of the latter, so as to be able to read, in their own language, books written in a different idiom; the structure of both languages, the syntax, the order in which the words are placed, the inversions, the metaphors, should be exactly the same; the particles and signs of relation should always be employed on the same occasion, and put in the same place; all these analogies would suppose a complete similarity in the genius of all those languages, and that would be a phenomenon which the difference between the words would render still more difficult to explain. It will not therefore excite surprise, to find, on examination, that things are not exactly as has been supposed, which it will be easy to demonstrate.

The books of Confucius, and the other classical works, which are required to be understood by all who occupy places in the countries submitted to the institutions of China; the imperial calendar, received by all the tributary nations, are the only books generally read and understood out of China, by all who pretend to the title of a man of letters (un lettré): but it is false that they read those books in their own language. The pronunciation which they apply to each word is taken from that of the Chinese themselves, and does not differ more from it than that of certain provinces of the empire differs from that of the Mandarin language. When read by the literati of Cochinchina or Japan, the Chinese of those books is altered and corrupted, but it is still Chinese. The phraseology does not want to be changed; the grammar remains the same: but then that is a learned language, which is specially studied, and is not understood by the mass of the inhabitants, except a small number of words, which are common to them and the Chinese; some techni-
cal terms, some names of natural objects or articles of merchandise, and some consecrated formulas or proverbs, which have passed into universal usage.

On the other hand, in Tonquin, Japan or Corea, some persons may write, in imitation of those books, Chinese sentences or characters, which will be read and understood in China, if they are regularly composed; and it is what is often done by the learned of those countries, particularly in Japan. But, in that case, they make use of characters which are foreign to them, and of a language and grammatical system which are not those of their maternal idiom.

[The learned author expatiates much further upon this subject, and illustrates it by a variety of examples, drawn from the Anamitic and other languages. We can only refer our readers to that excellent Memoir, which is well worthy of their attention.]

C.

_extracted from the Canton Register, No. 6. Wednesday, 17th March, 1830._

_Captain Basil Hall's Travels in North America._—In the second volume of this work, at the 369th page, there are some remarks concerning the Chinese language, being the result of a conversation which the Captain had with Mr. Du Ponceau, of Philadelphia, "one of the most learned philologists alive." Hall says, that he himself had published the opinion "that in China, Japan, Corea and Loo-choo, though the spoken languages were different, the written
character was common to them all; and consequently, that when any two natives of the different countries met, though neither could speak a word of the other's language, they would readily interchange their thoughts by means of written symbols." "Before Mr. Du Ponceau had proceeded far in his argument," (says the Captain,) "he made it quite clear that I had known little or nothing of the matter; and when at length he asked why such statements had been put forth, there was no answer to be made but that of Dr. Johnson to the lady who discovered a wrong definition in his Dictionary—Sheer ignorance, Madam." "Seriously, however," (continues Hall,) "it is to be regretted that an error of this magnitude in the history of language should still have currency; and I have done, by way of reparation, what obviously presented itself at the time;" which was, that Mr. Du Ponceau should give the Captain his arguments in writing, that he might print them, which Du Ponceau did. Unfortunately, however, the Captain has not published his friend's reasoning, but only his conclusions. Those who desire to see the reasoning, are referred to the Annals of Philosophy, for January, 1829.

In a former number we noticed the boldness of Captain Hall's assertions in reference to Loo-choo in the presence of Bonaparte, which assertions Sir Walter Scott repeated in his Life of Napoleon. Our author was not more bold then, than he appears timid on the present occasion; for whatever the arguments or theory of his "good humoured" friend may be, there is not, we are convinced, any material error in Captain Hall's first assertion. That in every one of those countries, China, Japan, Corea and Loo-choo—not, as Du Ponceau says, in Camboje and Siam—but in the above named nations, the Chinese written language is very generally understood by all who can be said to read and write; and not in the limited manner that a "learned and sacred language may be supposed to be understood." And
it is equally certain, that "when any two natives who can write the Chinese character meet, though neither could speak a word of the other's language, they can readily interchange their thoughts by means of the Chinese written symbols." The writer of this has interchanged thoughts with Cochinchenese, Japanese, and Loo-chooans, by means of the Chinese characters, although he could not understand one word they uttered, nor could they understand his speech. Therefore, for all practical purposes, whether of religion, science or commerce, it is difficult to see wherein Captain Hall's first assertion is erroneous.

But Mr. Duponceau, the President of the American Philosophical Society, says: "It must not be believed that they (the several nations alluded to) read those writings as a series of abstract symbols, without connecting them with some spoken language." Again: "If there is any material diversity between the two (or the many) idioms, it is impossible that the Chinese character should be understood at the same time." Page 372.

As Captain Hall's book does not contain the theory nor argument of the President Du Ponceau, it is difficult to say what he is combating. But that the inhabitants of China, Cochinchina, Corea, Japan and Loo-choo, can, when totally unintelligible to each other orally, communicate their thoughts by means of the Chinese character—that is, the Chinese character is understood at the same time—is perfectly true. That the Chinese character is thus generally understood by five nations, whose spoken languages are unintelligible to each other, is an important fact; and "seriously would it be to be regretted" that this fact should lose its hold on the mind of any Christian philanthropist, by the confessions of Captain Hall before the President of the American Philosophical Society.
Extract from the book entitled "A Narrative of a Voyage to the Pacific Ocean and Behring's Strait, to co-operate with the Polar Expeditions performed in his Majesty's ship Blossom, under the command of Captain F. W. Beechey, Royal Navy, F. R. S., &c. &c., in the years 1825, 26, 27, 28." Published by authority of the Lords Commissioners of the Admiralty. London, printed: Philadelphia, reprinted: 1832.

While upon this subject I must observe, that the idea of Mr. P. S. Du Ponceau, "that the meaning of the Chinese characters cannot be understood alike in the different languages in which they are used," is not strictly correct, as we found many Loo-choo people who understood the meaning of the character, which was the same with them as the Chinese, but who could not give us the Chinese pronunciation of the word. And this is an answer to another observation which precedes that above mentioned, viz. that "as the Chinese characters are in direct connexion with the Chinese spoken words, they can only be read and understood by those who are familiar with the spoken language." The Loo-choo words for the same things are different from those of the Chinese, the one being often a monosyllable, and the other a polysyllable; as in the instance of charcoal, the Chinese word for it being tan, and the Loo-chooan chahee-jing, and yet the people use precisely the same character as the Chinese to express this word; and so far from its being necessary to be familiar with the language to understand the characters, many did not know the Chinese words for them. Their language throughout is very different
from that of the Chinese, and much more nearly allied to the Japanese. The observation of M. Klaproth, in *Archiv für Asiatische Litteratur*, p. 152, that the Loo-choo language is a dialect of the Japanese, with a good deal of Chinese introduced into it, appears to be perfectly correct, from the information of some gentlemen who have compared the two, and are familiar with both languages. The Vocabulary of Lieutenant Clifford, which we found very correct, will at any time afford the means of making this comparison.
No. II.

VOCABULARY

OF THE

COCHINCHINESE LANGUAGE.

BY THE REV. JOSEPH MORRONE,

MISSIONARY AT SAIGON.

WITH NOTES,

SHOWING THE AFFINITY OF THE CHINESE AND COCHINCHINESE LANGUAGES, AND THE MANNER IN WHICH THOSE TWO NATIONS MAKE USE OF THE SAME SYSTEM OF WRITING.

BY M. DE LA PALUN,

Late Consul of France at Richmond, in the State of Virginia; now holding the same office at Caraccas, in the Republic of Venezuela.
PREFACE,

BY PETER S. DU PONCEAU.

The pious and learned Warburton was the first who discovered that the inscriptions on the Egyptian obelisks were not a secret and mysterious writing, but that they were intended to be read and understood by all. He was the first who discovered (before Young or Champollion was born) that the characters called hieroglyphic were employed by the Egyptians as the signs of elementary sounds, or in other words, as letters of an alphabet.* He made these discoveries by the force of his intuitive genius, and by a clear and correct understanding of the famous passage of Clement of Alexandria, which philologists in Europe have since taken so much pains to torture and render unintelligible. He made all these discoveries, but has not received for them the credit to which he is entitled. Young and Champollion only proved by facts that his theory was correct. His superiority over them is that of the mind, which soars above the clouded atmosphere of human intelligence, and penetrates into the unknown, over the patient labour, aided by sagacity, that investigates details. To Warburton, therefore, is due the honour of having first of all the moderns, discovered and understood the true system of the ancient

Egyptian writing, and manifested it to the world by a clear and luminous course of reasoning, founded on the nature of things, and to which every reasonable man is forced to give his assent.

These were great and important discoveries for the time when they were made; but unfortunately the learned prelate stopped there, and did not proceed further. The Egyptian writing was connected with the subject he was treating of; the Chinese was not, and much less the paintings of the Mexicans. With respect to those, he adopted the generally received opinions. Therefore, he considered the art of writing as confined to two systems, the one representing or recalling to the mind ideas, (as he conceived the Chinese characters to be, and the Egyptian symbols to have been in their origin,) the other representing sounds. But by the word sounds, he understood only the primary and secondary elements of speech, which we call letters and syllables; it does not appear to have occurred to him that words also were sounds, and might be represented as such by graphic signs.

The President Debrosses, who, in his Traité de la formation mécanique des langues, adopted all the Bishop's opinions on this subject, and whose chapter on the different systems or modes of writing is but a paraphrase of what is said in the Divine Legation, entitles that chapter “De l'écriture symbolique et littérale,” (Of symbolic and literal writing,) thus taking it for granted that no other system than these two did or could exist. This Vocabulary I hope will show, that there is also a lexigraphic system, by which words, that are also elements of speech, are recalled to the mind by means of written signs or characters, and which is therefore a phonetic system as much as our alphabets; and that the only difference between it and those which represent the more minute elements of human language, is in the method pursued, arising from the great number of words of
which languages are composed, which could not be conveniently represented by characters purely arbitrary.

If this theory be founded on rational principles, there will arise out of it a system of classification of the different modes of writing, which appears to me to be consistent with itself and with the nature of things. Written languages, then, (I am willing to use the expression,) will be divided into three classes, to wit:

1. The *lexigraphic*, which represents *words*.
2. The *syllabic*, which represents *syllables*.
3. The *elementary*, which represents the primary sounds or elements of speech, which we call *letters*.

In the first of these classes I would place the writing of the ancient Egyptian, as well as that of the Chinese, and its affiliated languages.

I do not mean to say that one of these forms is exclusively adopted in any one language. They may be found mixed, as has been shown to be the case in the Egyptian and the Chinese. There is nothing in this world which is not composed of various elements, but there is generally one which predominates.

As to *ideographic* writing, as it is called, I am willing to admit that it may exist as abridged forms, and as auxiliary to other systems. Thus we have our arithmetical and algebraical figures, and in our almanacs we see the planets, the phases of the moon, and the signs of the zodiac, represented by peculiar characters. But I cannot believe that there can be an entire language so composed, as I have endeavoured to prove in my letter to Mr. Vaughan.

As to the Mexican paintings, we know too little about them to make them the basis of a system. We must wait until more light shall be thrown upon the subject. Until then, conjectures can lead to no result. I believe them to have been connected with the spoken language, but I confess that I cannot administer the proof of it.
I find by Dr. Young's Rudiments of the Egyptian Language, annexed to Mr. Tatam's Coptic Grammar, which has but lately come to my hands, that great progress has been made in deciphering the demotic manuscripts, a fact of which before I had no knowledge. The discoveries that have been made go far to confirm my theory. I hope this study will be pursued.

I have not yet seen the work on Egyptian hieroglyphics, ascribed to M. Spineto; but from references made to it I observe that the learned in Europe are now looking more for words than for ideas in the hieroglyphic characters. Thus my theory is at least adopted in practice. I see also that this author has found characters representing those particles that take the place of our inflected grammatical forms, which corroborates M. Champollion's opinion, contradicted with so much levity by M. Klaproth,* and shows the Egyptian writing to have been in part syllabic. I have seen also, from those few quotations, that the Egyptians had characters to represent words of more than one syllable, as soten, king, and noyte, God; from which it appears, that the lexigraphic system is not confined to monosyllabic languages, like the Chinese, as might perhaps have been supposed. Upon the whole, I would conclude that the Egyptian system was mixed, and partook of the lexigraphic, syllabic, and elementary character, with symbolic abbreviations, (the remains of a former imperfect system,) such as we ourselves use in our almanacs, &c. These, probably, were chiefly employed on religious subjects.

It is much to be regretted that literary intercourse is not more frequent and more regular between this country and Europe. Many valuable books do not come to us until long after they have appeared abroad. Thus American writers

* See above, p. 57.
may be taxed with pretending to have discovered what had been discovered before. Our celebrated Rittenhouse for a long time believed that he was the inventor of fluxions. He did not know that Newton and Leibnitz had been contending for the merit of the discovery. That was in early colonial times, but we may be said to be yet in a great measure colonial in that respect. I hope the learned of both hemispheres will unite their efforts to produce a state of things more favourable to science.

These remarks will perhaps be considered as out of place, and as foreign to the Vocabulary which this preface is meant to introduce. I am willing to confess that they are. A twelvemonth has elapsed since my letter to Mr. Vaughan was written, and further reflection has convinced me that the system which I have presented in it might have been much more fully developed, and that it is fruitful of consequences that may perhaps extend the bounds of philosophical science. It appears to me that the art of writing, in its different forms, deserves to be separately investigated; it not being less important to consider how men have proceeded in inventing different modes of communicating their ideas by writing, as in forming their oral languages. This branch of science might be called graphology, or by any other name that should be thought more appropriate.

It is but lately that the idea occurred to me of dividing the different systems of writing into classes, as I have attempted to do in this preface. This classification is a natural consequence of my general theory, and I have thought I might, without too much impropriety, introduce it here, with a few more observations that occurred to me as I wrote. I have however to say, by way of apology, that the question which this Vocabulary is intended to aid in solving is intimately connected with the system that I have exposed,
and that its solution appears to me in a great measure to depend upon it.

That question, restricted within its proper bounds, is no other than "Whether, and how far, the Chinese characters can serve as an ocular medium of communication between two nations who do not understand each other's spoken language, and who have not learned to read that character as Chinese, and as connected with the Chinese oral idiom?"

Two nations are here presented (the Cochinchinese and the Chinese) who appear to have originally made part of the same people, who both speak monosyllabic languages, formed on the same grammatical system, and appearing to be dialects of each other, or of some other language formerly common to them both. Those nations have, with some modification, the same religious principles, the same form of government, the same habits, manners and customs, and that common stock of ideas, which constitutes a family of nations, and greatly facilitates their communications with each other. If it should be found and decided that two nations, thus circumstanced, cannot communicate together in writing by means of a common graphic system, it will be clear that no others can do the same; if otherwise, it will prove nothing as to nations whose oral languages differ essentially in their structure, and to which the same system of writing cannot be applied; as, for instance, the Japanese and the Chinese, on whom I have sufficiently expatiated.

This Vocabulary will not only aid in the solution of that important philological question, but I think it will throw some light on the early history of the Chinese and Cochin-chinese people in relation to each other. Languages are acknowledged to be a source of history. The same, I believe, may be said of the graphic characters of the Chinese and Cochinchinese. Let me be permitted to give here an example of it.
In the Chinese language the sun is called *ji*, and the moon *youei* (I use M. Remusat's orthography); each of these words has a character to represent it, which was originally meant as a picture of the object. A month, which in that language is called *a moon*, has the same name as the planet, and is represented in writing by the same character. Now let us see how it is in Cochinchinese.

In that language the sun is called the *face in the heavens*, or, in their abridged form of speech, *face heavens*. The moon is called *white face* or *moon face*; for the word *trang*, which signifies *white*, used singly, means also *moon*. The words *sun* and *moon*, or rather *face heavens*, and *face white* or *face moon*, are each represented by two groups of characters, placed one under the other, according to the Chinese custom. (See plates Nos. 7 and 8.) So that the Cochinchinese have not, like the Chinese, a single word to express the *sun* or the *moon*, nor have they a single character or group to represent either. Those two great luminaries, however, strike the senses at first sight; and almost every nation has a separate name, consisting of a single word, for each of them, without having recourse to a periphrasis for either.†

From these facts I am inclined to infer, that the Chinese and Cochinchinese had been long separated, before the latter received the art of writing from the former, and that their spoken idioms had at that time considerably diverged; so that it may be fairly presumed that the Chinese were a civilized nation long before the people of Cochinchina.

Many more such facts, no doubt, will strike the minds of those who are better acquainted than I am with the Chinese

*Thang* is the word for *month*; the character is the same as for *white*. (See plates, Nos. 8 and 26.)

† Some of our Indians call the moon the sun or the star of the night, (l'astre de la nuit,) but such instances are rare.
language and character, and to them I commit the subject with great pleasure. On these various grounds I hope that this Vocabulary, and the Dictionary which follows it, will not be thought devoid of interest by the learned world.

The Vocabulary was written by Father Morrone, in the French language; I have only added to it the English signification of the words, that it might be more generally understood. M. de la Palun's Notes, and his Preliminary Observations, were also written in French; I have, with his permission, translated them into English, and added a few occasional remarks, particularly references to the Cochin-chinese and Latin Dictionary,* (which M. de la Palun had not before him when he wrote his annotations,) and some other references. Those additions are enclosed between brackets []; all else is a faithful translation of M. de la Palun's text. The asterisks, (*) which indicate that the Cochin-chinese characters could not be found in his Chinese dictionaries, are exactly in the places which he assigned to them.

The Dictionary, or Lexicon, as it is entitled, was written in Cochin-chinese and Latin, as it now appears; nothing has been changed or altered in it. It is published (except the title) exactly as it was received. The alphabetical order does not appear to have been very carefully preserved; but it has been thought best not to make any alteration in it. The accents, and the signs indicating the tones, have been omitted, both in the Vocabulary and the Dictionary, as useless to the object of this publication, which is not to teach the pronunciation of the Cochin-chinese language. The system of writing is the principal object in view.

The characters in the plates have been lithographed from the copy made of them by M. de la Palun; they are more legible than those in the original manuscript.

* Post, No. III.
M. de la Palum's manuscript is preserved in the library of the American Philosophical Society. The original Vocabularies will be returned to the East India Marine Society at Salem, by whom they were kindly lent to us for publication.

*Philadelphia, 14th Nov. 1837.*

---

**POSTSCRIPT.**

Since this Preface was written, and part of it being already in type, I have received from Lieutenant Godon, of the United States' navy, lately returned from a three years' cruise in the Indian Sea, with the squadron under the command of Commodore Kennedy, to be presented to the American Philosophical Society for their library, a valuable collection of printed Missionary Tracts and translations, and several Manuscripts, in the languages of the different countries bordering on that sea, of which I think it right to mention here the most important, for the information of American philologists. I stop the press to insert this short notice.

Amongst other donations of the same kind are the following:

1. A religious Tract in the Siamese language and character. The Siamese is classed by Adelung* among the the monosyllabic languages; the characters do not show it to be so; they are to all appearance alphabetical, probably syllabic. The words are separated as in our languages; some words have more than twenty letters.

2. A Manuscript in the same language, being several leaves taken from a book on Astrology. It is written on the leaves of the Tallipot, a species of Palm tree. The wri-

* Mithrid. vol. i. p. 92.
ting is elegant; the characters are the same with those in the printed tract, but their form is more acute. This was obtained by Lieutenant Godon with great difficulty, not without the aid of money.

3. A Manuscript Book in the same language. The subject of it is unknown, but it is of a popular character, and is supposed to be a tale, a kind of reading which the Siamese are very fond of. It is written on a single sheet of thick paper, but not stiff, like pasteboard, so that it may be folded without breaking. The sheet is of the length of twenty-two feet four inches, and thirteen inches in breadth (English measure.) It is black on both sides, and the writing is white; the letters appear as if written with chalk, but Lieutenant Godon says it is done with a pencil. The writing is beautiful; it has the appearance of our most elegant script calligraphy, much like what the French call écriture bâtarde, and the characters are not acute as in the other manuscript. The book, thirteen inches long and four inches broad, is only eleven inches in thickness. It is made up by folding the sheet like the leaves of a fan. Each fold contains two pages, of which this volume has sixty, being folded thirty times. It is so that popular books are written and made up, and Lieutenant Godon says they are very common. He saw several persons engaged in writing them.

3. Another Manuscript, written on Tallipot leaves, and in the Pali or Bali, the sacred language of ultra Gangetic India. Of this language very little is yet known. Messrs. Burnouf and Lassen, in a learned and interesting Essay, have shown it to have great affinity with the Sanscrit, and have expressed the hope "that it will soon become an important branch of the studies respecting Asia, which now engage the attention of the learned of Europe.*"

4. A Missionary Tract in the Birman language. Of what part or what dialect of the Birman country is not known; but it is presumed to be that of Ava, as the characters resemble those of which samples are given in Carpanus's Alphabetum Barmanum.* It is hoped, that now that the English are in possession of a great part of the Birman country, they will make us better acquainted than we are with their languages.

5. A religious Tract in the language of the Bugis, a people as yet very little known. They are the same people whom Adelung calls the Buggese; Malte-Brun les Boughièses.† They are said to be a savage people, who reside on the Bay of Bony, in the Island of Celebes, in the Indian Archipelago. I believe this is the first specimen that we have of their language. It was received from an American missionary at Siam. I have not time to examine the character and compare it with others. It is evidently alphabetical, and probably syllabic.

I do not speak of the Tracts, &c., presented by Lieutenant Godon, in languages that are better known; such as the Hindoostanee, Malay, &c. That officer deserves the thanks of the friends of science, for the zeal which he has displayed in its cause. In general, the officers of our navy have shown the greatest disposition to promote it.

The missionaries also are entitled to thanks. It is only to be regretted that, too exclusively intent on the great object of their mission, they do not give to their books a greater circulation, by sending some copies of them to be sold in

* Alphabetum Barmanum seu Romanum regni Avæ fúnitimarumque regionum. Romæ, 1776. Typis Sacrae Congregationis de Propaganda fide. This work is very rare; the writer is indebted for a valuable collection of the publications of the Propaganda, to the kindness of the Prince of Musignano, which he takes this opportunity to acknowledge.
† Mithrid. vol. i. p. 598.
the great capitals of America and Europe; or if, as is believed, they despise gain, present some at least to the principal libraries. It is wished also that they should devote a page or two in the English, or some other known language, to let us know the subject of their publications, and the language they are written in. If, as in most cases, they are translations, it would be of great advantage to philologists to refer them to the originals; the additional expense would be but trifling. It is hoped that this suggestion will be taken in good part by the venerable men to whom it is addressed.
PRELIMINARY OBSERVATIONS,

BY M. DE LA PALUN.

The text of Father Morrone occupies the left hand column in each page of this Vocabulary. We have thought it our duty to make no alteration in it, except correcting some faults in the orthography of French words, very excusable in a person who writes in a foreign language, in a distant country, where he has not the help of books.

The order of the Vocabulary has been followed, and the Cochinchinese words have been successively numbered, in order to facilitate a reference to the plates. The letters A, B, C, D, serve to designate the characters in the order in which they are placed under each other.

The asterisk (*) in the right hand column shows that the character designated by the number opposite to it is not found in the Chinese Dictionaries that we have consulted.

The letter M. Designates some one or other of Morrison's Chinese Dictionaries. When it is followed by a single figure, it indicates the number affixed to each character in the Chinese and English Dictionary, in which the Chinese words are arranged in alphabetical order; when followed by two or three figures, the reference is to the Dictionary in which the characters are placed in the order of radicals; the first figure refers to the volume, the second to the page, and the third to the column.
The letter G. indicates a reference to the Chinese Dictionary of Father Basil de Glemona, translated from the Latin into French, and published at Paris in 1813, by M. de Guignes. The figure which follows indicates the character referred to.

We have referred only to Morrison’s and Glemona’s Dictionaries, although we are possessed of several in the Chinese language: such as the Choue wen Kiasi Tseu, the Tchhouen tseu wei, the Thseng pou hiowan kin tseu wei, the Tching tseu thoung, the Khang Hi tseu tien, &c. Time did not permit us to go into this laborious investigation; the sinologists of Europe will be able to supply what is wanting in this hasty sketch, made when we were on the point of leaving this country (the United States) for the Republic of Venezuela, to which we have been ordered by our government.

M. Remusat, in his remarks on some syllabic writings drawn from the Chinese characters, (p. 46,) observes, that the calligraphy of the Cochinchinese essentially differs from that of the Chinese, and that the former inclines its characters from right to left as those we call italic. We have not been able to discover that difference in the manuscript of Father Morrone. The writing of that missionary is very bad; his characters are ill formed, and with a rapidity which has not permitted us to decipher them all. We have not been able to employ much time in the study of Chinese calligraphy; we therefore have to solicit indulgence for our inelegant manner of writing the Chinese characters. We have no pretention, in this respect, than to represent exactly the number of strokes of which they are composed, and in a manner sufficiently distinct, that they may be known without hesitation by any one who is in the least acquainted with the language of Confucius.

Father Morrone has prefixed the characters to each word in his Vocabulary, written horizontally in succession from left to right, in the same manner as Dr. Morrison has done
in his Anglo-Chinese Dictionary; we have thought it best to write them separately in columns, marked with successive numbers, by which we refer to them in the Vocabulary. The columns are arranged so as to be read from left to right, in the European manner.

Father Morrone indicates the pronunciation of the Cochinchinese vowels by three kinds of accents:

The first (ä) shows that the syllable is to be pronounced short.

The second (ä) that the vowel is open.

The third (ö) placed on the vowel o, shows that it is to be pronounced like the French a, (perhaps he means eu); on the letter u, that it is to have the sound of that letter in French.

The o without an accent, as in long, the heart, has the sound of ao, probably as ow in the English word now; sometimes it has the sound of the French diphthong au, as in ngon, finger.

He also says that the Cochinchinese language is sung, and that it has different tones like the Chinese. According to him, there are six tones in the pronunciation of that language, which he distinguishes by the signs (.) (') (') (2) (–). The first of these tones, which serves as the basis of the tonic scale, has no sign to distinguish it. We have omitted these last signs in copying the Vocabulary.

We can hardly believe the Cochinchinese have six tones. The missionaries of Peking had carried to five the number of those of the Chinese language, because they did not examine with sufficient care the assertions of the Chinese grammarians, who have sought differences in intonations which escape the delicate ear of poets, and which consequently, if they are real, can only exist for purists, and are of no kind of use.

We have not copied two Cochinchinese phrases, of which Father Morrone has endeavoured to represent the pronun-
ciation by means of the notes of our musical scale. It has been long since demonstrated that those notes cannot represent the pronunciation of any language, and that it is in vain that missionaries have endeavoured to show an analogy between two systems that have nothing common between them.
VOCABULARY
OF THE
COCHINCHINESE LANGUAGE,
WITH MARGINAL NOTES,
SHOWING ITS RELATION TO THE CHINESE.

I.—OF THE HEAVENS.

19
Cochinchinese.

Chinese.

neric for all the virtues. Thus, 
*Dui lin*, faith; *dui cau bang*, justice, &c. It is also used as an adjective for *most excellent.*

The second syllable is represented by the Chinese character *tchu*, dominus, (G. 35,) and has the same signification.

For the third syllable *troi*, see above, No. 1.

[Thus God is called "the most excellent Lord of heaven."]

The Court of Rome has decided that *thian* or *tien tchu* (the Sovereign of heaven) is the most suitable way of expressing in Chinese the idea of God.

Theological expressions in this Vocabulary may be generally considered as devised by Europeans.

3. Thien dang.

Le Paradis.

*Paradise.*

[Mr. Morrison writes it *T'heen*. M. 576.]

B. *Thang*, a hall, a temple. G. 1633.

[*Thang*, a dignified, honourable mansion; a palace; a temple; a court or hall of justice; a hall or public room. M. 512.

These words mean, therefore, "The palace or the temple of heaven." The Chinese say the *garden*, M. verbo *Paradise.*]
4. Thien Than. 
Les Anges. 
Angels.

5. Thanh. 
Les Saints. 
The Saints—Christians.

6. Dui chua ba. 
La mère de Dieu. 
The Virgin Mary.

7. Mat troi. 
Le Soleil. 
The Sun.

8. Mat trang. 
La Lune. 
The Moon.

Chinese.

A. See above, No. 3.

B. Chin, [or Shin,] a spirit. G. 7025. [M. verbo angel.] It is the expression used by the Jesuits in China.

This appears to be an abbreviation of the character Ching, by which the Christians in China express the same idea. G. 8360. [M. verbo Saints.]

For A and B, see No. 2.

C. Phu, a woman's name. M. 1. 610. 2.

In Cochinichinese Ba signifies Queen. See the Dictionary. So the Virgin Mary is here called "The most excellent Lady and Queen."

In some Chinese books, the Virgin is designated by the words Ching mou, the Holy Mother.

A * is composed of the 176th Chinese radical mian, a face; and the 75th mou, a tree or wood. This last appears to be intended to indicate the pronunciation. [B. See No. 1. A.]

Klaproth (Asia Polygl. 369) nhot, nhit. Balbi (Atlas) mat bloi (the sun.)

[A. See above, No. 7. A.]
Les Etoiles.
The Stars.

10. Anh Sang.
Les rayons du soleil.
The Sun's rays.

La Lumière.
The light.

L'air.
The air.

Les nuages.
The clouds.

B.* This character is composed of the 74th Chinese radical youei, the moon; and the Chinese character ling, high, eminent. G. 1777.

[The Cochinchinese Dictionary has the following, verbo trang: Trăng vel blang, Luna.
Trăng, albus, a, um; the latter has an acute accent on the a, which the first has not.

The word trang, variously accented, has several other significations. See the Dictionary.]

Klaproth, blang; Balbi, mat blang.

A. Chinese wei, a high hill. M. 2. 46. 2.

B. Sing, the stars. G. 3900.

A. Chinese Han, to dry by the fire.
G. 5521.

B. Perhaps tchhouang, to begin. G. 829, or a sharp sword. G. 743.

* [Chinese kwang. Same meaning, character different. M. 6707. Also, in Anglo-Chinese Dictionary, verbo light.]

Chinese khi, the air. G. 4828.

* This character seems composed of the 173d Chinese radical, tu, rain; and a group which is pronounced mey. See G. 11973.

This explanation, however, is only conjectural. Klaproth gives mua, in Anamitic for the clouds.
   Le tonnerre. Chinese.
   * The 173d radical tu, rain, and the group Cho or Tsuh [to lay hold of, to catch.] M. 1178.

15. Chop.  
   La foudre.  
   The thunderbolt.
   * The group is pronounced yu. G. 250. Klaproth, djo.

   Le vent.  
   The wind.

17. Thuyet.  
   La neige.  
   The snow.
   Sionei [the snow.] G. 11948. Klaproth, thouyet.

18. Mua.  
   La pluie.  
   Rain.
   * The same as No. 13, with part of the radical 162.
   [This radical, in Remusat’s Chinese Grammar, is tchho, to walk (mar- cher); in Marshman’s Clavis Sinica it is Vih, a city.]

19. Mu Suong.  
   La rosée.  
   The dew.
   B. Chouang, a white frost. G. 11984.

II.—Of Time.

   Le temps.  
   Time.
   Khi, to despise. G. 4613.  
   In Chinese time is called chy. G. 3376, 3914. [But the character is different. M. 435.]

21. Doi.  
   Le siècle et la vie.  
   The age and the life.
   Tay, generation. G. 112.

22. Doi Doi.  
   L’éternité.  
   Eternity.
   * [Ages-Ages. A word probably coined by missionaries.]
23. **Nom.**
   **Un an.**
   A year.

24. **Nom truoc.**
   **L’an passé.**
   The last year.

25. **Nom sou.**
   **L’an prochain.**
   The next year.

26. **Thang.**
   **Le mois.**
   The month.

27. **Ngai.**
   **Le jour.**
   The day.

28. **Tuan le.**
   **La semaine.**
   The week.

---

**Cochinchinese.**

*This is composed of two Chinese characters. That on the left, which is pronounced nan, means the south; that on the right, hian, means a year.*

---

**Chinese.**

A. See No. 23.

B. Appears to be a different form of G. 6217. [Lio, modicum, parum; terminus, as who should say, the year now ended or terminated.]

I can only find this character as a group with the 66th radical, in Sou [or Soo] to reckon, to count, to number. G. 3769. M. 9521.

This group in Chinese is pronounced Shang. The 74th radical, youei, which signifies moon, or month, has been added to it.

This group is often employed for the character Tung, companions. G. 13152.

*This group is pronounced gai.*

M. 2793. [The character on the left hand is the Cochinchinese form of the Chinese radical 74, youei, the moon. On the right is the character gai or gae, an impediment, probably to indicate the pronunciation. M. 2795.]

A. Siun, a period of ten days. G. 3869.

B. Ly, a rite, usage, custom. G. 6992.
29. Khac. Khe, the eighth part of the Chinese
Un quart d'heure. hour (fifteen minutes.)
A quarter of an hour.

Les heures. The hours.

31. Lat. * The first character is probably an
Un moment. abbreviation of the second, which
A moment. in Chinese is pronounced la.

32. Som mai som. A. Khin, [to grasp or hold in the
De bon matin. hand.] M. 3. 558. 2.
Early in the morning. B. May, to conceal. G. 1610.
[C, is A repeated.]

33. Nua ngai. A. Pwan, a woman during the pe-
Midi. riod of her monthly courses. M.
Noon. 1. 621. 2.
This group is composed on the left
of the 38th radical, niu, a woman,
probably to indicate the pronun-
ciation. On the right is the Chi-
nese group Pouan, which signifies
half. G. 1001.
B. This group is pronounced gai.
[On the left, 74th radical, youei,
the moon; on the right, gae, to
hinder. M. 2824.]

34. Chieu. Chao, the morning. G. 4046.
Le soir. The evening.

La nuit. The night.
Cochinchinese.

36. Bua hom nai. Aujourd'hui. To day.

A. Po, [waves, to move, to agitate.] G. 4924.
B. Hin, to rejoice. G. 4624. [But see No. 37.]
C.* Probably Na, [to press hard with the hand.] G. 3413.

[In the Dictionary we find ngay hom; nay, hodié, which would seem the better mode of expression. Ngay signifies day. See above, No. 27. The Dictionary gives hom vesperè, and nay appears to be the pronoun this; den nay, hac nocte; mon nay, hoe anno. Bua, in the Dictionary, accented as in this Vocabulary, is rendered by negotia.]

A.* B, 62d radical, ko, a lance, (arma.)

[Hom, vesperè; qua, transire. See the Dictionary, his verbis.]

38. Hom kia. Avant hier. The day before yesterday.

A.* [See above, No. 37.] B. Kŷ, he, his, this, (pronoun.) G. 618.

A. Tien, law, rule, precept. G. 620.
B. Same as No. 32 B.

40. Den mot. Après demain. The day after to-morrow.

A. Same as No. 39 A.
B. Mie, bamboos divided into small sticks. G. 7571.

It might be the same group with the 140th radical, thsuo, [a plant.]

A. Same as No. 27.
B. Same as No. 28 B.

Cochinchinese. Chinese.

47. Mua xuan. A. [Same as 46 A.]
Le printemps. B. Tchun, the spring. G. 3903.
The spring. Klaproth, muan.

48. Mua thu. A. In this character, the 110th radical is probably omitted by error.
L'automne. See above, No. 46 A.
The autumn. B.* The autumn, thsieou, is written differently in Chinese. G. 7125.

Instead of the 76th radical, [khian, expiration, insufficient,] it has the 86th, [ho, fire.]

49. Ngay nang. A. [See above, 41—44.]
Un jour de chaleur. B.* The group is pronounced nang.
A warm day.

50. Ngay lahn. A. [Same as 41 A.]
Un jour de froid. B. Leng, cold. G. 676.
A cold day.

51. Ngay xau. A. [Same as 50 A.]
Un jour de mauvais temps.
A day of bad weather.

52. Ngay tot. A. [Same as 51 A.]
Un beau jour. B. Tsou, to finish. G. 1008.
A fine day.

III.—Of the World, &c.

53. The gian. Chi kian, the world.
Le monde. [A. She, the world of human beings, the present state of existence.
The world. M. 475. 2.

B. Wan, to ask, to inquire, to investigate. M. 11613.
54. Dat.

La terre.

The earth.

Tan, flat, even, [ample, spacious.]

G. 1578.

55. Non nui.

Une montagne.

A mountain.

A. The group is pronounced nun.

B.* The group is pronounced nouy.

Klaproth, mi.

56. Rong.

La campagne.

The country (rus.)

* I consider this group as an abbreviation of the 212th radical, loung, [a dragon.]

57. Vuon.

Le jardin.

The garden.

A.*

B. Youen, round. G. 1542. Youen, a garden, G. 1541, has a different character.

Klaproth, Uoeu.

58. Cay.

Les arbres et les bois.

The trees and the woods.

He, the stone or seed of a fruit. G.

4214. [M. 242, verbo kernel.]

59. Re.

Une racine—radix.

A root.

60. Goe.

Le tronc.

The trunk (of a tree.)

Ouo or wo, a house; [to dwell.] G.

2246.

The trunk (of a tree.)

O or uh, a wooden screen. M. 2.

258.

61. Nhanh.

Les branches.

The branches.

Seems to be a variation of the Chinese ting, which has the same meaning. G. 4258.

62. La.

Les feuilles.

The leaves.
Cochinchinese.  

63. Hoa.  
Les fleurs.  
Flowers.

64. Hot giong.  
La semence.  
The seed.

65. Da.  
Une pierre.  
A stone.

Chemin, rue.  
A way, a street.

67. Rung.  
Forêt—silva.  
A forest.

68. Vuonnho.  
Jardin de vignes.  
A vineyard.

69. Buong nho.  
Raisin.  
Grapes.

70. Chuoi.  
Figues.  
Figs.

71. Suoi.  
Une fontaine.  
A fountain.

72. Giang.  
Puits—puteus.  
A well.

Chinese.

Houa.  G. 8844.

A. He, a thick silk thread. G. 7755.

B. Tchong, a seed.  G. 7206.

Tang, the name of the imperial dynasty from the year 618 to 907 of the vulgar era; [also, the aisles or walks in ancient temples, (via in avorum templis.) G. 1276.]

Ling, an angle; a square piece of wood. G. 4320.

A. Youen.  See No. 57 B.

B. Mei, the trunk of a tree.  G. 4138.

C.* Probably a variation of B.

A. Wang, a name of wine.  M. 3. 549.

In the MS. the two dots below the group are wanting.

B.* Same as No. 57 B. and 68 A.

Tchy, shackles (compedes.) G. 4232.

King.  M. 2. 458. But the group without the radical is pronounced tsing, and signifies a well. G. 70.
Cochinchinese.

Chinese.

* Might be Shing, the name of a river. M. 9303. See No. 56. [The two characters are the same, one to signify the country, the other a river.]

Po, a hillock, a mound of earth for a sepulchre. G. 1574.

* See No. 82.

A. is the 182d radical [foun, wind.]

B.*

* The group is pronounced tchi. [It has on the left the 137th radical, tcheou, ship.]

A.* The 169th radical [men, door] never has a group to the right.

B. See No. 75.

A. Kiu, a bank to confine water.

B. Lao, to labour. M. 6925.
Cochinchinese. Chinese.

84. Nuoc. Hwuls, the sound or noise of water. M. 2. 483.
Un royaume. A kingdom.

85. Xa. This character has some resemblance to tchu, to dwell, to tarry; also, a place, a region. G. 9361.
Une province. A province.

Une ville. A town.

Un village. A village.

88. Que. Kwei, a kind of sceptre. M. 1. 481. 2.
La patrie. The fatherland (patria.)

The fatherland (patria.)

89. Ben bai. A.*
Le partie du nord. B. Pe, the north. G. 953.
The north.

90. Ben dong. A.*
La partie de l’est. B. Tong, the east. G. 4108.
The east.

91. Ben nam. A.*
La partie du sud. B. Nan, the south. G. 1010.
The south.

92. Ben tang. Si, the west. G. 9852.
La partie de l’ouest. The west.

IV.—Of MANKIND.

93. Don ong. A.*
Un seigneur. B. Ong, a name of honour given to old men. G. 8231. [Senior, Signor, Seigneur, &c.]
Cochinchinese.

94. Don ba.  A.*
Une dame.  B. The second character only is
A lady.  found as a group with the pro-

L'homme.  B. Sie, a little, not much.  G. 74.
A man.

96. Loai nguo ta.  A. Luy, a class, species, sort, kind.
Le genre humain.  M. 7431.
Mankind.  B. C. See No. 95.

97. Cha.  [The honourable class or species.]
Le Père.  Tcha, to be angry, to scold. G. 1147.
Father.

98. Me.  Mai, a woman of an elegant figure
La mère.  and pleasing countenance.  M. 1.
Mother.

99. Con.  Kouen, the elder child (natu major.)
Les enfants.  G. 3883.
Child.

100. Con trai.  [A. See 99.]
Un garçon.  B.* The group on the right is pro-
A male child, a boy.  nounced lai.

101. Con gai.  [A. See 99.]
Une fille.  B. Hoo, good and beautiful.  M. 1.
A female child, a girl.  607.

102. Con it.  [A. See 99.]
Un enfant.  B. This looks like the 5th radical,
A child.  y [or yih] one, unity.

103. Con no.  A. See 99.
Un mourning.  B. Iu, milk, woman’s breast. G. 56.
A nursling, a child at
the breast.
160

Cochinchinese. Chinese.

104. Con tre.*
Un jeune homme.
A youth.

105. Gia.*
Un vieillard.
An old man.

106. Chong.
Le mari.
Husband.

107. Vo.
La femme.
Wife.

108. Dong trinh.
Une vierge.
A virgin.

Une veuve.
A widow.

110. Chau.
Le neveu.
Nephew.

111. Ba con.
La famille.
The family.

* Character unknown. The pronunciation does not much differ from the Chinese foo or fou [or foo] above cited.

A. Tong, childhood. G. 7372.

B. Tching, upright and firm (morally speaking.) G. 10410. Thoun g tching, a virgin.

[Thus a virgin in Chinese is called thoung-tching, as who should say a virtuous child, and the same in Cochinchinese. This reminds us of the Delaware word pilape, a chaste or innocent man, meaning a youth under fifteen.]

A. See No. 94.
B.*

Tchao, to call somebody by making a sign with the hand. G. 3316.

[Woman-child, or lady and child. See Nos. 94 and 102.]
Cochinchinese.

112. Ho hang.
Les parents.
The kindred.

113. Dian.
Le peuple.
The people.

114. Vuo.
Le roi.
The king.

115. Hoang hau.
La reine.
The queen.

116. Quan.
Les ministres.
The ministers.

117. Ten linh.
Les soldats.
The soldiers.

Chinese.

A. is the 63d radical, hou, a door.

B. is the 144th radical, king, to advance (progredi.)

Min, the people, the subjects. G. 4822.

118. Xac.
Le corps.
The body.

119. Dau.
Le tête.
The head.

120. Toc.
Les cheveux.
The hair.

V.—Of the Human Mind and Body.

Teou, [the head.] G. 1222).
Cochinchinese. | Chinese.
---|---
121. Thi. | Tchy, wisdom, prudence. G. 3949.
   L'intelligence. | 
   *Intelligence, understanding.*
   La volonté. | B. *Men, sad, (tristis).* G. 2887.
   *The will.*
123. Su nho. | A. Sse, business, affair, thing, occupation. G. 64.
   La mémoire. | B. This character, very ill drawn, has some resemblance to that which is pronounced ngo or 'o, (I, ego.) G. 3177.
   *Memory.*
   L'âme. | 
   *The soul.*
125. Oc. | Thheou, the front. M. 3. 693.
   Le cerveau. | [In his Anglo-Chinese Dictionary, Dr. Morrison gives gih for forehead, with a character that resembles only in part the Cochin-chinese. Under the word *front* (outside surface) he gives the word *fan meen,* with two other characters.]
   *The brain.*
126. Tran. | 
   Le front. | 
   *The forehead.*
   *The eyebrows.*
   Les yeux. | B. *Mo,* dim-sighted eyes, (oculi obscuri, caligantes,) G. 6627, is composed of the same group and
   *The eyes.*
163

Cochinchinese. Chinese.

the same radical, but in an inver-
ed order. See above, No. 7.

129. Tai.
Les oreilles.
* The ears.

130. Mat.
La face.
* The face.

131. Ma.
Les joues.
* The cheeks.

132. Mui.
Le nez.
* The nose.

133. Mei.
Les lèvres.
* The group is pronounced mei.

134. Rang.
Les dents.
* The teeth.

135. Luoi.
La langue.
* The tongue.

136. Nou.
Le palais.
* The palate.

137. Mieng.
La bouche.
Haou, the roar of a wild tiger. M. 1. 380.

The Cochinchinese character is
formed of the 30th radical, which
signifies mouth, and of the 108th,
ming, [a porringer,] to indicate
the pronunciation.

See Nos. 7, 8, and 128.

Appears to be a variation of ngo,
* bang ngo, the space in the mouth
between the upper and the nether
lip. G. [13280,] 13281.
138. **Hong.**
La gorge (guttur.)
The throat.

Maison de campagne. A. See above, No. 180.
A country house. B. The group is pronounced *kouang.*

185. Voch. [See above, No. 56, where the word is written *rong.*]
Les murailles. The same group in Chinese, with
The walls. the 90th radical, *tchouang,* [a bed.]
signifies *walls,* and is pronounced *tsiang.* G. 5619.

186. Cua. This is the 169th Chinese radical,
La porte et le port. *men,* [door.]
The door and the port.

187. Cot. Koue, a stake, a small column. G.
Une colonne. 4503.
A column. The same character, with only a
small variation.

188. Thong. Yang, [oziers or twigs, (vimina.)]
L'escalier. G. 4369.
The stairs. In some compositions it is pro-
nounced *tang.*

189. Phong. Fang, a dyke or embankment, G. 11756.
La chambre. (agger.)
The room or chamber.

190. Moi. These two characters having but
Le toit. one pronunciation, it is probable
The roof. that the Cochinchinese used indifferently the one or the other.
A. *May,* to purchase. G. 10437.
B. *May,* to sell. G. 10486.
[These characters are evidently applied to the sound.]

191. Ngai. *To this pronunciation are prefix-
Les tuiles (canales.) ed the two characters which ac-
Probably the gutters. company that of the following
number; there is probably an

22 error.
192. Truoc y.  
La chaise.  
The chair.

Un miroir.  
A mirror.

* This character calls to mind king, term, end, confines, limits, G. 7366, which is employed to indicate the pronunciation in king, a mirror. G. 11565.

194. Anh.  
L'image.  
The image.

Les oreillers.  
The pillows.

199. Giay.  
Le papier.  
Paper.

200. Long ga.  
La plume.  
The pen.

201. Muc.  
L'encre.  
Ink.

202. Xe.  
Une voiture.  
A carriage.

* This character calls to mind Yng, a shadow. G. 2669.

A.*  
B. Tchouang, a bed. G. 2500.

Men, a rope or cord of bamboo. G. 7885.

Mong, a dream. G. 1793.

Hoey, to paint. G. 8036.

Sie, to tie, (ligare.) G. 7823.

This is an abbreviation of ne, black. G. 1709. It also signifies ink.

Radical 159. Kiu, [a car or carriage.]
Cochinchinese.  
203. Binh muc.  
L’encrier.  
The inkstand.

Chinese.  
A. This character, says Mr. Morrison, occurs in an ancient work; but neither the sense nor the sound is known. M. 3. 563. The group is pronounced ping.

B. See No. 201.

204. Sach.  
Un livre.  
A book.

205. Sach kinh.  
Un livre d’oration.  
A book of prayers.

206. Sach truyen.  
Un livre d’histoire.  
A book of history.

207. Den.  
La lampe.  
The lamp.

* This group is in part composed of the 102d radical, [clavis agro-rum,] which is pronounced tien, but its meaning has no connexion with that of the Cochinchinese word.

208. Chon den.  
Le chandelier.  
The candlestick.

209. Diou.  
L’huile.  
Oil.

210. Sap.  
La cire.  
Wax.

A. See above, No. 204.

B. This appears to be king, (liber classicus,) the name of the five classical books, of which an ancient form is given by Morrison. M. 3. 15. It has besides much resemblance to the Cochinchinese character.

[A. See 204.]

B. Tchouan, traditions. G. 408.

[A. See above, 162.]

[B. See above, 207.]

Yeou, oil. G. 4899.

La, wax. G. 9616.
Cochinchinese. Chinese.

211. Hom. Se or tse, a wood fit for making the wheels of a large carriage. M. 2. 388.
   Une caisse.
   A box.

212. Khoa. *
   La clef.
   The key.

   * [Father Morrone wrote this word la claise instead of la clef. M. de la Palun read it le glaive. It is believed that la clef is the better reading.]

213. Diao. 18th radical, tao, [a knife.]
   Un couteau.
   A knife.

   Un rasoir.
   A razor.

215. Guom. B. This, with a small variation, is the character ko, a boiler; pronounced at Canton wo. M. 6427.
   Une épée.
   A sword.

   Fusil.
   A musket.

   Les ciseaux.
   Scissors.

218. Hop. Composed of three radicals: 167, [kin, gold;] 111, [chin, an arrow;] and 68, [kou, a measure of capacity.]
   Une tabatière.
   A snuff-box.

219. Thuoc. Han, to contain as any vessel. M. 3. 569.
   Le tabac.
   Tobacco.

220. Hit thuoc. Tung-fung, the name of a plant found in Canton province. M. 3. 172. Chinese radicals 73, 75.
   Tabac à priser.

Gold.
L'airain.
Brass.
239. Sat.  Tchy, [to sew clothes.]  G. 11419.
Le fer.
Iron.
240. Thiet.  To, the end of a cart axle-tree.  M.
Le fer blanc, (stannum.)  3. 577.
Pewter or tin.
Cochinchinese.  Chinese.

241. Chi. Y, a sort of kettle. G. 11407. The 65th radical on the right is pronounced tchi, but is unconnected with the sense. It means a branch.

Le plomb. 

Lead.

VIII.—Of the Table, &c.

242. Bon. * See above, No. 164 A.

La table. Table.

243. Chia. This is the same character as No. 241, with a different meaning and pronunciation.

La fourchette. Fork.

244. Dia.

Les plats. The dishes.

* The group is pronounced tchen.

245. Chen.

Le verre. A glass to drink out of.

A. Tchouen, baked bricks. G. 1684.

246. Bat.

Une tasse de terre. B. * The group on the right, which is the numeral 8, is pronounced pa.

An earthen cup.

247. Va. The group appears to be written in a running hand; it is thought useless to hazard conjectures.

Une bouteille. A bottle.

248. Va chai. *

Bouteille de cristal. A glass bottle.

249. Va lanh.

Bouteille de terre. An earthen jug.

An earthen jug.
Cochinchinese.

250. Muong.
   Une cuiller.
   * A spoon.

251. Banh.
   Le pain.
   * Bread.

252. Ruou.
   Le vin.
   * Wine.

253. Diam.
   Le vinaigre.
   * Vinegar.

254. Nuoc.
   L'eau.
   * Water.

255. Thit.
   La chair.
   * Flesh or meat.

256. Ca.
   Le poisson.
   * Fish.

257. Trai.
   Les fruits.
   * Fruit.

258. Cam.
   Les oranges.
   * Oranges.

259. Com.
   Le riz.
   * Rice.

260. Ot.
   Le poivre.
   * Pepper.

Chinese.

* The group is pronounced meng.

* It is to be remarked that the characters G. 12348 and 12377 are pronounced ping, and signify bread.

* Perhaps a variation of liou, a name of liquor. M. 3. 546. 2.

* The group is pronounced ting.

* The group is pronounced no.

Thian, fat. M. 3. 98. 2.

Ko, fruit. G. 8991.

Kan, a kind of sweet orange. G. 4161.

* The 69th radical on the right, which means sweet, and is pronounced kan.

A. Ngan, hard. G. 4125.

B.*
Cochinchinese.

261. Muoi.  
Le sel.  
Salt.

262. Dano.  
Le sucre.  
Sugar.

263. Mot.  
Le miel.  
Honey.

264. Mut.  
Les confitures.  
Sweetmeats, preserves.

265. Tra.  
Le thé.  
Tea.

266. Dot long.  
Le dejeuner.  
Breakfast.

267. An bua trua.  
Le diner.  
Dinner.

268. An bua thoi.  
Le souper.  
Supper.

Chinese.

* The group is pronounced mei.

In Chinese, sugar is called tang, and is written with the same group, either with the 119th or the 184th radical.

* It is a variation of mi, honey. M. 7666.

IX.—Of Animals.

269. Cam tu.  
Les animaux.  
The animals.

A. Hoey, all (omnes); [to collect, assemble, unite.] G. 4025.

B. Cheou, quadrupeds. G.* 5870.

Doc, subvertere. Doc lao, decernere, proponere in animo. 

*Doi lai*, resilire.

Doi, fallere. Noi doi, mentiri. Phai bo cac su doi bla, oportet relinquere omnia vana et superstitiosa.

Dor, indoctus. Dot nat, valdè ignarus. Dot, furunculus. 

Dot, stillare, stillicidium. Nha dot, stillat domus.

Do, sordes. Trai chieu dap do, quaerere artem malitiam tegendi. Lam ra do, polluere.

*Do dang, nguoï do dang*, homo imprudens, importunus.

Viec bo do, opus interruptum. Do viec, impeditus ne-gtioi.

Do *nha*, destruere domum.

Dor, *cai doi*, vespertilio. Lam doi lam chuot, dicitur de homine versipelli qui varium et mutabilem se exhibet.

Doi *di*, aliò ire.

*Dot vel nhot ca*, sordes ad instar sputi quæ adhærent pisci-bus.
Du lao thuong, exhibere misericordiam, liberalitatem, quando est sermo de regibus ad populum. Du man xuo, depone velum. 
Duc, vide dam. Blai muc duc, renes. 
Dui, furtis, vel ictus verberis; lignum quo pulsantur instrumenta. 
Dum da, vel dum da, cay dum da, arbor pulchrè frondescens. 
Dum, nguoi dum chan, qui habet pedes ex morbo tumidos. 
Du yen, pulchritudo in vultu. Du yen do lam sao, vide do lam suo. 
Dung, uti. Dung chang nen, abuti. 
Du, superesse. 
Du, may la du nao, cujus ordinis es tu? vox interrogantis per contemptum. Chang vao du nao, nullius ordinis, nullius valoris est. 
Cho du, canis ferex. 
Dua hau, pepo aqueus. Dua chuot, cucumis. Dua gang, etiam. Species peponis. Dua, olus sole* conditum. 
Dua, inniti columnae. Gummi etiam vocatur dua. 
Dua, nuces Indicæ, Lusitanicæ coco. 
Duc lac, elàtæ voce loqui moræ objurgantis. Sumitur etiam pro objurgare, reprehendere. 
Douai chan ra, extendere crura. 
Dut. Vide dat. 

* Sic in MS.
Duoi, infra. Tren bloi duoi dat, in cælo et in terrâ. Kinh ke be tren, yeu ke be duoi, venerari superiores, et amare inferiores.

*Duom de, nguoi duom de,* homo gravis et mansuetus.

*Duong nao, quomodo?* D. C. B. phep tac la duong nao, ta suy chang di, quomodo sit divina potencia, comprehendere non possimus. Tren thien dang vui ve la duong nao, in cælo quale gaudium est. Am duong, vide *am.*

Duong, nutrire, fovere, indulgere. Duong duc cha sinh, me duong, pater genuit, et mater nutrivit. Chang nen duong xac qua, non licet indulgere corpori plus quam oportet. Dao duong, favere.

**Da,** adminiculum ad aliquid trahendum.

**Dac,** *mot dac ruo,* latifundium.
DAC, aliquid solidum, ut lignum.
DAC, invenire, posse. Tra cho doii that, inquirere veritatem.
DAI, cingulum latum ex corio, vel ex duro serico.
DAI, magnus, a, um; vel præcellens cæteris in aliquâ re.
DAI thanh, magnus sanctus. Dai lam bieng, summë piger.
DAI hang, ruburba.*
DAI, mingere. Urbanius dicitur tieu tien. Muoc tieu, urina.
DAY, species herbæ.
DAY, tegere. Che day, idem.
DAY, exilium. Day di, mitti vel mittere in exilium.
Day vel tai day, mantica magna.
DAY, hic. D. C. B. co day chang? Deus est ne hic?
DAY, illic. No lam di gi day? Quid facit illic? Dau day, passim. Dau day deu tho phuong D. C. B., passim colitur Deus.
DAY, plenus, a, um. Day garassa, gratiâ plena. Day lao chung toi, impleantur corda nostra. Day to, discipulus, famulus. Day day, abundant, abundant.
DAY, pellere. Noi dun day di, conari verbis difficultatem aliquam à se repellere.
DAY, crassus, pinguis. Day da, idem est.
DAM, contendere pistillo vel pungere. Dam gao, xay lua, tundere et molere oryzam. Coi dam, vide coi.
Dam dap, idem est day da.
DAM, pugnare sine armis. Mot cai dam, unus pugnus. Cai dam dam, avicula quædam.
DAM, stagnum magnum. Dam am, vide am.
DAM, concursus vel celebritas aliqua. Dam ma, exequiae. Dam hat, publicæ comediae. Dam ben dai, solemnitates infidelium. Dam dat, cumulus terræ. Dam may, nubes dense.

* Sic in MS.
DAM, fel. Nguoi dam lam, homo bene audax, cordatus.
DAM, dam tau, naufragium. Dam duo, mergi vel capi. Dam duo, naufragium, turpi suipsorum amore capi. Lao con chang nen duo nhung su the gian, cor tuum non debet immergi rebus mundanis.
DAM, trau dam, bubalus se aquis aut luto immergens.
Dan, texere cistas aut alia instrumenta.
Dan, globi tormentorum. Dan duoc, globi et pulvis tormentarius.
Dan, bat dan vel bat da, scutella seu porsulana annamitica. Dan don, tardus ingenio.
Dang, dūm aliquid actualiter fit; et semper sequitur nominativum antè verbum, ut, D. C. J. dang giang, thi co mot ba kia khen nguoi, Christum actualiter praedicantem laudavit quædam mulier. Dinh, cacumen.

Dinh, buleuterium, seu locus negotiis publicis destinatus. Ngua dinh pho, veredus.

DIT, crepitus ventris. Danh dit, pedere. Rusticè ram.

DIT, clunis.

Diu, ran diu diu, quidam serpens.

Diu dit, molestia, quam patiuntur qui infantes et pueros sequum ducunt.

Do, metiri cubito aliquid.

Do, componere vel comparare aliquas res ad invicem, ad scientum earum longitudinem vel qualitatem.

Do, genus assæ. Day do, illic, istic.
Do, linter ad trajicienda flumina. Lam do vel gia do, simulare se.

Do, lusores qui pugnam agunt ad populi recreationem. Kinh do, aula.

Do, gradus geometricus. Do ba bon ngay, circiter tres quatuorve dies. Toi bo dac kinh do nam sau lan, omisi recitare preces plus minusve sexties.

Do, cai do, ligna quibus construitur paries. Deu do, problema. Tao do may, etiam provoco te, jubeo, aude.

Doa thai, foetus effusus ante tempus ex imperitiat medici. Thuoc sa con, medicina ad procurandum abortum.

Doi den, lanx parva quæ in lampadibus adhibetur.

Doi, esurire. Doi khat lam, fames magna. Kho khan doi
khat, pauperes esurientes. Doi cho an khat cho uo, cibare esurientem et potum dare sitienti. Ai doi khat sa phup duc, ay la phuc that, beati qui esurient et sitiunt justitiam.

Doi, contendere verbis. Doi co vel doi choi, idem significant. Doi xet, respondere in judicio. Mot doi, unum par.

Doi, gerere aliquid super capite. Doi mu, gerere biretum.

Doi on, gratias agere Deo vel superiori. Doi quan, cohors militum. Bay doi, ordinare aciem.

Doi, correspondere ad alterum. Cau doi, versus qui habent sensuum correspondentiam.

Doi, colles. Blai doi, idem est.

Doi, commutare. Ta phai doi sou doi nay ma lay sou doi sou, debemus commutare hanc vitam presentem pro alterâ futurâ. Doi doi, vicissitudo sæculorum.

Doi, ban do, vendere cum pactu restituendi.

Doi, juvare, sufferre.

Doi doi vo cung, in sæcula sæculorum, sine fine.

Dom, faces. Dom duoc, idem. Tay cam dom, chan dap do, qui tenet lucernam et sibi non illuminat. Cai dom dom, lampiris vel noctilux.

Dom, lam dom, idem est ac lam do.

Dom, cibum abaco apponere. Dom com, apponere oryzam.
Dom ou ba, ou vai, cibum offerre suis mortuis. Noi dom dat ra, multa mendacia loquendo effingere.

*Dom vel dom danh*, flegna. Thuoc dom, medicina ad dissipandum flegma.

*Don tri*, obtusum ingenium. Thay khoa don, sortilegos.

Dom, divulgare. Tieng don ra, fama, rumor. Tieng may don khap mai noi, fama tua vulgatur per omnia loca, vel longè lateque diffunditur. Iste modus loquendi potest sumi in utramque partem, id est, bonam vel malam. *Don thu vel don quan dao*, præsidium, arx. Daong don, castra ponere.

Dom, morbus quidam. Ao don, vestis simplex.

*Dom*, vide *dau don*. Nguoi don mat, homo vilissimus. Don chiec, solus, sine adjutore.

Dom, incendere. Dot nha, incendere domos. Ao dot, mui dot, apes et culices pungunt.

*Dou*, *ben dou*, oriens. Mua dou, hiems. Gio dou, Eurus.

Du, dann du, lusus quo juvenis unus et una puella, funibus imixxi, sese in altum ejaculantur; quod valde inhonestum est ac periculosum, ac Ideò graviter prohibitum à missionariis est. Cai du du, quædam arbor, Lusitanicè papaja vocata.

Du hon vel du hoi, lascivire. Convenit magis animalibus quam homini.

Du, sufficere; vel cho du, sufficienter, satis. Aliquando usque ad: Con, phaï doc mot ngay ba kinh thien chua, cho du muoi ngay, debes, fili, recitare unà die ter Pater nost- ter, et sic usque ad decem dies.

Dua, cai dua di, per fas et nefas contradicere.

Dua, bacilli quibus ad comedendum utuntur. Be dou tien chiec dua, testimonium repudii apud Tunkinenses.

Duc, conflare aliquid ex òre, auro, argento, &c. Tho duc, furor.

Dui, cæcus, a, um. Mu toi mat, idem sonant.

Dui, femur.

Dui, den dui, nigerrimus, a, um.

Dui, tela ex serico rudi.

Dum, hat dum, cantus amatorii gentilium, pariter prohibiti Christianis ac lusus du.

Dun, cumulus palearum vel spicarum. Dun lam, grana- rium.

Dun day, vide day, pellere.

Dung dung, sonitus tormentorum.

Duo, cai dua da, finis. Opponitur dau, caput, initium. 31
Duoi, fugare et fundere; persequi hostem fugitivum, praedam. Duoi di, expellere.

Dut, intromittere aliquid in foramen. An dut, manducare oryzam per alium in os intromissam, more infanti um vel infirmorum. An dut, etiam intelligentur de judicibus qui, pecunià corrupti, sententiam perversam contra justitiam ferunt.

Dua, tradere, comitari.

Dua, hoc nomine appellantur pueri, puellæ aut homines infimæ conditionis, aut per contemptum, sicut nomen thang; sed thang pro masculino genere solum, dua verò pro utroque.

Dua, comitari in egressu; opponitur ruoc, quod est recipere in egressu.

Dua cho, corrigere.

Duc, virtus, probitas. Hoc nomine appellantur omnes virtutes, sive naturales sive supernaturales; ut duc tin, fides. Duc cau bang, justitia. Sed sæpissim inventur juneta ista vox duc cum voce nhan, ut con phai di dang cai nhan duc, fili debes ingredi viam virtutum. Quando verò præcedit ista nomina Dominus, Rex, &c.; tunc non potest aliter explicari quam adjec titum excellentissimus, a, um; ut D. C. B.,* Excellentissimus Dominus coeli; Duc nua, excellentissimus rex; Duc vitvo, excellentissimus episcopus; Duc ba, excellentissima domina, id est regina. Duc hanh, pietas.

Duc, hoc voce nominatur omne genus masculinum in anim alibus, exceptis gallis gallinaceis, qui semper appellantur ga sou. Vide cai.

Dung, stare. Dung lai, sistere gradum.

Dung, continere. Istud verbum convenit vasis minoribus, ut, Bat dung di gi, scutella quid continet?

Dung, noli, nolite. Est in imperativo sollemn modo.

* Hæ litteræ sonant Duc Chua Bloi.
Duoc, posse, invenire, assequi. Chang duoc, non posse, non invenire. Ad rectè utendum istis vocibus chang duoc, in linguā annamiticā, magnā opust est attentione, et non nisi per longum tempus; et in hunc scopulum incidere solent hujus linguæ tyriones. Itaque quando quis ex propriā sua impotentia aliquid facere non potest, istae voces non potest semper debent postponi alteri verbo, ut, an chang duoc, id est morbo impeditus manducare non potest. Di chang duoc, ire non potest ex infirmitate vel alīa causā. Quando verō alīquā lege vel mandato impeditus agere non potest, seu non valet, tunc chang duoc, debet præcedere illud verbum; ut, Ngay le chang duoc lam viec xai toi an thit chang duoc; id est ex infirmitate non possum manducare carnem. Toi chang di an thit, id est, prohibitus alīquā lege manducare carnem non possum. 

Duom nhuan, tempus suaviter temperatum. Mua duom nhuan, pluvia verna. Duom nom, ululatus.

E.

E, duom e, vili vendere.
Ech, cai ech, rana.
Em, suavis, e; suaviter. Em ai, idem. Em so, revereri.
Em, frater minor et soror minor.
En, chim en, hirundo.
Ep, cogere, premere. Ep xuo, deprimi.
E chan vel te chan, tepescit pes. Dau e om, lentus dolor.

G.

Ga, gallina et gallus gallinaceus. Nguoi toi ga, homo luscus.
Ga, tradere filiam nuptui. Bon dao chang nen ga con cho ke khau dao, non licet Christianis filias suas tradere nuptui gentilium.
GAC, cornua cervorum.
GAC, cay gac, quaedam arbor cujus fructu tingitur oryza ut pulchra appareat.
GAI duo, cultrum leviter ad cotem fricare.
GAI, con gai, filia puella. Sed quando per contemptum nominantur mulieres, tunc per unicam vocem gai. Chang nen danh ghen vuoi gai dai lam chi, non decet virum rixari cum mulierculis.
GAI, fricare.
GAY, occiput. Ga gay, gallus cantat.
GAY dan, tangere instrumenta musicæ. Gay no ra, proscribatur ille.
GAY, baculus.
GAY, macer, cra, erum. Gay dung ra, exordiri. Gay dung cho con cai, necessaria suppeditare filiis ad familiam instituendum.
GAY, lignum aut tabula contracta in duas partes. Daunh gay, frangere.
GAM, sericum. Ao gam di dem, musica in luctu.
GAM thet, rugitus leonis aut tigridis. Bien gam, fremitus maris.
GAM, meditari, considerari.
GAN, jecur. Ca gan, magnanimus.
GAN, colare aquam, vas in unam partem inclinando. Hoi gan, diù sciscitando quaerere.
GAN bo, enixe commendare; pice conglutinare. Gan, neuronus. Gan, propæ.
Gang, mensura quæ duanti æquivalat. Gang, est etiam genus ferri fragilis et crudi.

Gang, noi gang, verbis repetitis in memoriam reficare.

Gang, conari. Gang sue ra, exercere vires.

Ganh, solus per vectem aliquid portare. Si cum aliquo per vectem ferre, dicitur khieng. Solus humere sine vecte gerere aliquid, dicitur vac, ut D. C. J. vac cu rut, Christus bajulans crucem. Portare aliquid humero aut collo appensum, dicitur mang; manu gestare, dicitur xech.

Ganh nhau, dissentire invicem.

Ganh, gang nhui, dorsum montis.

Gao, oryza cruda.

Gap, occurrere. Gap nhau giua dong, occurrere invicem in vià.

Gap, aliquid capere per bacillos. Gap lua bo tay, calumniari.

Gap vel xep, complicare vestem. Gap phi nhieu su, multis malis exagitatus.

Gat ra, manu repellere. Cai gat di, aliorum sententiam contendeando repellere.

Gat gao, asperrimus, a, um.

Gat dau, annuere. Ngu gat, dormiturire.

Gau, con gau, ursus. Co gau, herba quaedam cujus radix est medicinalis. Chiendent agrestis.

Gau, situla seu instrumentum ad hauriendam aquam.

Gen, rau gen, blitum.

Gen giau vel cot geu, ineptē jocari.

Ghem, rau ghem, olera cruda, quæ cum jusculo comeduntur.

Ghe, ghe rang, horrent dentes.

Ghe, cathedra, sedile. Ge thay, terribile.

Ge, pannus vetus. Tam ge, frustum panni veteris.

Gie, scopa.
Giau mat, oculus lippitudo obductus.

Ghe ga, crista galli. Ghe su la, multa admiranda.

Ghen, invidia. Ghen ghet, invidia et o dium. Ma qui hang ghen ghet loai nguoi ta ch co khi dung, daemon im-placabili odio prosequitur genus humanum.

Minh, clarus, a, um. Dai minh, ultima imperatorum sinentium familia, sic dicta; aqua etiam idem nomen accepit totum Sinarum Imperium. Nunc verò regnat Tartara familia, cujus quartus imperator nomine Can Lao, actualiter præsident, mutato vocabulo dai minh magna claritas, in dai tanh, magna seremtas.
Minh, corpus. Mot minh, solus, a, um. Minh est adjectivum suus, a, um. Con, muon di dang uhan duc cho blon, thi tri het ph ham nih con cung bat no theo y D. C. B. dung theo y xac thit, vis perfectus esse in vià virtutum,
antè omnia debes mortificare corpus tuum, et cogere illud sequi divinam voluntatem, non naturam corruptam. Chang nen cai y Be tren, ma theo y rieng minh, bao gio sot, nunquam licet spretà voluntate superioris, sequi proprium suum libitum. Phai yeu ng ta nhu bang minh vay, oportet amare proximum sicut se ipsum.

Minh tinh, domus papyracea inqua inscríbitur nomen delecti.

Mit, mu mit, obscurissimus, a, um.

Mit, cay mit, arbor quam Lusitani jacam vocant.

Mia, mia mio, errare. Tinh xac thit yeu daoi hay mla mlo, caro fragilis, defectis obnoxia.

Mle, ratio. Chang co mle nao, nulla est ratio. Ph mle, consonum rationes. Vi bang co chang muon chua toi thi chang co mle nao cho con duoc roi than dau, nisi emendaveris vitam tuam, nulla ratione salutem consequeris tuam. Ta o khien nhuong thi ph mle moi dang vi ta la ke co toi, est conforme rationi omnino ut humiliemur, quia peccatores sumus.

Mloi, verbum; sermo. Mloi noï ph hop vuièc lam, verba debent consonare actioni. Vang mloi, obedire. Su vang mloi chiu luy th dép lao chà ca hon ça le, obedientia plus placet Deo, quam sacrificium. Toi xin cuop mloi, nguoi, bonă tuà venià loquar, domine.

Mo, cortex quo arbores arecarum coopertiuntur; et quo leviter extenuato utuntur ad res quaslibet papyri loco involvendas. Chet bo mo, bo chieu, morere, infelicissime. Maledictio.

Mo, leviter contrectare. Co y trai ma so mo ng ta thi co toi, ex malà intentione alios contrectare, peccatum est.

Mo, contrectando quaerere aliquid in aquis latens. Noi mo, loquì per conjecturam.

Mo, crepitaculum ex ligno, quo vocantur ad negotia publica.
Go mo, pulsatur signum. Rao mo, publicare. Danh mo chang bang go thot, citiûs vocantur sonitu mensæ quam crepitaculi.
Mo, cumulus terræ elevatus ut defendat aliquid à diluvio.
In Xung he, di mo, quô ire.
Mo, desiderare. Ai mo, amare cum veneratione.
Mo ma, sepulchrum. Tin di li cat mo cat ma, ex vanà observantiâ transferre ossa mortuorum in varia sepulchra. Thay dia ly lay ngoi ma, nefarii Tunkinenses geographi quærunt terram ad sepulchrum.
Mo, extentare. Chem mo do di, sermo gentilium, id est, mala abeant. Ga mo, gallus suo rostro pulsat.
Mo, quispiam. Ten la mo, nomen est. Lo mo, sine ordine, indiscretæ.
Mo, somniando loqui. Noi mo noi mo, loqui per somnium vel quasi somnians.
Mo, uxor avunculi mei; respectu mei debeo vocare mo.
Mo, pugillus; vel numerus decem millia.
Mo, mo mo, subobscurus, a, um.
Mo, aperire, explicare. Mo dao, propagare religionem.
Mo cua ra, aperire januam.
Mo, butyrum; adeps, pinguedo.
Moc, germinare. Mat bloi moc, sol oritur.
Moc, mucus; mucidus, a, um. Moc ra, mucescere. Banh da moc, thi chang nen dung ma lam le, hostià mucídà non licet uti in sacrificio.
Mor, pisciculi minutissimi in mari.
Mor, omnis, e. Moi nguoi moi co, omnibus, singulis diebus est. Moi ng moi phai giu minh cho khoi chuoc ma qui,
quisque debet cavere se ab insidiis diaboli. Ro moi, inurbanus.
Moi, piscis quidam.
Moi, ex labore fatigatus. Moi met, idem.
Moi, labium. Cai moi, cochleare culinarium. Con moi, explorator; vel statua venefica ex palea.
Moi mot, unusquisque, unaquaque, unumquodque. Moi mot nguoi co mot linh hon ma thoi, unicuique inest unica anima.
Moi, novus, a, um; recenter; tandem. Sam truyen moi, testamentum novum. Con co an nan toi that moi duoc khoi toi, per solam contritionem veram remittuntur tibi peccata. Moi lam, recenter incipere facere.
Moi, invitare. D. C. B. moi ng ta vao nuoc thien dang: sao le co it nguoi nghe, Deus invitat omnes ad regnum cælorum; sed pauci audiunt ejus verba. Moi ou ba ou vai moi gio moi chap, invitare progenitores mortuos ad convivia parentalia. Moi thay phu thuy chua chung, vocare magos ut per sua veneficia sanent.
Mom mem, edentulus.
Mom, os animalium. Mom cho, os canis.
Mom, cibum præmansum infanti instillare. Ba nan bu mom
muoi thang cuu mang, Tribus annis nutrire et lactare; et decem mensibus gestare in utero infantem. Sic pradica
catur labor matrum.

Mon, parvus, a, um. Hen mon, abjectus, a, um. Toi mon, peccatum leve. Vo mon, concubina.

Mon, pars separata ab alterà. Phai chia ra tung mon, oportet segregatim ponere partem separatam ab alterà.

Mon, quod atteritur vetustate. Moi su cang lau thi cang mon nat; sao le net xau thi cang lau thi cang vung cang ben, omnia atteruntur vetustate, sed vitia vetustate fir-
mantur.

Mon, demulcere animalia.

Mon, mon nuoc, vestigium aque.

Mot, mot ya, mot dai, urger necessitas corporalis. An may an mot, mendicare, vel colligere spicas post messem.

Mot, vermiculi qui ligna corrodunt.

Mot, unus, a, um; solus, a, um. Co mot D. C. B. ma thoï, est unus Deus solammodo. An mot minh mot mam, manducare solus in unà mensi. Lam mot, unà, simul.

Ke chiu minh thanh D. C. J. cho nen, thi di hop lam mot, qui ritè communicat, efficitur unus cum Christo. Di lam mot, simul ire.

Mot, unus, a, um; ut, Hai muoi mot, viginti unus.

Mou, mou tron, nates.

Mou, mou tren bloi, signum in cælo. Mou tre, arundo pul-
lulans. Chet cut mou, mori sine filio.

Mou, sic vocantur apud Anamitas omnes dies mensis lunarii. 1° Usque diem decimum inclusivè; qui dies decimus vocatur mou muoi; et tunc incipit nominari dies undecimus, ngay mou mot, usque diem decimum quintum; qui semper
vocatur ram vel ngay ram. Post illum dies decimus sextus iterum vocatur ordinario numero ngay muoi sau, usque diem trigesimum, qui dicitur anamitice ngay ba muoi, si mensis habet triginta dies; et mensis triginta dierum vocatur thang no. Si mensis habeat viginti novem dies, ultimas erit vigesimus nonus ngay hai chin; et mensis vocatur thang thien, mensis defectuosus.

Mu, conchilium, tegumen. Mu ba ba, tegumen testudinis.

Mu, mulier. Dom ba mu, sacrificare deæ partús. Ba mu, apud sorores religiosas, vocatur superiorissa.

Mu, cai lu mu, species sinapis.

Mu, obscurus, a, um; obscurari. Mu bloi, cœlum obnubilatum.

Mu, pileus, biretum. Mu trieu thien, corona. Doi mu, gestare biretum. Cat mu, tollere biretum ex capite.

Mu, pus.

Mua, emere. Mua lao ng ta, captare benevolentiam hominum.

Mua, saltare, gesticulare; choreas ducere.

Muc, aliquid liquidum cochleari exhaurire. Muc nuoc, haurire aquam.

Mui, tectum cymbarum aut navicularum.

Mui vel mun, reliquiræ mensæ. Co mui, mensa instructa ex reliquis.
Mui, particulce quas in se continent fructus.
Mui, color; odor; sapor. Mui do, color rubeus. Mui thom, odor suaveolens. Mui thoi, odor graveolens.
Mui ngon ngot, odor sapidus, dulcis. Rau mui, coriandrum. Chang co mui gi, nullius valoris est.
Mui mun muc, lignum putrefactum.
Mui, nasus, vel mucus e naribus stillans. Lo mui, nares.
Mui dao, aciem acuere cultri.
Mun, go mun, ebenum.
Mun, frustulum, mica, modicum quid. Mun mat, verruncula in facie.
Mung, gaudium.
Muoi noi, fuligo ollæ adhærens. Me muoi, ignarus, a, um.
Muoi, sal; salire. Ca chang an muoi thi ra thoi, piscis sine sale putrescit; sic et homo sine correctione. Muoi, culex.
Muon, decem millia.
Muon, tardè, serò. Muon tuyet, tarda tempestas.
Muon, velle; cupere.
Mut, surgere; exsurgere.
Mut cai vel vou cai, surculus sinapis.
Mua, pluvia. D. C. B. lam mua xuo cho ke lahn va ke du cung bang nhau, Deus pluit super justos et injustos æqualiter. Mua phun vel mua lui, pluvia tenuissima instar pulveris.
Mua, vomere. Lom mua, provocatur stomachus ad vomitum.
Mua he, noli. Rarissimè est in usu.
Muoi, decem. Sed ad viginti usque nonaginta dicitur hai muoi, ba muoi, &c.
Muon, cai muom, cochlear. Moc muom, arbor quaedam, Lusitanicè manga.

Muon, conducere operarios. Lam thue, lam muon, operam locare. Ke lam thue, operarius.

Muo, rau muo, herba quaedam.

Muong, Quan muong, homines montani quorum lingua ad Siamicam linguam accedit.

Muong sanh, testa.

Muop, species cucurbitæ.

Muor, madefieri sudore.

Muo, cay muo, papaver.

Na, trau na, bubala catulos habens. Con na, ca nuoc, filius matrem, piscis aquam quaerit.

Na, sæpiùs. Na, balista.

Nac, ca nac, pisciculus quidam.

Nao, thi nac, caro sine pinguedine. Nac in provincià Xung he, dicitur aqua.

Nagh, axilla.

Nac no, singultire.

Nai, con nai, cervus major.

Nai, pannus ex serico rudi.

Nai chwui, pars rami ficūs Indīcē. Tre nai, vāldē pīger.
Nay, ngay hom nay, hodiē. Dem nay, hāc noete. Xua
nay, ab initio usque nunc. Man nay, hoc anno.
Nay, ay nay tao lao, sollicitus, a, um.
Nay, hic, hāc, hoc; et semper debet postposi substantivo,
ut ou nay, iste dominus. Vīec nay, negotium hoc. Si
præcedit substantivam, fit particula ecce, en; ut D. C. J.
phan rang; nay tao, quan Judeu lien nga ra het, Jesus
respondens ait: ecce Ego sum, abierunt Judei retrorsūm.
Nay lay nguoi ay, ecce homo.
Nay, cadere; excidere. Nay muc tau, imprimere amussim
ligno. Nay muc cam can, dicitur de judicibus, qui de-
bent omnia ad trutinan et amussim examinare.
Nay, khi nay, modo antē, vel paulō antē. Su chung bay da
tha khi nay, thi cho noi cu ai cho den khi tao sou lai,
visionem quam vidistis modō, nemini dixeritis, donec à
mortuis resurgam.
Ney lon, abdomen porci.
Nay, ai nay, quispiam vel ipse, ipsa, ipsum. Ai giu dao nen;
di roi linh hon nay, quis perfectē fidem custodierit, conse-
quetur ipse saluten suam. Ai co, nay an, qui habet vic-
tum, ipse edat.
Nay bun, locus plenus luto.
Nam, vir. Nam nu, vir et mulier. Anh em bon dao nam
nu thay thay, O Christiani fratres et sorores omnes.
Phuong nam, vel ben nam, plaga australis. Gio nam,
Nam, annus. Nam nay, iste annus. Nam ngoai, anno
præterito. Nam kia, annus plusquam perfectus. Nam
truoc, anni præteriti. Sang nam, annus futurus. May
nam, quot anni. Sed annus eōtātis in homine dicitur tuoi;
undē si rogetur quis, quot annos eōtātis seu vitae sae habe-
ret, dicendum est: co may tuoī. Postremō nam est etiam
numerus quinque. Sic quindeque anni dicitur nam nam;
sed quindécim dicitur muoi lam; et à viginti usque ad
nonaginta, quinque dicitur lam, ut muoi lam, quindecim; hai muoi lam, viginti quinque, &c.

Nam, fungus, i.

Nam ruou, vas testaceum ad continendum vinum.

Nam, virgula elaborata ad texendum.

Nam, meticulosus, a, um.

Nam, herba cujus radix amarissima est. An nan toi, penteire de peccato. An nan chang kip, sera penitentia.

Nam, premendo exprimere. Bop nan kiem an nguoi ta, dicitur de iis qui pauperum sanguinem sugunt.

Nam, digitis contractando et palpando ad scrutandum quid intùs lateat. Nang nan, vel Nang no, sedulus, diligens.

Nang, ha nang, morbus qui virile membrum relaxat.

Nang, furca.

Nang, femina. Nang hau, ancilla vel concubina mandarinorum.

Nang, sapè. Sieng nang, sedulus. Ta phai lam toi D. C. B. cho tieng nang, debemus esse diligentes in servitio Dei.

Nanh, dentes animalium. Ke nanh vuot trao lang, qui est robustus in pago.

* Abbreviatio pro nguoi.
NANH, ti nanh nhau, ex pigrition laborem et difficultatem à se rejicere, et in alios derivare conari.
NANH, dau nanh, species faseoli vel ciceris.
Nao, ph nao chang, quid impedit. Ne chang ph nao, nihil refert, vel nihil impedit.
Nao, quis, quæ, quod. Vide ai. Muon lam the nao, thi lam the ay, quoquo modo velit, sic facit. Nao ai lam di gi cho may, quid tibi fecit? Nao cu o dau, ubi est pater?

Ngam, aliquid in aquà latet immersum. Cung co ngam, protervus, sed non apertà fronte; latens superbia.

Ngam nga, identidem laudare.

Ngam, dang ngam ngam, valdè amarus, a, um.

Ngan, brevis. Van, idem est.
NGAN, modularii.
NGAN ngo, stolidus morosus.
NGANG, be ngang, latitudo; linea transversa, vide doc. Lam ngang ngua, aliorum consilio centraire vel obicem ponere. Cai ngang ra, aliorum sententiae contradictere.
NGANG lai, cohibere obstaculo.
NGANG nghiu, arbor gibbosa. Dat xau tron cay ngang nghiu: he nguoi tho tuc noi deu pham phu, sicut mala terra procreat arbores gibbosas, sic rusticus semper rustica verba profert.
NGANG, that ngang, sic dicitur omne genus quod habet mediam partem constrictam. Ca nganh ngang, quidam piscis spinosus. Nguoi nganh hoa, homo dolosus.
NGANH vel canh, vide canh.
NGANH mat di, avertere faciem. Nghan mat lai, faciem convertere.
NGAO du, otiosus; felix. Cho ngao, canis enormis.
NGAO, kieu ngao, superbus, a, um. Toi kieu ngao, superbia. Ca ngao, quidam piscis.
NGAO, balbutire. Nguoi noi ngao, homo balbus.
NGAO co ma xem, arrecto collo de longè intuere.
NGAO coi, axis mortariis.
NGAP, oscitare; fastidire.
NGUM ngap, di ngam ngap, ire per multam moram tardando.

NGAT, ngat keo, claviculus forficiis. Ngat mui, vide mui.

NGAT, thom ngat, suavis odor spargitur. Tieng don ngat het moi roi, fama suavis spargitur per omnia loca.

NGAT, intercipere lumen, obscurare.

NGAT, frangere aliquid. Cao ngat ngheo, insolitae altitudinis homo.

NGAU, mam ngau, piscis a longo tempore conditus sale jam benè detritus.

NGHE, animal simile leoni.

NGHE, crocus, i. Nghe, tingere aliquid croceo colore.

Kien nghe, formica flavi coloris. Xung he, provincia Tunkini proxima Cocosinae.

NGHE, ars, officium. Nghe nghiep, idem. Con lam nghe nghiep kiem an, quas exerces, fili, artes ad quærendum victum?

NGHE, quædam herba.

NGHE, audire. Nghe mloi, obedire; consentire. Con dung nghe chuoc ma qui, noli consentire tentationi daemonis.

Nghe thay, auribus percipere.

NGHE, con nghe, vitulus.

Nghe mieu, domus spiritui tutelari dicata. Ou nghe, vel tien si, doctor. Do ou nghe, vel do tien si, doctoratum adipisci.

Nghech dau, caput vesanum, insanum.

NGHEN, suffocari cibo faucem premente.

NGHEN, dan ba co thai nghen, mulier gravida.

Ngenh ngang, di nghenh ngang, incedere superbo fastu, magnâ pompâ.

Ngheo dang, via tortuosa.

NGHET, quod est valde constrictum. Lam nghet lam, rigide agere; arctè constringere.

NGHI, ho nghi, dubitare. Chang nen ho nghi su gi ve dao, non licet dubitare aliquid de fide. Uy nghi, terribilis majestas. Nghi hoac, dubius, a, um.

NGHI, quan bat nghi, truculenti, latrones.

NGHI, sumitur etiam pro ille homo, sed dicendum est solùmodo de infimo homine.

NGHI, putare, cogitare. Ta nghi the nao, quomodo cogitamus, quid facto opus est? Quando est sermo de consilio capiendo, quid fertis sententiae; quidnam consilii capitis?

NGHien, atramentarium annamiticum.

NGhien rang, stridere dentibus. Gian nghien ngam, irasci tacitus; ira intus latens.

NGHIEM, nhiem nghi, nhiem trang, magna majestas.

NGHIEM quan, nhiem khi giai, exercitum instruere; arma comparare.

NGHIEng, latus anteponere. Lam nghieng lech, quod erat bene situm pervertere. Nam nghieng, decumbere super latere.
NGHIEP, ac nghiep, vide ac.
NGHIEP, nghe nghiep, vide nghe. Toi nghiep, delictum.
Cou nghiep, meritum. That nghiep, mendicus.
NGHIN, mille. Dou nghin nghit, numerus hominum con-
fertus.
NGHINNH, ngung nghinhh, leviter aversari.
Ngo, gio ngo, hora duodecimam et primam pomeridianam
complectens. Ngo duoc, fortè posse.
ngo xem, arrigere collum ad videndum.
Ngo, apertus, a, um; patens. De ngo cu, relinquere por-
tam apertam. Ngo mloi, declarare suum intentum.
Ngo, fores extiores. Ngo ngang, homo capax. Hien
go, sapiens, prudens.
Ngo, regnum sinarum. Thang ngo, sinensis, (per contemp-
tum.) Urbaniter dicitur chu kach.
Ngo, furiosus, amens. Cho ngo, canis rabiosus. Giac ngo,
hostes irrupunt.
Ngo, surculus nimphae.
Ngo ngan, insanus, stolidus.
Ngo, existimare, putare. Chang nen ngo su trai cho ng
a vo co, non licet malè suspicari de proximo absque fun-
damento. Ngò la, idem est ac ngo la, puto quod. Con,
go su nay la toi nhe ru, putas hoc esse leve peccatum?
Ngoa, hyperbole. Noi ngoa, loqui per hyperbolem. Dan
ba ngoa nguya, mulier linguosa.
Ngoac di, vide ngoai.
Ngoai, extra. Ho ngoai, familia matris. Anh em ben
ngoai, consanguinei ex parte matris. Ke ngoai dao,
extra fidem, id est infidelis. Ngoai kinh, ngoai thu, extra
libros, seu traditio incerta.
Ngoai, nam ngoai, annus immediatè præcedens. Ngac
ngoai y, ultimos spiritus ducere.
Ngoay, ngoay vao, ferro acuto fortiter perforare.
Ngoay, cho ngoay duoai, canis caudà suà adblàndiens.
Ngoai, extra. Be ngoai, extùs. Chang nen lay mot su be
ngoai khou ma tho phuong D. C. B. pha co viec be trao lam mot, non expedit colere Deum solis operibus exterioribus, sed comitari debent opera interna. Ngoai opponit tur trao, intus.

Ngoap, ranuncula.

Ngoat tri, tro lai, illicò revertì.

Niec, gemma.

Ngoc dau len, erigere caput, dicitur de piscibus.

Ngoi, innatare undis, dicitur de serpentibus aut avibus quo fluitant super aquà. Ca ngoi, supernatat piscis.

Ngoi, tegulae. Nha ngoi, domus tecta tegulis.

Ngoi, con ngoi, rivus. Ngoi but, acumen penicilli. Gi et ng ta bang ngoi but, dicitur de iis qui suis scriptis alteri nocumentum afferunt.

Ngoi, sperare aliquid ab aliquo: sed non dicitur nisi per contemptum. Tao chang ngoi may dau, quid à te spero?

Ngoi, sedere. Ngoi xep bang, sedere decubitis cruribus, qui modus apud eos honestus est. Ngoi dung cung nhau, dicitur de cohabitatione viri et mulieris.

Ngoi, vide nghi. Dai ngoi, expectare à rege responsum.

Ngom, stultus, vecors; qui non est dignus vocari homo.

Ngon, sapidus. Mui ngon, sapor. Ngon lanh, sapidus et salubris.

Ngon cai, pollex. Ngon tro, index. Ngon ut, digitus ultimus. La ngon, folium quoddam venenatum.

Ngop, trou ngop len, suspicere tantisper.

Ngot xua, detumere, decrescere. Com an da ngot, oryza sumpta jam digesta est.

Ngot nang, peruri calore solis.

Ngot mua, pluvia sese paulisper remittens.

Ngou, anser. Thang xac ngou, loquacculus nebulo.

Ngou cu, vide cu. Ngu tam mot it cau, hospitari per breve tempus.

Ngou, dormire. Ngu gat, vide buon ngu, gravari somno.

Nua ngu, nua nuc, semisomnus.

Ngou, quinque. Ngu sac, quinque colores, scilicet: Do, ruber; Den, niger; Vang, flavus; Trang, albus; Xanh, viridis. Ngu quan, quinque sensus corporales, scilicet: Con mat xem, visus; Tai nghe, auditus; Mui ngu, olfactus; Mieng noi, locutio; Chan tay lam, tactus. Ngu tang, quinque interiora hominis, scilicet: Tam, cor; Can, jecur; Ti, ventriculus; Phe, pulmo. Than tem, cai ngu, mensura quinque cubitorum.

Ngua, equus.

Ngua, prurire. Ngua mieng, pruriens os, id est, loquax.

Ngua, supinus, a, um. Ngu mat len, sursùm faciem erigere. Ngu tay mat ra, dextræ palmam extendere.

Nguc, carcer. Dia nguc, infernus.

Nguc, pentus.

Ngui ngu, commotus misericordiâ, vel desiderio alicujus. Ngui, olfacere; odorari.

Nguy, rebellis. Lam nguy, conjuratio facta.

Nguyen, nguyen lam sao? quâ ex causâ? Nguyen boi, ex.

Nguyen, the nguyen, vovere; jurare. Nguyen rúa, malè precari.

Nha ra vel lao ra, liquefieri vel dissolvi.
Nhaec, campanula: collo equi aut canis appensa. Le nhac, 
ceremonia, urbanitas civilis.
Nhaec nhuoi, segnis, vecors.
Nhaec, attollere aliquid. Nhac can, appendere aliquid state-
teræ. Nhac di nhac lai, aliquid in memoriam iterum 
iterumque reficicare.
Nhaec, nhoc nhac, movere se; qui incipit se movere; resist-
tere alicui.
Nhai, mandere.
Nhai, sibilando contemnere; contemptim verba aliorum 
repetere.
Nhai, ranulæ in arbustis frequentes.
Nhai, hoa nhai, flos quidam albi coloris valde suavis. Nhai 
quat, claviculus quo compingitur flabellum.
Nhay, quod celerrimè concipit ignem.
Nhay, connivere. Mot nhay mat, inictu oculi. Nhay 
nhau, sibi invicem signum facere connivendo.
Nhay, saltare. Nhay khoi vao, evadere laqueum.
Nham, goi nham, acetarium ex olere et pisce confusis.
Nham, nham nhuoi, quod fit cum magnà confusione. An da 
nham, fastidium cibi.
Nham, ca nham, mustela marina.
Nham, asper, a, um; quod pellem sæviter pungit. Ao nham 
minh, ciliicum.
Nham ruou, temperare vinum. Do nham ruou, esculen-
tum quod vini vim temperat. Nham con mat lai, clau-
dere oculos.
Nham, collimare. Nham, meliùs mlam, errare, decipi.
Nham, præsidere.
Nhan, avicula quadam.
Nhan ha, otium. Thanh nhan, beatitudo.
Nhan, arbor quædam. Nhan hon, ob oculos.
Nhan, vel nhan no, rugæ. Nhan mat lai, rugare frontem.
Cho nhan nanh, canis rugens.
NHAN, denunciare. Nhan tin, mittere nuntium. 
Nhan, annulus. Tu ay nhan nay, ab illo tempore usque modè. 
Nhang, mot nhang, in ictu oculi. 
Nhang, lang nhang, vide lang. 
Nhang, cai nhang, muscae magnae. 
Nhang, quan nhang, homines sylvestres. 
Nhao, irridere; illudere. 
Nhao, rotare vel volvere se. 
Nhao, com nhao, oryza multâ aquâ cocta. 
Nhao, ordo, gradus. 
Nhap, intrare. Qui nhap vao no, diabolus intravit in illum. 
Nhap con mat, leviter oculus claudere. Thuc nhap, vigilare et interdùm leviter dormire. 
Nhat, melius mlat, insulsus, a, um. Ruou nhat, vinum debile. Cuoi nhat, ridere sine sale. 
Nhat vel dat, timidus, a, um; formidolosus; vecors. Mot nhat vel mot blai, unum momentum, vel unus ictus in amputando. 
Nhau, invicem. Cung nhau, simul cum. Ta phai cau nguyen cho nhau, debemus orare pro invicem. 
Nie, levis, c. 
Nhe vel mle, vide mle. 
Nhech, anguilla cujus caro est valdè sapida. 
Nhet lo, obdurare rimas.
NHEO, ca nheo, piscis quidam. Nheo nhoc, orphani.

NHICH, nhuc nhich, lentè movere.

NHIEM, sau nhiem, idem est ac mau nhiem, vide mau.

NHIEI, calor. Lam nhiet lam, angustiare.

NHIEU, multus, a, um; multèm.

NHieu cho, eximere aliquem ab oneribus publicis. Nhieu sinh, vitam servare. Ou nhieu no, à publicis oneribus liber vel exemptus.

NHIM, cui nhim, histrix.

NHIN, tolerare. Nhin nuc, tolerantia.

NHIN, idem est ac nhan, recognoscere; contemplari.

NHiu, noi nhiu, error in loquendo ex inadvertentia.

NHO, macula ex cinere vel fuligine aut atramento contracta. Da nho mat, sub obscurà luce.

NHO, parvus. Thang nho nho, puer parvulus. Nho xuo, distillare.

NHO, tollere aliquid humo infixum. Nho co, eradicare herbas.

Nhoc, elevare.

Nhoi vel mloi, vide mloi.

Nhom nham, an noi nhom nham, proferre rustica verba; sine ordine et sensu effundere verba.

Nhon, quod in mucronem desinit.
Nhon, di nhon chan len, incedere suspenso pede. Nhon tay cat lay, capere aliquid extremis digitis.

Nhot, arbor quaedam cujus fructus valde acidus est.

Nhot, furunculus. Nhot moc len, furunculi orientur.

Nhot vel dot, vide dot.

Nhot, pallescere; pallidum fieri vel lividum.

Nhop nhua, sordidus, a, um; impurus.

Nhao bao, commoverere.

Nhuto, thus. Nhua, pix.

Nhu, sicut. Cung nhu, sicut et similis; similiter; ita. Nhu vay, ita, sic.

Nhu, quod bene percoctum est. Danh du no nhu ra, verberibus contusus, a, um.

Nhu, extrahere illecebris. Nhu ga, escâ allicere gallinam.

Nhuc, nhin nuc, vide nhin.

Nhuc nhich, vide nhich.

Nhuc, mu nhuc, vide mu.

Nhuc dau, dolor capitis; dolere capite. Nhuc ca va mh, dolor per totum corpus.

Nhui, mui nhui, fomes, igniarium.

Nhuy hoc, pulchritudo florum. Nhuy tieng, suavitas vocis.

Hing ng noi co nhuy hang, verba suavia.

Nhuang, nam nhuan, annus lunaris tredecim mensium.

Thang nhuan, mensis additus vel duplicatus, intercalaris.

Nhum, mot nhum, unus captus digitorum.

Nhung cho, eximere ab onere publico, sicut verbum nchieu.

O nhung, otiosus, a, um. Nhung ma, sed, verûm.

Nhung, omnes. Chang nhung la, non solûm. Nhung phai su kho lien, semper incidere in calamitates.

Nhuc nha, vide nha.

Nhuc, da nhuc, valde debilitatus. Nhuc bang, quod si verò.

Nhuum, tingere aliquo colore. Tho nhuom, tinctores vestium.
Nhuo sao doi so, vana observantia et superstitio, quà gentiles credunt se posse sortem sen fatum commutare.

Nhur, dao nhut, culter obtusus, cujus ferrum hebescit. Nhut tri, obtusum ingenium; truncus.

Niem phat, precari idolum; recitare preces in honorem idoli.

Nieng, vermis in aquis natus.

Ninh than, aulicus; adulator.

Nieu, olla parva. Nieu huo, olla parva in quà crematur odoramentum.

Nin di vel nin lang, silere, tacere, reticere, premere vocem.

Nip, cai nip, corbula ad continendum vestes.

Nrr, con nit, puer; puella.

Nir, ao vit, vestis stricta. Nit sang, constringere loculum mortui.

Niu, nang niu, molliter tractare.

Niu lay, fortiter apprehendere; stringere.

No, saturatus, a, um. Fastidium cibi vel alterius rei.

No, iste, a, ud; alter, a, um.

No, ille, a, ud. Ay no, ecce ille est.

No, balista; exsiccatus, a, um. Cui no, lignum aridum.

No, cuneus.

No nhau, æmulari invicem; certatim et turmatim aliquo occurrere vel confluere.

40
No, irasci. Nat no, vide nat.
No, crepare, disrumpi cum strepitu. No sung, crepitus tormentorum bellicorum. No tai ra, maledictio.
No, ay no no, ille homo, vel illud negotium.
No, debitum. Mac no, debitorem esse, debere. Doi noi, vide doi, mutuum repetere ab aliquo. Ke lam no lam, ære alieno oppressus.
No, germinare, pullulare. No mat, famam gloriamve acquirere.
No, non sustinere. Chang no mang mot deu nang, non sustinuit ut aliquod grave verbum excideret ex ore.
Noc nha, fastigium domûs. Ca noc, piscis quidam cujus jecur est venenosum.
Noc, venenum; aculeus animalium.
Noi, ho noi, familia patris. Quan noi, eunuchus.
Noi, jungere. Noi dao, succedere in ordine progenití.
Noi, olla.
Noi, emergere ex aquâ. Ganh noi, par ferendo oneri. Lam noi viec, optimè negotium peragere; cumulari divitiis.
Noi ay, eù usque. Chang den noi ay, non eò usque.
Noi, gallus ex genere pugnaci.
Noi, relaxare, remittere; recedere paululum.
Nom, chu nom, Litteræ Annamiticae, vel Sinico-Annamiticae, ad exprimendas vulgares voces, seu ad referenda Annamitica verba. Tieng nom, lingua vulgaris; verbum in lingua Annamiticâ.
Nom, acetarium.
Nom, aspicere.
Nom, instrumentum ex arundine contextum ad piscandum.
Non, immaturus, a, um; recens; quod ad perfectionem nondùm pervenit. Sinh non, abortus. Nui non, montes. Nuoc non, montes et aqua. Non not, idem.
Non, galerus.
Non chuoï, pars intima arboris Indicæ.
Non, cu non, contractando molestiam inferre. Non nao trao da, stomachum movere ad vomitum. Timidus, formidableus. Lam non nao, inquietare; facere ut hûc illûc cursitent perturbatim.
Not, finire aliquid. An not di y, finire comedendo.
Not bung lai, contrahere ventrem.
Nou, ardror calcis. Nou nan, protervus, a, um.
Nou, suffrēre sustentaculum.
Nu, calïx floris.
Nu, ñeeïna.
Nu, gia nua, senex decrepitus.
Nu, arundo indica.
Nu, mediûs, a, um.
Nu, amplius. Mot it nua, modicum magis. Doi mot it nua, expectare paulisper.
Nuc laï, torquere funem.
Nuc may, ligare aliquid vîmine. Nuc lao, inflammatus cor alicujus rei desiderio.
Nuc, calor magnum.
Nui, mons.
Nuoc, aqua, liquor; regnum.
Nuoc, nodus. Lam den nuoc, rigorosè agere.
Nung, coquere lateres, vel vasa testacea. Tho nung noi, figulus.
Nuoi, nutritre. Duong nuoi, idem est.
Nuong cay, sperare in aliquo, vel niti alicujus potentia divitiis.

Nuong, assare.

Nut, deglutere; absorbire.

Nut, nodus; obduramentum. Nut ao, globuli in veste.

Nut, disrumpi, hiscere, rimas agere.

O.

O, ca o, nomen piscis. Chim o, avis quaedam milvio major.

O ue, sordidus, a, um. Su o ue, res turpis.

O, ao o ra, vestis vetustate maculata.

O, nidus gallinæ. O ho, exclamatio magis adhibita in libris.

Heu! proh dolor!

O, eructare. O, manere; esse.

Oan, quod fit injustè alicui. Oan gia, hostis; inimicitia; infortunium.

Oan thu, ulcisci injuriam, vindicare.

Oan, edulium ex sola oryza factum, quod in primà quâque lunâ et plenilunio cujusque mensis, idolis offerri solet; quodque pro sancto cibo à gentilibus habetur.

Oai linh vel oai vao, idem est ac uy linh vel uy vao. Vide uy.

Oc, cerebrum. Dau oc, caput.

Oc, cochlea. Oc tu va, cochlea marina magna. Oc nhoi, cochlea parva.

Oc, eructare.

O, graviter olens. Do an da oi, cibarium jam graveolens.

Est etiam interjectio: Heu! eia! Hi oi, idem est.

O, genus pyry, quædam arbor Lusitanicè goava.

Oi oi, goi oi oi, vocare magnà et repetitâ voce, ve lcalmare.

Om, amplexi, amplexari. Om nang, veretrum.

Om dau, om yeu, ægrotare.

Om, nau om, percoquere aliquid ore olæ, abstracto et lento
igne. Dau om ca va minh, lentus dolor serpet per totum corpus.

On, gratia, beneficium. Ta on, gratias agere Deo. Gia on, agere gratias æqualibus vel inferioribus. Ta da chiu nhieu on D. C. B. xuo cho, multa recepimus beneficia à Deo concessa.

On dich vel khi dich, pestis.

Op, granum frumenti vel quid aliud macrum et vacuum.

Op ep, mollis, e; putrefactus, a, um.

Or, cay ot, pimentum.

Ou, avus; dominus. Ou ba, ou vai, progenitores. Duc ou, princeps.

Ou, internodium; tubus. Ou nhoi, tubiculus pulvere tormentario repletus, et bene obstructus, ad sonitum edendum, cum accensus fuerit. Ou to, pensum sericum.

P.

Pha vao, vel pha phach vao, commiscere. Noi giem pha, zizanias disseminare.

Pha vel pha phach, destruere, diruere, vastare. Pha thanh, vastare urbem. Danh chay pha, expugnare armis.

Phach, crepitaculum. Ho phach, crystalium.

Phai, decolorari, amittere colorem.

Phay, dao phay, culter ad secendas carnes aptus.

Phay, mot cai phay, unus ductus calami. Quat phe phay, ventilare leviter.

Pham, facere contra aliquem. Pham toi, committere peccatum. Pham deu ran, violare præceptum. Noi pham den D. C. B., blaspheamare in Deum. Pham su thanh, sacrilegum esse, violare sacra. Phai dau pham, vulnerari graviter.

Pham hen, ignobilis homuncio.

Pham, chuc pham, dignitas, ordo.

Phan, lang phan, annona, oryza.

Phan, vel phan day, eloqui, praæcipere. (Vox propria regi vel Deo.) Phan xct, judicare.

Phan, tabulatum in modum lecti. Lam phan cung ai, agere adversum aliquem. Phai phuc, fallax, maliciosus, dolosus.

Phan nan, penitere.

Phan, finus, i. Phan chia, dividere.

Phan, fucus; cerussa. Gioi phan, fucare faciem.

Phan, excrementum.

Phan, operimentum olæ magnæ.

Phang, culter magnus.

Phang, cai phang, tela serica.

Phang, complanatus, a, um. Lam cho phang, complanare.

Bang phang trao lao, animo quieto.

Phao, lignum supernatans in sagenis.

Phao, igniculus pyræus sonum edens.

Phao vel phung, tat phao vel benh phao, lepra. Nguoi co tat phung, leprosus.

Phao, phao vo ra, repudiare uxorem. To phao, libellus repudii.

Phao, cubiculum; thorius. Viec cam phao, exercitia spiritualia recollectionis. Benh pham phao, morbus ex intemperantiæ rei venereæ.
Phao, opinari, conjectare. Phao len, inflari ex vento. Phao minh, providere sibi in futurum.

Phat pho, vento agitari.

Phau bay, exponere. Trang phau phau, candor niveus.

Phe, aliqua pars in communitate pagi. Lang phe, idem. Phen le, æmulari.

Phen vel buc phe, cratis contexta.

Phen, alumen.

Pheo, tre pheo, arundo.

Phet ho, glutinare. Danh phe, lusus pueri.

Phet, percutere. Noi phe, loquax, jactabundus.

Phi cuæ, profusus, prodigus. a, um. Phi ton, idem.

Phi ra, emittere ventum.

Phi lao, satiare animum. Phi chi, phi da, idem sonant. Phi, est interjectio.

Phien cho, successio nundinarum. Phien thu, juxta succes-

* Sic in MS.
sionem. Phien len loa tren, appellare superiori judicem. Phien quan tren, idem.

*Phinh pho*, adulari.

*Pho sach*, volumen, vel auctor librorum. Ngua dinh pho, vide *dinh*.

RE, cista contexta ad sustinendam ollam.
RE, gener. Lam re, servire socero ad probandam generi indolem ante matrimonium; qui mos a missionariis improbatus est, propter multa mala. Anh em re, maritus sororis magnæ et parvæ.
RE, radix, truncus; initium, origo, vide coi. Tinh me xat thit lai coi re moï toi loi, cupiditas est origo omnium peccatorum.
RE, go re, quoddam lignum.
RE, gao re vel gao te, oryzæ ordinaria.
RE, sonus campanæ fractæ.
RE, quod vili pretio venditur vel emitur. Re quat, basis flabelli.
RE, separare, separatim. Phan re, idem.
REN, gemere.
REN, vectigal. Ista vox à voce Lusitanicâ, renda.
REN, cudere ferrum. Tho ren, ferrarius. Tap ren, exercere se ad aliquam rem.
Reo, ho reo, acclamare. Reo ro, idem.
Reo quanh, circumcidere.
REP, cimex.
RET, frigus. Run ret, frigore tremere. Ret, est etiam rubigo ferri.
RET, cai ret, centipes.
Rev, mucus in aquâ aut in terrâ humidâ. Ri cot ri, pythonissa.
Ri, ru ri vel ri ram, submissâ et lentâ voce loqui.
Ria, rau ria, vide rau. Ria quanh, in circitum aut margine cujuscumque rei.
Ria ba ba, margo testudinis.
Ria, chim ria lou, avis suas pennas vellicans.
Rieng, particularis, e; particulariter. Viec rieng, opus particulare. Viec rieng, intelligit etiam de salute cujusque propriâ. Con, phai lieu viec rieng con hon moi viec khac, debes ,fili, procurare salutem tuam antè omnia.
Y rieng minh, propria voluntas.
Rieng, species zinziberis majoris.
Rim, condire cibum lento igne et per longum tempus.
Riet, arctè constringere. Lam riet lam, rigorosè agere.
Rit, aliquid induratum rubigine.
Riu, cai riu vel cai rui, cratis contexta ad capiendos piscicullos.
Riu, cai riu, securis.
Ro, cista ad capiendum porcos.
Ro, bi ro, mantica ex sacco. Ro lay, surripere.
Ro, vel ro rang, clarus, a, um; claré. Noi khoan ro rang, loqui lentè et clarè.
Ro, ca ro, pisciculus quidam.
Ro, dou ro, dementatus.
Ro, cista ad lavandum pisces vel olera.
Ro, mat ro, facies variolis notata.
Ro moi vel man di, vide man, genus boum agreste.
Ro, appetitus inordinatus mulieris prægnantis. Chua ro, prægnans.
Roc, secare papyrum aut telam aut tabulam in duas tresve partes.
Roc, expolire quod est asperum.
Roc, cuva roc, cancer in agris natus.
Roc, ruo roc, ager aquosus.
Roi, virga. Roi vot, verbera.
Roi, multis nexibus implicare. Chi roi, filum implicatum.
Roi nhieu viec, implicatus multis negotiis. Ke roi dao, hæreticus.
Roi, vide doan. Sau khi ao da noi roi, postquam loquendi finem fecit.
Roi, quies post laborem; salus. Roi viec, cessant negotia; functus negotiis.
Roi, buon roi, mercatura piscium.
Roi ra, excidere. Roi xuo, cadere.
Roi, mat roi, refrigerium.
Roi, quod non est conjunctum. Roi roc, idem.
Rom, sau rom, vermis pilosus, foliis arborum inhærens, valdè venenatus; undè dicitur gan sau rom, id est malevolus.
Rom, vide ra.
Rom, ngua rom ca va minh, prurigo serpit per totum corpus.
Ron lai, aliquid jam ad paucitatem redactum.
Ron vel don, tumultus ex concursu multorum hominum.
Ron ra, idem.
42
Ron, umbilicus. Lam ron, vel lam gang, conari perducere opus ad finem.

Ron moi, tepor et dolor.

Rop, bao rop, quod est obumbratum. Rop nang, radii solis intercepti.

Rot ra, effundere. Rot vao, infundere quod est liquidum.

Rot ruoc, miscere vinum.

Rot, ultimus, a, um. Rot bet, idem.

Rot, roi rot, vide roi.

Rou, draco. Cay xuong rou, lactaria.

Rou, vastus. Rou rai, pecuniae liberalis.

Ru con, demulcere infanatem ut dormiat. Ngoi ru ru, sedere tristis.

Ru, convocando attrahere invicem. Ru, est etiam particula ne, non ne? Con, muon xung toi ru, visne, fili, confiteri?

Ru, chet ru, mori senectute vel ariditate.

RUA, genus testudinis.

RUA, maledicere imprecari. Chui rua, idem.

RUA, dao rua, culter magnus.

Ruc rich; don ruc rich the vay, sic fert fama. Don ruc, idem est.

Rui, rui nha, scandula in tecto domûs.

Rum, cay rum, planta ex cujus flore exprimitur color purpureus. Ao rum, vestis purpurea.

Rum vel ram, species cancri minoris.

Run, tremere. Run so, tremor et timor.
Runæ, de lapsu flororum et foliorum ex arbore. La rung, foliæ decidunt.
Runæ, sylva; deserta loca. Rung xanh, nemus, sylva, saltum.
Runæ cay coi, agitare arbores. Noi rung, verbis terrere.
Runæ mat bloi, ante ortum solis.
Ruoç, obviare; recipere; accercere.
Ruoç, vermis subterraneus qui propè Novembris calendas ex humo prodit, quemque in deliciis habent Annamitæ.
Ruoç, ruoi mat, facies tristis.
Ruoç, arbor quædam.
Ruoç, musca. Cut ruoi, nevus. (Sic; q. nervus?)
Ruoç, xo ruoi, aliquid in sertum ducere.
Ruoç, cicera. Say ruouç, inebriatus cicera seu vino ex oryzâ facto.
Rut chan lai, contrahere pedem.
Rut, cat rut, morsu lacerare.

S.
Sa, cadere. Suong sa, res cadens. Sa con, abortus. Nuoc sa, inundatio aquarum tempore pluviae, montibus ad mare decurrens. Hang ha sa so, multitudo innumerabilis.
Sa, cai sa sa, genus cancri valdè sapidi.
Sæsao, chang sa sao ba nhieu, non curare de re tantillà.
Sæ vao da vao do, intrat húc illuc sine modestià.
Sæ ra, partiri, dividere in partes.
Sac, color. Ngu sac, ngu sac thuoc, coquere medicinam.
Nau sac lai, coquere usque ad siccitatem. Dao sac, cul-
ter benè acutus. Nhan sac, pulchritudo in vulû. Sac
duc, concupiscentia venerea. Sac vel sac chi, edictum,
diploma.
Sæc so, tela multiformis coloris. Sac so, idem.
Sach, liber. So sach, catalogus, nota. Sach Ou Khou,
libri qui Confucii dicuntur.
Sach vel sach se, mudus, a, um (sic); castus. Nhan duc sach
se, virtus castitatis. Giu minh sach se, castitatem servare.
Sai loi, sai mlam, sai lac, ista tria verba significant errare,
aberrare à scopo; agere contra illud quod jussum est.
Sai, mittere. D. C. B. sai thien thanhuyen tin cho D. B.
Maria, Deus misit angelum ad muntiandum Beatae Mariæ.
Phuong sai, commissarius regius. Sai vien, minister
missus. Cay sai qua, arbor onusta fructibus.
Sai, scabies vel morbus parvulorum.
Sai, noi sai, error in loquendo.
Sai, duo brachia extensa, seu ulna. Nuoc sau may sai,
aqua est profunda quot ulnis? Bo sai tay ra, extendere
brachia.
Say, inebriari. Say me nhau, inebriari impuro suipsorum
amore.
Say ra, purgare frumentum ventilando.
Sai, Bonzii, sacrificuli, vel custodes fanorum. Item, senes
qui officium habent parvulos mortuos inhumandi; undè
pueris maledicendo aut increpando dicunt sai quay, id est,
senex ille deferat te ad sepulchrum. Thay sai, magister
et sacrificulus.
Say chien, excutere mattam. Say vay, desquamare pisces.
Say moc ca minh, papulæ oriuntur toto corpore.
Say vel sut da ra, laceratur pellis.
Say, arundines minores et molliores.
Say, *thit say*, caro exsiccata igne.
Say, *say thay*, aliquid excidit è manu. Say chan chua duoc, 
say mieng chang chua duoc, lapsus pedum est reparabils, 
sed lapsus verborum est irreparabils. Sinh say, abortus.
Sam, *rau sam*, portulaca.
Sam, dicitur de avibus que faciliter capiuntur escà.
*Sam nha*, construere ligna jam apta ad structuram domùs. 
Vo sam, tudes magna, quà utuntur fabri in construendà 
domo. Rau sam, barbæ per totum mentum crescentes, 
quales habent Europæi.
Sam, tonitru. Sam set, tonitura et fulmina. Sam truyen 
cu, vetus testamentum; vel *kinh thanh*, scriptura sacra. 
Sam truyen moi, novum testamentum. Sam ki, prophetia 
apud gentiles.
Sam, *sam sam vao*, irrupere in aliquem.
Sam, *so sam*, palpitare et contractare manibus. 
*Sam san*, *Lam cho sam san*, facere diligenter et celeriter. 
Sam et sam sua, comparare, præparare.
San, tabulatum propè terram.
San, *sinh san*, gignere. San hau, morbus muliebris post 
partum. San vat, bona ex fructibus terræ. 
San se, partiri, dividere. San dinh kinh quiem, componere 
multos libros in usum scholasticorum.
San *soc*, sedulus, a, um. Day san, funis fortiter contortus. 
Di san, venari. Cho san, canis venaticus. Quan san, 
venatores.
San, arbor cujus cortice obturantur cymbæ. 
San, paratus, a, um; et in promptu. Con, da san cho duoc 
xung toi ru, fili, jam paratus es ad confitendum? Phai 
sam sua cho san, oportet parare ut sint in promptu.
San, atrium.
San *vao*, vim facere ad intrandum.
San, *san mat ra*, facies impudens.
Sang, transmigrare; transfretare; transire. Do sang, transfundere. Cat sang, transferre. Sang trao, nobilis; nobilitas.

Sang gao, cribrare oryzam. Cai sang, cribrum.

Sang sot, omittere ex oblivione; obliviosus.

Sang, loculus. Co sang, herba quædam.

Sanh, comparare unum ad alterum. Sanh lai, conferre unum cum altero.

Sanh, testa. Phai sanh, offendere testam. Cam sanh, genus mali aurei.

Sao, cai sao, ngoi sao, quare? quomodo? Con, chang muon chua toi ma mu roi linh hom lam sao duoc, fili, non vis abstinere á peccatis, et quomodo salutem consequeris?

Sao ma, con, chang blo lai cu D. C. B. cho kip, quare non vis converti ad Deum celeriter?

Sao, contus. Sao man, pertica quà suspenditur velum.

Sao, fistula. Thoi sao, canere fistulis. Chin sao, avicula quædam.

Sao con ra, fœtum offendere antè tempus.

Sao, vel sao le, sed, verùm, tamen. Sao nguoi, ligna transversa super quibus cubamus in lecto. Sao may, vimen.

Sao van, quoddam instrumentum musicum.

Sap thuyen, tabulatum in cymbis.

Sap, disponere; collocare. Quan cuoc lay doi sap hang, milites per aciem et ordinem dispositi. Sap san, collocare dispositè.

Sap, pronus, a, um. Sap cat, vertere tergum alicui. Con, sap minh xuo ma doc kinh cao minh; thay se giai toi cho con, fili, prosterne te et dic actum contritionis; et dabo tibi absolutionem.
Sap bay xuo, recluditur laqueus seu decipula.
Sat se, idem est ac san se, vide san.
Sat ra vel sat ra, dehiscere, frangi.

Sat, ferrum. Nung sat, coquere ferrum. Cut sat, scoria.
Mot chang an bi cut sat, tinea non potest exedere rubiginem. Dicitur de homine valde avaro et tenax, à quo nihil unquam extorqueri potest.

Sau, sex. Thu sau, sextus, a, um.
Sau, sau bot ra, despumare.

Sau, profundis, a, um. Sau nhiem, vel mau nhiem, mystèrium. Thanh y duc chua bloi sau nhiem vo cung, divina voluntas est inscrutabils. Sau bo, vermis. Cai sau bo cat rut tra trao tri khon, vermis corrodens conscientiàm.

Sau, crocodilus. Giuong sau sanh ra, frontem ferream explicare.

Sau nao, mœor magnus; valdè mœstus.

Se, da se laï, aliquid parumper exsiccatum. Se, chim se, passerculus.

Se, particula affirmans aliquid certissìmè de futuro. Ke co toi trao ma chet, thi se mat linh hon, reus peccati mortalis moritur impœnitens; certè peribit. Mai, con, se den, cras venies, fili. Noi se vay, loqui demissâ voce. Di se se, lentè ambulare.

Se, sou se, vel sou sit, lam sou se, vel sou sit, crudeliter vel crudè agere. An noi sou se, vel sou sit, cruda verba proferre, effutire verba; sine ullà consideratione verba fundere.

Sem, chay sem, semiustus. Com sem, oryza semiusta.

Sen, nymphea. Hoa sen, flores nympheae. Toa sen, sedes
ornata nymphææ floribus, quam idolum Thich ca, promisit suis cultoribus.

Senh phach, senh lem, varia crepitacula, quibus utuntur histriones.

Seo, cicatrix. Seo trau bo, nasus babalorum boumque perforatus.

Set, fulmen. Set danh, fulmen icit. Set danh sen set, sonitus fulminis.

Seu, quædam avis.

Si, arbor quædam.

St, su si, vel su si, asper, a, um.

Si luot nhau, succedere sibi invicem, unus post alterum.

St, tien si, doctor.

Siæc, so siæc, timere.

Siæng nang, diligens, impiger; diligenter. Nang nan, idem est.

Siæt, terere aliquid moliendo.

Siæm, cææm, myrtus.

So sanh, comparare, conferre.

So, calvaria. So, mytilus. So, caput. So con, so trau, de bestis dicitur.

So phan, fatum. So he, idem. Xem so, sortilegium inquirere. Doi so, sortem mutare. Do so, numerus graduum astronomicorum.

So sach, vide sach net so, ductus penicelli desursùm descendens. So ten, vel so chu di, obliteratio nominis aut scripturae. Cua so, fenestrae. So ra, disrupere, dissolvere aliquid colligatum. So tren bloi, iris in caelo.

So mo, so sam, vide sam. Doi so, vel doi xua, antiquiore tempore.
So, palpitare ex cæcitate.
So, *cay so*, quedam arbor. So cai, milites super populis praepositi ad colligenda vectigalia.
So, timere, metuere, formidare. Ke so hai lam, metu perculsus.
*Soan lai*, revisere, recensere, aut recognoscere aliquas res.
*Soat*, colligere vectigalia qua defuerant ex superioribus annis. Khach soat, tributarii.
*Soc ruo*, spatium certum agrorum.
Soi, fervere. Bien soi, mare turbidum. Lam soi len, qui alios nimium urget et quasi fervere facit.
*Soi tran*, idem est ac *soc tran*, vide *soc*. Cho soi, vide *cho*. 
Soi, lapilli. Dat soi, terra petrosa.
Soi, vel *soi nao*, ad exprimendum quod adhuc à fine longè distat; et sic solet dici: Soi nao chua mui gi, adhuc longè est finis; nullà ex parte evacuatur opus.
*Soi chi*, filum.
Soi, morbilli. *Nen soi*, laborare morbillis.
Khi con som lam chua sung, multò antè lucis adventum. 
*Som nguoi hon som cua*, multitudo hominum melior est multitudine divitiarum. Giau som, valdè dives.
*Som lai*, macie confectus; macerrimus.
Soox, minium. Giam son, acetum forte. Dan ba son, mu-
lier non maritata vel sterilis. Vo chou con son se, novi sponsi filium nondùm habentes.

Son son, sinh de son son, mulier sæpissimè filios pariens.

Son, sandaracha. Son hom, sandarachà capsulas obtegere.

Lo son, sandarachæ vapore infectus.

Son lao, relaxatur animus. Ao da son ra, vestis vetustate sublacera.

Son so, exhilaescere. Son gay len, horrent capilli.

Son, cista rara ad capiendum aliquid.

Son, calor; calidus, a, um. Sot ret, febris. Sot ruot, ardens animus; inquietus animo. Sot tinh, ar dens in cupiditatis. Sot buc, ardor solis. Chang co sot, nihil omninò. Dat sot lam, terra exusta solis ardoribus.

Son, aliquid superest ex oblivione. Sang sot, vide sang.

Sou, fluvius. Sou van ha, via lactea.

Sou, vivere; vivus, a, um; vita; crudus, a, um. Sou dois doi, vita æterna. Ga sou, gallus. Thit sou, caro cruda.

Su su, hirsutus, a, um. Dau su su ra, caput hirsutum.

Su, ca su, coracinus piscis.

Su, magister. Tien su, adinventor cujuslibet artis, qui pro deo a gentilibus colitur. Dom tien su, le tien su, sacrificare illis diis adinventoribus artium. Ton su, venerandi magistri. Sic etiam vocantur sacerdotes ecclesiæ. Su tu, leo.

Su vel viec, res immaterialia vel negotia. Sic etiam possunt dici omnia nomina quæ a verbis fiunt; ut su an, comestio; su noi, locutio; su o nhung, otium. Chang su gi den may, nihil ad te pertinet. Res vero materiales vocantur do le, cua cai, san vat. Thou su, interpres. Dan su, populus.
Su, historia. Su ki, historici. Sach su, libri historici Sinesis. Quan ngu su, mandarini ex supremo senatū.
Sua, latrare. Mieng hum sua, omnis vis virtusque ejus in linguā sua est.
Sua sang, disponere; moderari. Sua phat, corrigere. Sua tri, regere.
Sua, lac. Banh sua bo, caseus.
Suc, abluerē vasa. Luc suc, sex species animalium, scilicet, elephas, equus, ovis, canis, gallina. Sed nunc etiam sumitur communitur pro omnibus animalibus ista vox lūc suc. Suc go, lignum enorme; lignum rude.
Suy, cogitare, meditari. Suy di ng hi laï, cogitare iterūm atque iterūm. Suy den su thuong kho D. C. J., cogitare de passione Christī.
Sui, caelefacere se.
Sum hop, congregare se; congregatim habitare. Sum nhau vao, idem.
Sun lai, fructus contrahunctur, vel pellis contracta.
Sun rang, exesi dentes.
Sung suōng, voluptas, voluptuosē. Cay sung, arbor quēdam.
Sung, catapulta. Sung tru, sclopetā major, tormentum bellicum. Sung trung xa, sung het, sung trang ma, dai pha qua son, varia sunt tormentorum bellicorum genera.
Sung, khām sung, kinh xuo, venerari, amare. Sung su dao, diligens in fide, fervens Dei cultor. Sung phat, addictus idolis.
Sung vel thung, perforatus, a, um. Noi thung, olla perforata. Thung thung, cista pertusa. Sung sung, strepitus in loco aquarum profundo.
Sung, inflari; vel phu, idem. Ca va misung len, vel phu len, totum corpus inflatur, tumescit.
Sung, cornua boum. Sung sung, dung sung, sung giua dung, stat immotus et enormis in medio vie. 
Suoi, khe suoi, rivulus, fons. 
Suon, vel canh suon, latus. Xuo suon, costae. 
Suong, ros. Hat suong, guttula roris. Suong muoi, ros malignus. 
Suong, vide sung. 
Suot luat, evellere grana ex spicis. 
Sut vel sut, dilabi. Dat sut xuo, terra dilapsa in profundum. 
Sut da ra, laceratur pellis. Say sut, idem. Vel sut so, etiam. 

T. 
Ta, vel chung ta, nos. Sic superiores ad inferiorem; sed inferiores ad superiorem, semper chung toi. 
Ta, injuriam illatam superiori aut etiam æqualibus reparare. 
Ta on, gratias agere superiori aut Deo. 
Ta vao, ma ta vao no, dæmon intravit in illum. Toi ta, servus. Lam toi ta, servire. 
Ta, perversus, inordinatus. Ta ma, ta than, dæmones. 
Dao la, religio perversa. Ta dam, fornicatio. Gian ta, iniquus. 
Ta huu vel mat trai, sinister, a, um; dexter a, um. Benh ta, fluxus ventris. Quan ta dao, latrones. 
Tac tuong tac hinh, insculpere simulacrum. 
Tac, decima pars in cubito. 

*Tai mat*, pallor in facie.

TAI, a, ex; propter, circa. Boi tai, idem est. Su nay boi tae ta ma ra, istud provenit ex peccatis nostris. Toi ph ke cuop tai noi ay, incidi in latrones circa illum locum, vel propter illum locum.

TAI, manus. Canh tay, brachia.

TAI, æqualis; æqualiter.

TAI, purgare se. Thuoc tay, purga.

TAI, *vo tam tinh*, homo non attendens ad sua negotia.

TAI, *cho tam tien*, mutuo dare pecuniam. Tam bo, lam tam vay, aliquid facere pro brevi tempore. Tam te, ædícula ad tempus constructa, ubi collocantur cibaria magnificæ facta ad sacrificandum suis mortuis.

TAI, octo. Thu tam, octavus, a, um.

TAI, dentis calpium, vel spumæ ex immersione alicujus rei in aquam; unde dicitur; Chang thay tam dang gi sot, nulla umbra, nullum vestigium appareit. Toi tam, obscuritas magna. Ruou tam, sicera fortissima, spiritus vini.

TAI, lavare corpus totum.

TAI, bombyx. Ngo chan tam, ars serica producendi.

TAI, frustum, particula.

Tam thuoc, temperare medicinam. Tam tuc, gliscit animus.

per situlam, dicitur *kin*. Mang nhu tat nuoc, acriter et multum increpare.

*Tat gio*, cessat ventus.

*Tat*, vel *tat nguyen*, languor.

*Tat*, vel *bit tat*, tibiale; ocreæ.

*Tau tanh*, emere res magni pretii, quales sunt naves, agri, vaccae, equi.

*Tau vel tau*, alloqui vel appellare regem. *Tau duc tua* muon muon nam, vivat rex ad mille annos.

*Te*, genus retis.

*Te*, movere.

*Te*, tedium. Khi vui, khi te, modò gaudium, modò tedium. 

Com te, oryza ordinaria.

*Te chan*, stupent vel tepescunt pedes. Te moi, tepor et dolor.

*Te*, secare aliquid aequaliter.

*Tem blan*, parate betel.

*Ten*, pudorem pati ex repulsâ.

Tha ra, solvere animal ligatum. Thao tha, otiu fruens, libertate gaudens; immunis ab omni labore et dolore.
Thac ra, vel thac co ra, calumniam struere.
Thach nhau, provocare invicem ad certamen.
Thai cuc, aër aut principium quoddam à quo omnia creata esse credunt litterati Sinenses. Thai rau, secare olera.
Thai ra, res veteres abdicare.
Thay, cadaver; per contemptum. Thay no, relinquatur ad nutum ejus.

Tien khach, excipere hospites.
Tiep, carina. Tiep vao, adjungere.
Tiët, sanguis.
Tim, blai tim, cor. Tim la, morbus venereus.
Tim mau, livor.
Tim, quaerere. Tim toi, idem est.
Tinh, thanh tinh, castus, a, um; castitas. Tinh trai, jejunium naturale. Tinh khou, parum, nihil.
Tinh, natura, substantia. Tinh gia, lex naturalis. Tinh net, indoles, propensio. Tinh lai, vel tinh loan lai, ad calculum revocare. Toi tinh the nay, sic puto. Ng tinh me net xau, vir ingenio malo pravoque.
Tinh, affectus cordis. Vo tinh, sine attentione. Tinh co, vide co.
Tinh, sanus, compos mentis. Tinh lai, redire ad se, animum revocare ad se.
Tit, callum parvum. No co tit trao minh, habet callum in corpore; aut conscius sibi alicuius sceleris.
45
Tit, be tit, vel nho tit, minimus, a, um.
Tiu, tuc tiu, verba obscena.
To, crassus, grassus, a, um; grandis, e.
To te, sciolus.
To, et to tuong, clarus, a, um; clarè; clarificare; prodere; clarè scire. Noi lai cho to, repetere clarè. Cu, da nghe to chua, jam ne clarè audiisti, pater. Viec ay toi da to, illud negotium jam clarè scio.
To lo, publicè, manifestè. Con dou, con to, tempestas levis.
To, nidus. To tou, progenitores. Cai Thanh to tou, sancti Patriarchæ.
To, sericum ex quo fiunt fila. Keo to, producere fita serica.
Giou to, omnia quæ fiunt ex serico.
To, to ray, ferè similis, e.
To vel tao, vide tao. May tao, tu, ego. Nguoï to, idem.
Sunt voces superborum et iratorum. Day to, discipulus, famulus.
To giay, folium papyri, scriptum. Guio to, mittere scripturn. Len to, scriptum conficere.
Toa, giao toa, causidicus versipellis et vafer.
Toa, thronus; tribunal.
Toa, la toa, pulvinar ephippii.
Toai, bat toai, paralyticus.
Toan, deliberare; decernere; aggregi; parare. Ao toan keu, parabat acclamare.
Toan, arithmetica; computare. Con toan, calculi. Ha con toan, bo con toan, calculos ponere.
Toc, capillus. De tang, vel de toc cho cha me, pullà veste indui causâ luctûs; habitum lugubre induere pro honore parentum mortuorum.
Toc, tui toc, statim, cæleriter.
Toi, pestis animalium, luces.
Toi, vinculum, catena. Loi toi, idem.
Toi, allium.
Tor, ego; meus, a, um. Cua toi, res mea. Chung toi, nos, noster, a, um. Toi ta, servus; ancilla.

Toi, peccatum; pæna; reatus. Pham toi, peccare. Chiu toi, pænam luere. Phep giai toi, sacramentum pæniten-tiae vel absolutio sacramentalis. Xung toi, confiteri pec-
cata. Den toi, satisfacere pro peccatis. Noi giai toi, 
purgatorium. Toa giai toi, confessionale. Thang rat ke co toi, homo omnium quos terra sustinet sceleratissimus.

Toi, obscurus, a, um; obscuritas, nox. Dem toi tam, nox obscurissima. Toi da, obscurum ingenium, homo parvae 
memorie.

Toi tan, labefactus, a, um; desolatus; lapsus in ruinam.

Toi, ao toi, pluviale.

Toi, venire. O dau ma toi, undé venis? Buoc toi len, pro-
gredi. Toi len, progredi, regredi.

Tom, comprehendere. Tom ve vel tom lai, comprehendere 
ad. Muoi den ran D. C. B. tom ve hai su nay, decem 
mandata Dei ad haec duo comprehenduntur.

Tom, locusta marina.

Ton kinh, honorare. Ton su, reverendus magister seu 
sacerdos.

Ton, expendere. Lam ton cua, prodigus.

Ton, du ton, crudelis; crudeliter.

Ton tac, pavidos, a, um; trepidè huc illuc cursitare.

Tang, contignatio. Tang bloi, gradus caelorum.

Tang len lam quan, provehere ad dignitates. Bong tang, 
aurora.

Top mo, adeps decocta et expressa. Nguoi ra tung top, 
turmatim sedere.

Top lay, ore celeriter rapere.

Tot ra, citò foras elabi vel effugere. Tot truoc, fugere. Bo 
tot, unicornius.

Tor, bonus, a, um. Tot lanh, formosus, a, um. Tot xinh, 
idem.

Tou chi vel to tou, progenies; progenitores. Tou do, dis-
cipuli.
Tou, deducere; comitari; adjudicare.
Tou, toparchia. Truong tou, procurator publicus in toparchiā. Tou co, signifer.

Tra vao, promittere. Tra hoi, inquirere juridicē, interrogare. Quanh thanh tra, inquisitores. Tra do an, temperare cibaria.

TRA, man tra, vel doi tra, fallax, mendax. 
Tra lua, ejusdem classis, occasionis. 
Tra vel blu, reddere, restituere.
TRA, genus ollæ fictilis.
TRAC, crepitaculum.
TRACH, vel trach moc, conqueri. Trach vi su loi, delicta reprehendere.
TRAJ, ostrea. Con trai, vel con blai, puer. Trai gai, pec-catum luxuriae.

Trai, villa. Trai chau, vel tuo chau, lapsus pedum; ferē labi, ferē lapsus est.
TRAI, perverso modo. Tay trai, manus sinistra. Trai vel blai, fructus.

Trai vel blai chieu, explicare mattas. Da tra moi su, expe-rientiā omnium rerum doctus.

Tray lay vel blay lai, legere flores aut fructus.
Tra vao vel blay vao, respergere sordes aut vicem vesti-bus, aut aliis rebus.

TRAY, proficisci. Chuyen tray, prefectio.

Tray tro, quod difficilè fit.

TRAM, pix, bitumen.

TRAM, mot tram, centum. Tram lan, centies.

TRAM, piscis, quidam. Tram, in aures.

TRAN, certamen. Duoc tran, vincere. Thua, vel thoi tran, vinci.

Tran chau, gemmae.

TRAN, regere, moderari. Quan tran, gubernator provinciæ.
TRAN, nudus, a, um; sine veste. Tran truo, nudus absque ullo velamine.
Tran trut, fugere laborem.
Tran, frons. Soi tran, calvus.
Tran vel blan ra, exundare. Toi ng ta da blan kap dat, peccatum hominum jam exundat per totum orbem.
Tran, coluber.
Tran, dai tran, parva pocula quibis utuntur gentiles in suis sacrificiis.
Trang vel blang, pagina. Nghiem trang, majestuosus.
Trang nguyen, supremus gradus litteratorum.
Trang hoa, serta florum.
Trang vel blang, luna.
Trang, albus, a, um.
Trang, go trang, lignum durissimum. Nguoï tro trang, homo durus, impudens. Tro trao, idem.
Tranh ve, tabula picta. Tranh, vel blanh lop nha, paleæ contextæ quibus teguntur domus. Tranh nhau, æmulari invicem.
Tranh, genus testudinis.
Tranh, decedere via aut paulisper declinare. Tranh trut, vel tran trut, vide tran trut.
Trao cho, tradere, præbere.
Trao ra, ebullire.
Trao, inter, intra; inter vos. Trao chung bay, intra arcam.
Traf, incunabula. Traf, laqueus.
Trap vel blap, aqua agitata exílit è vase.
Trap com, aliiquid oryzae calidæ superponere, ut calefiat.
Trap tai, canis depressæ auriculæ.

Trat, oblincere parietem.

Trat, an trat, manducare grana dente frangendo. Trat, occasio, tempus.

Trau, bubalus.

Trau, pellicula oryzæ.

Trau vel blau, betel. Tem blau, vide tem.

Tre, arundo indica. Tre pheo, idem. Bui tre, arundinetum.

Tre, vel tre mo, pueri, puellæ. Tuoi tre, adolescentia, juvenus. Con tre, teneris adhucannis, adhuc esse juvenis.

Tre nai, desidiosus; vide tre trang. Tre ao xuo, vestis ab humero pendens.

Treach ra, aliquid paulisper excedens è suo loco.

Trem moi, lambere labia.

Trem, chay trem mot chut, aliquid modicè semiustum.

Tren, superior; supra, super. Be tren, Deus; rex; superior. Tren bloi, in cclo. Tren rung, in sylvis.

Treö, suspendere aliquid fune.

Treö, ghe treo, sedes plicabilis.

Treö, conscedere arbores.

Treu gheo, molestare, inquietare.

Tret vel giet lo, obturare foramen.

Tri, regere, imperare.

Trich, ca trich, immotus.

Treö, decem milliones.

Treö than vel quan treu, curia, supremi consules. Mun trieu thien, corona regis.

Triet di, delere.

Tro vel blo, cinis.

TRO, indicare.

*TRO cua vel blo cua*, portam facere.

*TRO trao, homo perfrictæ frontis.

*TRO thi*, pro circumstantiā et instantiā temporis; ad tempus aliquid factum.

*Troc vel bloc da ra*, evellitur pellis.

*Troc dau vel troi dau*, obtosnum caput.

*Troc vel bloc di*, convellitur arbor tempestate.

*Troir, cai troi*, cista rara ad capiendas ollas. Troi, ligare reum, vincire.

*Troi di*, ferri aquarium impulsû. Ca troi, quidam piscis.

Qua troi, fructus quidam. Ma troi, igniculi nocte apparentes.

*Troi len* vel *bloi*, emergere, eminere.

Chua cua ke trom, custodire res furto ablatas.

*Trox*, rotundus, a, um.

*Tron* vel *blon*, integer, a, um; perfectus; absolutus, a, um. perfecte.

*Tron*, vertere et revertere acetarium.

*Tron*, fugere. Tron tranh, idem.

*Tron*, lubricus, a, um; labilis. Dang tron, via luto lubrica.

*Tron trung mat len*, micant oculi deductis superciliis.

*Trot* vel *blot*, integer, a, um; totus, a, um. Lam viec blot ngay, laborare totâ die. Trot, aliquandô est vox excusantsis se, ut: Toi da trot lam, xin anh tha cho, jam erravi, peto à te veniam. Su da trot, quod ex errore peractum est.
Trou doi, expectare. Trou cay, sperare, spem in aliquo ponere. Bo lao trou cay, despondere animo.

Tru, o tam tru, hospitari per aliquot dies. Tru tri, morari, morosus.

Tru, expellere; amandare. Tru qui, expellere daemonem ex energumenis.

Tru, vel tich tru, conservare, asservare in futurum usum. Tru duong, conservare, favere alicui. Tru duong dao kiep, protegere latrones.

Trua, da trua, si dicatur manè, sensus est: jam est tardè; ut: Hom nay ta thuc day da trua, hodiè surreximus tardè. Si verò propè meridiem est sermo; tunc verò serè meridies est. Bua trua, vel an com trua, prandium. Truc trac, vox non apta ad orationis connectionem. Non est porpolia oratio. (Sic in MS.)

Truc tinh, natura fervida, zelosa. Truc doi, expectare, assistere, astare ut in promptu sit.

Trui, idem est ac troc troi, vide troc.

Trui vat, lactatores qui caput suum obtundent.

Truy tam, quærere, investigare.

Truyen, historia, confabulatio.

TRUM, ou trum, vel lam trum, caput esse in aliqûa societate, pago, confraternitate. Trum ca minh, coöperire totum corpus.

TRUM, genus cistæ ad capiendos pisciculos, et locustas aquaticas.

TRUM, non trum, galerus concavus.

Trun vel blun, lumbricus.

Trung phao, captus malignâ aurâ aut aliqûa aliâ infirmitate.

Trung, trung diep diep, numerus innumerabilis. Trung danh trung hieus, similis titudo nominis.

Trung vel sung, vallis, loca demissiora.

Truo, major. Truong nam, primogenitus. Truong tou, major seu procurator in toparchia. Xa truong, vel truong toc, pater familias; familieae princeps.

Truong, pho truong, vide pho.

Truong don, infligere verbera; cædere fuste vel verberibus. Mot truong, mensura decem cubitorum.

Truo, vide tran.

Trut ra, diffugere. Trut ao ra, exuere se veste.

Tu, congregare se; concrescere. Vide guan tu.

Tu, nhieu tu, sic vocantur filii privilegiati ex dignitate aut merito patris. Ou nhieu ou tu, idem.

Tu rac, vel tu nguc, carcer. Tu chan, pedes coercendo aut sedendo dià in uno loco fatigantur.

Tu vel phu, coöperire aliquid paleis.

Tu, quattuor, quartus, a, um. Muoi tu, quatuordecim. Thu tu, quartus, a, um, vel feria quarta. Tu thien, scientia mathematica. Quan tu thien, magistratus mathematici, quorum est conficere calendaria.

Tu, y tu, intentio; res intenta. Nguoi co y co tu, homo benè attentus ad sua opera.

Tu, à, ab, ex. Tu nha toi den day, è domo meà hùc usque. Tu con xung toi lan truoc den ray, duoc may thang nay, fili, ex quo fecisti ultimam confessionem usquemodo, quot menses effluxerunt? Tu D. C. J. ra doi, à Christianâ salute, vel à Christi nativitate, vel à Christo nato. Tu bao gio, à quo tempore. Tu nay ve sau, con ph ra suc lanh cac dip toi, ex hoc in posterum debes, fili, vitare omnes occasiones peccandi. Tu con, abdicare filium. Chang nen tu con trai mle, non licet contra rationem abdicare à se filium.

Tu, vox Sinico Annamitica duas significationes habens, mortis aut filii. Unde cum dicitur sinh tu, id est, vita et mors. Tu vi dao, mortuus vel mortua pro religione, seu martyris. The tu, uxor et liberi. De tu, famuli, discipuli. Quan tu, philosophus vel scientiis celeberrimus; sapiens.

Tu, thu tu, vide thu. Tu nhien, dao tu nhien, lex naturae. Tinh tu nhien, natura. Nguoi nhien biet yen men cha me, homines à naturâ sicut parentes esse amandos. Nguoi tu nhien hay noi, homo à naturâ suâ seu ex seipso loquax.

Tua, radius. Sao tua, stella caudata.

Tua sach, præfatio libri.
Tuc, *thoi tuc*, mos, consuetudo. Xuat giang tuy tuy khuc, nhap gia tuy tuc, cum Romae fueris, Romano vivito more. Noi tuc, vorax.

Tuc, *chuot tuc*, vox muri propria.

Toi, saccus, crumena.

*Tui than* vel *tui ho*, pudore et confusione plenus.

*Tuy rang*, etiam si licet.

Tuy, sequi, conformare se mori. Tuy tuc, sequi morem. Tuy ma cai minh, pro opibus. Tuy suc, pro viribus.

*Tuyen*, integer, a, um; totus, a, um. Lang nay da co dao tuyen, iste pagus jam factus est Christianus totus. Tuyen nien, toto anno. Tuyet, nix.

Tuoi, annus ætatis. Tuoi tac, senex. Da co tuoi, accedere ad senectutem. Xem tuoi, vana observantia annorum ætatis.

Tuoi, viridis, recens. Ca tuoi, piscis recens. Chet tuoi, mors subitanea.

Tuoi, rigare.

Tuon vao, confluere.

Tu, *pha tuo ra*, perfringere, destruere.

Tuong, condimentum ex fabis factum.

Tuong, statua, simulachrum.

Tuong, dux. Thuong tuong, supremus seu maximus dux. Dai tuong, magnus dux. Ta tuo, pho tuo, dux ad sinistrum cornu. Co tuo hieu, vexillum ducis ad commonendum.
